core narratives of supporters and opponents of surrogacy in order to understand this reproductive practice in light of some of the essential elements of contemporary societies such as the child at any cost culture individualism technology and female emancipation This book appeals to scholars policy makers and all those who want to understand the controversial debate on this unprecedented method of family formation and life production Femicide, Gender and Violence Daniela

Bandelli,2017-03-21 This book questions gendered readings of violence by analyzing how this paradigm has become normalized in Italy since the feminist term femminicidio or femicide entered the mainstream media during the 2013 general election It also sheds light on discourses of contestation on the part of family activists men s rights campaigners and divorced fathers groups Two counter discourses emerge The first is what the author terms an ideology narrative for which discourses built around the conceptual category of gender normalize simplistic representations of relationships between men and women The second is a female violence discourse which sheds light on under represented aggressor victim relations and modifies dominant representations of femininity and masculinity The author argues that integrating these two discourses into public debates helps to reappropriate the complexity and biological dimensions of violent relationships between men and women often overshadowed by gender feminist perspectives In this way she concludes we can address neglected social issues that contribute to violence beyond gender This thought provoking book will appeal to students and scholars of sociology critical discourse studies and gender *Nature, Not Human Activity, Rules the Climate* Siegfried Fred

Singer,2008 This is the Policymakers Summary of the Nongovernmental International Panel on Climate Change NIPCC an international coalition of scientists convened to provide an independent examination of the evidence available on the causes and consequences of climate change in the published peer reviewed literature examined without bias and selectivity It includes many research papers ignored by the Intergovernmental Panel on Climate Change IPCC plus additional scientific results that became available after the IPCC deadline of May 2006 The IPCC is pre programmed to produce reports to support the hypotheses of anthropogenic warming and the control of greenhouse gases as envisioned in the Global Climate Treaty The 1990 IPCC Summary completely ignored satellite data since they showed no warming The 1995 IPCC report was notorious for the significant alterations made to the text after it was approved by the scientists in order to convey the impression of a human influence The 2001 IPCC report claimed the twentieth century showed unusual warming based on the now discredited hockey stick graph The latest IPCC report published in 2007 completely devaluates the climate contributions from changes in solar activity which are likely to dominate any human influence **Encyclopedia of Global Warming and Climate Change, Second Edition** S. George Philander,2012-06-13 The First Edition of the Encyclopedia of Global Warming and Climate Change provided a multi authored academic yet non technical resource for students and teachers to understand the importance of global warming to appreciate the effects of human activity and greenhouse gases around the world and to learn the history of climate change and the research enterprise examining it This edition was well received with notable

reviews Since its publication the debate over the advent of global warming at least partially brought on by human enterprise has continued to ebb and flow depending literally on the weather politics and media coverage of climate summits and debates Advances in research also change the discourse as new data is collected and new scientific projects continue to explore and explain global warming and climate change Thus a new Second Edition updates more than half of the original entries and adds new perspectives and content to keep students and researchers up to date in a field that has proven provocatively lively

**The Environmental Documentary** John A. Duvall, 2017-05-18 The Environmental Documentary provides the first extensive coverage of the most important environmental films of the decade including their approach to their topics and their impacts on public opinion and political debate While documentaries with themes of environmental activism date back at least to Pare Lorenz's films of the 1930s no previous decade has produced the number and quality of films that engage environmental issues from an activist viewpoint The convergence of high profile issues like climate change fossil fuel depletion animal abuse and corporate malfeasance has combined with the miniaturization of high quality recording equipment and the expansion of documentary programming to produce an unprecedented number of important and influential documentary productions The text examines the processes of production and distribution that have produced this explosion in documentaries The films range from a high profile Hollywood production with theatrical distribution like *An Inconvenient Truth* to shorter independently produced films like *The End of Suburbia* that have reached a small audience of activists through video distribution interviews with many of the filmmakers and word of mouth

**Behind the Curve** Joshua P. Howe, 2014-04-01 In 1958 Charles David Keeling began measuring the concentration of carbon dioxide in the earth's atmosphere at the Mauna Loa Observatory in Hawaii His project kicked off a half century of research that has expanded our knowledge of climate change Despite more than fifty years of research however our global society has yet to find real solutions to the problem of global warming Why In *Behind the Curve* Joshua Howe attempts to answer this question He explores the history of global warming from its roots as a scientific curiosity to its place at the center of international environmental politics The book follows the story of rising CO<sub>2</sub> illustrated by the now famous Keeling Curve through a number of historical contexts highlighting the relationships among scientists environmentalists and politicians as those relationships changed over time The nature of the problem itself Howe explains has privileged scientists as the primary spokespeople for the global climate But while the science first forms of advocacy they developed to fight global warming produced more and better science the primacy of science in global warming politics has failed to produce meaningful results In fact an often exclusive focus on science has left advocates for change vulnerable to political opposition and has limited much of the discussion to debates about the science itself As a result while we know much more about global warming than we did fifty years ago CO<sub>2</sub> continues to rise In 1958 Keeling first measured CO<sub>2</sub> at around 315 parts per million by 2013 global CO<sub>2</sub> had soared to 400 ppm The problem is not getting better it's getting worse *Behind the Curve* offers a critical and

levelheaded look at how we got here      Getting the Climate Science Facts Right Medani P. Bhandari,2022-09-01 Getting the Climate Science Facts Right discusses climate change science with reference to the Intergovernmental Panel on Climate Change IPCC Addressing climate change is the most important public priority of the 21st Century Unlike many issues however this issue is being driven by both science and its interface with politics The main institution for bridging this division between science and international politics is the IPCC As such it is the main source of the facts from which climate change policy is developed This book describes the ways in which the IPCC arrives at these facts and so can be sure they are complete and evidence based Seldom in history has science had such a direct relationship with politics The negotiation of an international policy regime requires at its outset an agreement on the facts In this case the facts are scientific complex and contentious Governments have recognized this and have by using the IPCC set up institutional machinery to provide facts from a source and in a manner that they can accept The way in which the IPCC functions is unique in that it melds the way in which science achieves consensus with the way governments do at the international level Starting with a process to examine review and debate scientific findings leading to a consensus about scientific fact usually expressed as probabilities that the findings will hold over time the IPCC then concludes by using the kind of consensus development mechanism that the United Nations typically uses to achieve agreements leading to the formation of policy regimes The book examines the structure of the IPCC its composition and its procedures in order to achieve an understanding of its role and future      **The Political Economy of the Low-Carbon Transition** Peadar Kirby,Tadhg O'Mahony,2017-10-26 This book addresses the global need to transition to a low carbon society and economy by 2050 The authors interrogate the dominant frames used for understanding this challenge and the predominant policy approaches for achieving it Highlighting the techno optimism that informs our current understanding and policy options Kirby and O Mahony draw on the lessons of international development to situate the transition within a political economy framework Assisted by thinking on future scenarios they critically examine the range of pathways being implemented by both developed and developing countries identifying the prevailing forms of climate capitalism led by technology Based on evidence that this is inadequate to achieve a low carbon and sustainable society the authors identify an alternative approach This advance emerges from community initiatives discussions on postcapitalism and debates about wellbeing and degrowth The re positioning of society and environment at the core of development can be labelled ecosocialism a concept which must be tempered against the conditions created by Trumpism and Brexit      Current Controversies in Political Philosophy Thom Brooks,2015-07-03 Current Controversies in Political Philosophy brings together an international team of leading philosophers to explore and debate four key and dynamic issues in the field in an accessible way Should we all be cosmopolitans Gillian Brock and Cara Nine Are rights important Rowan Cruft and Sonu Bedi Is sexual objectification wrong and if so why Lina Papadaki and Scott Anderson What to do about climate change Alexa Zellentin and Thom Brooks These questions are the focus of intense debate Preliminary chapter descriptions bibliographies following each

**The Approaching Great Transformation** Joel Magnuson, 2013-07-17 Joel Magnuson's visionary insights into the decline of the Oil Age and life afterward combine sobering warnings with genuine hope. The facts are hard: global oil deposits will soon peak if they haven't already, and the violent race to secure what's left has already begun. Meanwhile, our culture of consumption continues its heedless dependence on this and other scarce and fast-disappearing resources, including other fossil fuels, water, topsoil, and basic metals. The consequences won't just be expensive gasoline. The very nature of life as we've come to know it will change, and Magnuson explains how compounding factors like global warming, skyrocketing debt, and ill-prepared governments stand to turn this inevitable change into a needless catastrophe. But the hope is real: individuals and communities around the world have already begun taking action to shift away from consumer culture. Drawing on the visionary work of E. F. Schumacher, John Ruskin, and other pioneering thinkers, Magnuson argues that mindful and concerted action can shape the future. With an emphasis on current transitional projects like B Corporations and LETS projects, he shows that the true great transformation is already underway, and it's up to us to continue it. With a foreword by Helena Norberg-Hodge, founder and director of the International Society for Ecology and Culture (ISEC).

**Science and Anthropology in a Post-Truth World** H. Sidky, 2020-11-12 At the end of 2019, Americans were living in an era of post-truth characterized by fake news, weaponized lies, alternative facts, conspiracy theories, magical thinking, and irrationalism. While many complex, interconnected factors were at work, this post-truth era was partly the culmination of a cadre of anthropologists and other academics in American universities and colleges during the 1980s and 1990s. In *Science and Anthropology in a Post-Truth World*, H. Sidky examines how their untoward dalliance with problematic and dangerous ideas by Michel Foucault, Jacques Derrida, Jean-François Lyotard, Bruno Latour, and Jean Baudrillard informed and empowered a forceful assault on science and truth in the following decades by corporate organizations, politicians, religious extremists, and right-wing populists.

Newton, 2014-04-21 A shrewd and compelling examination of how political figures throughout history have used scientific findings to achieve their objectives just as scientists have often put political forces to work to achieve their own goals The U S government has historically been the engine of American scientific achievement from the birth of nuclear technology to the space race However at times our government has also misrepresented scientific evidence to advance a political agenda Science and Political Controversy A Reference Handbook examines how the government has facilitated research for the public good and the ways in which politicians have manipulated data to serve political ends around a broad array of controversies from stem cell research to energy development chemical health risks and climate change Written specifically for high school students and general readers without specialized background knowledge on the subject the work presents perspective essays authored by representatives from governmental agencies politicians political scientists experts in the physical and life sciences and other stakeholders concerned with the intersection of politics and science The first section of the book provides background information on the topic that overviews the current problems and issues related to the interaction of science and politics The second section supplies resources that readers can use for their own research such as an annotated bibliography profiles of important individuals and organizations a chronology of important events and a glossary of key terms
