Interdisciplinarity in World History Ahmed Abushouk, Mahjoob Zweiri, 2016-06-22 This book represents selected papers of an international conference convened by the Department of Humanities at Qatar University Doha in March 2013 Its theme was Interdisciplinarity in History An Old Method in New World Context Twelve out of the fifty papers presented at the conference have been thoroughly reviewed revised and compiled in this volume Their contributions emphasize that interdisciplinarity in history has become a key term for professional historians who reject the professional identity of history based on its claimed autonomy and the distinctiveness of its research methods and argue that this claim has seriously narrowed the intellectual horizons of the discipline in terms of both teaching and research The chapters also stress that historical research should not be confined to political events as it was by ancient historians but rather be open to other complex issues which require thorough investigation and collaboration between history and other disciplines In this sense interdisciplinarity in history is a process of answering questions solving problems or examining topics that are too broad or multifaceted to be tackled adequately by history as a discipline on its own Therefore history should not be regarded as a stationary subject as Robinson wrote but as a discipline that would transcend the limitations formerly imposed upon the study of the past and integrate with other social science disciplines to widen its methodological scope and investigate many issues that had previously ignored or marginalized Tourism and Global Environmental Change Stefan Gössling, Michael C.

Hall, 2006-06-07 This fascinating book is the first comprehensive analysis of the economic social and political interrelationships between tourism and global environmental change one of the most significant issues facing humankind today Its contributors argue that the impacts of these changes are potentially extremely serious both for the tourism industry and for the communities dependent upon it Integrating knowledge from the social and physical sciences this significant book

explores the key issues surrounding global environmental change as well as government and industry willingness to meet the challenges posed by it. Divided into four main sections it investigates the tourism and global environmental change relationship in specific environments, global issues related to environmental change, differing perceptions of global environmental change held by tourists and the tourist industry. Comprehensive in scope, topical and integrative, this key text is essential reading for students, scholars and researchers in all aspects of tourism, geography and environmental studies.

Globalization, Environmental Change, and Social History Peter Boomgaard, Marjolien 't Hart, 2011-02-24. Throughout all ages the activities of mankind have weighed heavily upon the environment. In turn, changes in that environment have favoured the rise of certain social groups and limited the actions of others. Despite this, environmental history has remained a blind spot for most social and economic historians. This is to be regretted as the various and unequal effects of environmental change often explain the strengths and weaknesses of certain social groups irrespective of their being defined along the lines of class, gender and ethnicity. This volume brings together the expertise of social and environmental historians in an effort to assess the extent to which transnational agents changed socioecological space as a consequence of globalization since the Late Middle Ages.

The Oxford Handbook of Environmental History Andrew C. Isenberg, 2017. The Oxford Handbook of Environmental History draws on a wealth of new scholarship to offer diverse perspectives on the state of the field.

Those already familiar with the discipline will find themselves invited to think about the subject in a new way. Nation-States and the Global Environment Erika Marie Bsumek, David Kinkela, Mark Atwood Lawrence, 2013-05-02. Hardly a day passes without journalists, policymakers, academics or scientists calling attention to the worldwide scale of the environmental crisis confronting humankind. While climate change has generated the greatest alarm in recent years, other global problems—desertification, toxic pollution, species extinctions, drought and deforestation—to name just a few—loom close behind. The scope of the most pressing environmental problems far exceeds the capacity of individual nation-states; much less smaller political entities. To compound these problems, economic globalization, the growth of non-governmental activist groups and the accelerating flow of information have fundamentally transformed the geopolitical landscape. Despite the new urgency of these

challenges however they are not without historical precedent As this book shows nation states have long sought agreements to manage migratory wildlife just as they have negotiated conventions governing the exploitation of rivers and other bodies of water Similarly nation states have long attempted to control resources beyond their borders to impose their standards of proper environmental exploitation on others and to draw on expertise developed elsewhere to cope with environmental problems at home This collection examines this little understood history providing case studies and context to inform ongoing debates

Developing The Environment C Barrow,2014-09-19 This book presents a comprehensive overview of global environmental problems past present and future examining their roots and implications and suggesting where possible ways in which they might be mitigated or avoided by careful management

Nature, Action and the Future Katrina Forrester,Sophie Smith,2018-01-25 Climate change is one of the great challenges of modern politics In this volume leading political theorists and historians investigate how the history of political ideas can help us make sense of it The contributors add a historical perspective to contemporary debates in political theory They also show that the history of political thought offers new directions for thinking about the environment today By situating the relationship between humans and nature within a wider history of ideas the essays provide alternative ways of thinking about the most intractable problems of environmental politics the status of science in modern democracies problems of collective action and the challenges of fatalism This volume will create new avenues of research for scholars and students in the history of political thought It is essential reading for undergraduate students interested in environmental challenges both those in politics seeking a historical perspective and those in history who want to link their studies to the present

Cultural Landscapes and Environmental Change Lesley Head,2017-09-25 Cultural landscapes are usually understood within physical geography as those transformed by human action As human influence on the earth increases advances in palaeocological reconstruction have also allowed for new interpretations of the evidence for the earliest human impacts on the environment It is essential that such evidence is examined in the context of modern trends in social sciences and humanities This stimulating new book argues that convergence of the two approaches can provide a more holistic understanding of long term physical and human processes Split into two major sections this book attempts to bridge the gap between the sciences and humanities The first section provides an analysis of the methodological tools employed in examining processes of environmental change Empirical research in the fields of palaeocology and Quaternary studies is combined with the latest theoretical views of nature and landscape occurring in cultural geography archaeology and anthropology The author examines the way in which environmental management decisions are made The book then moves on to discuss the relevance of this perspective to contemporary issues through a wide variety of international case studies including World Heritage protection landscape preservation indigenous people and cultural tourism

Global Environmental History Ian G Simmons,2008-03-05 Courses which

deal with environmental history have long lacked a comprehensive overview I G Simmons has made a significant contribution with a book that looks at the long term history of environment and humanity from 10 000 BC to AD 2000 This far reaching text considers the global picture and recognises the contributions of many disciplines including the natural sciences the social sciences and increasingly the humanities As a starting point this book takes the major phases of human technological evolution of the last 12 000 years and considers how these have affected the natural world It then considers the response to conditions such as climate change putting today s preoccupations into a long term perspective This is a book of history not prophecy and so makes no judgements on current anxieties Historical Disaster Experiences Gerrit Jasper

Schenk,2017-03-20 Historical disaster research is still a young field This book discusses the experiences of natural disasters in different cultures from Europe across the Near East to Asia It focuses on the pre industrial era and on the question of similarities differences and transcultural dynamics in the cultural handling of natural disasters Which long lasting cultural patterns of perception interpretation and handling of disasters can be determined Have specific types of disasters changed the affected societies What have people learned from disasters and what not What adaptation and coping strategies existed Which natural societal and economic parameters play a part The book not only reveals the historical depth of present practices but also reveals possible comparisons that show globalization processes entanglements and exchanges of ideas and practices in pre modern times **The Ashgate Research Companion to Modern Imperial Histories** John

Marriott,2016-03-23 Written by leading scholars this collection provides a comprehensive and authoritative overview of modern empires Spanning the era of modern imperial history from the early sixteenth century to the present it challenges both the rather insular focuses on specific experiences and gives due attention to imperial formations outside the West including the Russian Japanese Mughal Ottoman and Chinese The companion is divided into three broad sections Part I Times surveys the three main eras of modern imperialism The first was that dominated by the settlement impulse with migrants many voluntarily and many more by force making new lives in the colonies This impulse gave way most especially in the nineteenth century to a period of busy and rapid expansion which was less likely to promote new settlement and in which colonists more frequently saw their sojourn in colonial lands as temporary and related to the business mostly of governance and trade Lastly in the twentieth century in particular empires began to fail and to fall Part II Spaces studies the principal imperial formations of the modern world Each chapter charts the experience of a specific empire while at the same time placing it within the complex patterns of wider imperial constellations The individual chapters thus survey the broad dynamics of change within the empires themselves and their relationships with other imperial formations and reflect critically on the ways in which these topics have been approached in the literature In Part III Themes scholars think critically about some of the key features of imperial expansion and decline These chapters are brief and many are provocative They reflect the current state of the field and suggest new lines of inquiry which may follow from more comparative perspectives

on empire The broad range of themes captures the vitality and diversity of contemporary scholarship on questions of empire and colonialism encompassing political economic and cultural processes central to the formation and maintenance of empires as well as institutions ideologies and social categories that shaped the lives both of those implementing and those experiencing the force of empire In these pages the reader will find the slave and the criminal the merchant and the maid the scientist and the artist alongside the structures which sustained their lives and their livelihoods Overall the companion emphasises the diversity of imperial experience and process Comprehensive in its scope it draws attention to the particularities of individual empires rather than over generalising as if all empires at all times and in all places behaved in a similar manner It is this contingent and historical specificity that enables us to explore in expansive ways precisely what constituted the modern empire

[Encyclopedia of global warming and climate change](#) S. George Philander, 2008-04-22 This is a collection of approximately 750 articles exploring major topics related to global warming and climate change ranging geographically from the North Pole to the South Pole and thematically from social effects to scientific cause It also covers industrial and economic factors the role of societies and much more
