Vig, Regina S. Axelrod, 2023-04-14 All serious environmental threats are now international in scope and more than one thousand international environmental agreements already exist Yet the prospects for international cooperation leading to the management of impacts on the planet remain grim The Global Environment meets the need for an authoritative assessment of the state of international environmental institutions laws and policies at the end of the 20th century The book examines disagreements over the meaning of sustainable development problems inherent in implementing environmental policies and the conflict over the exclusion of developing countries from the Kyoto Protocol It discusses the profound trade offs that may be required the role of international financial interests in promoting incompatible forms of development and analyses international environmental institutions law and policy and sustainable development Advancing the Science of Environmental Justice in the International Wildlife Trade Jamie K. Reaser, Nicholas King, Gunârs Hauß Platáis, Ines Arroyo-Quiroz , Meredith L. Gore, Isla Kirkey, 2025-06-03 The Smithsonian Institution has offered to cover the publication costs of most if not all of the papers accepted for this Research Topic There is a need to conceptualize an environmental justice framework that informs regulation of the international wildlife trade to minimize species endangerment and infectious disease risks while also affording environmental justice to communities nations species and ecological systems entwined in the commerce pathway This Research Topic is dedicated to advancing the science of environmental justice in the international wildlife trade from both problems and solutions perspectives We welcome manuscripts relevant to legal and or illegal aspects of the international wildlife trade Submissions must be of a scholarly nature and framed from a social sciences perspective although inter disciplinary work is encouraged The international wildlife trade has been recognized as one of the

greatest threats to biodiversity as well as a facilitator of zoonotic disease transmission with pandemic potential. This has led to increased calls for regulation of this megabillion year industry ranging from comprehensive bans to risk based strategies that are species product and or geography specific. Every aspect of wildlife commerce and every proposed risk mitigation measure has implications for environmental justice yet environmental justice has not been mainstreamed in the scientific inquiry policy nor planning processes relative to the international wildlife trade. Because wildlife trade has diverse drivers and purposes as well as different levels of legality social legitimacy and enforcement there is an urgent need to understand the environmental justice issues tied to consumer demand vs supply provision along the trade chain including how this is influenced by economic cultural and geographic biases. An understanding of environmental justice patterns and trends is necessary for the design and support of effective regulatory frameworks that manage risks in actuality rather than merely in concept. Determining where and how to permit and support legal and sustainable wildlife trade versus where it should be more tightly regulated or even cease requires at least as much understanding of the human animal as it does the wildlife species. A greater understanding of the political economy of the illegal aspects of the international wildlife trade from an environmental justice perspective can also open new vistas of green criminological inquiry. Ecological citizenship and environmental justice are central themes in green criminology highly relevant to the wildlife trade. They recognize justice as central to the right to be protected from harm whether that is one on one harm institutionalized harm or harm arising from human actions that affect climates and environments on a global scale. The recognition of such rights in trade regulation is scant and more likely overshadowed by a desire to protect the economic value of a good rather than the inherent value of the wild animal being consumed. We will prioritize papers that use social science approaches tools to empirically investigate aspects of environmental justice in the international wildlife trade. Manuscripts should be framed so as to facilitate development of an environmental justice framework that informs regulation of the international wildlife trade to minimize species endangerment and infectious disease risks while also affording environmental justice to communities nations and ecological systems entwined in the commerce pathway. We welcome manuscripts relevant to legal and or illegal aspects of the international wildlife trade. Submissions must be of a scholarly nature we will not accept advocacy documents. The following manuscript types will also be considered if the contributions are sufficiently innovative transformative: 1 Case studies of environmental justice problems resolutions in the international wildlife trade context 2 Models for advancing the science of environmental justice in the international wildlife trade context 3 Analyses of international wildlife trade law policy frameworks with a view toward integrating environmental justice issues as rooted in scholarly science. All papers should emphasize conservation goals outcomes. Direct inquiries about other manuscript themes types to Dr Jamie K Reaser at Reaserjk@si.edu. This Research Topic was developed in collaboration with the IUCN Commission on Education and Communication <https://www.iucn.org/our-union/commissions/commission-education-and-communication> and the International

Global Governance of Genetic

Resources Sebastian Oberthür, G. Kristin Rosendal, 2013-10-30 This book analyses the status and prospects of the global governance of Access Benefit Sharing ABS in the aftermath of 2010's Nagoya Protocol to the Convention on Biological Diversity CBD. The CBD's initial 1992 framework of global ABS governance established the objective of sharing the benefits arising from the use of genetic resources fairly between countries and communities. Since then ABS has been a contested issue in international politics not least due to the failure of effective implementation of the original CBD framework. The Nagoya Protocol therefore aims to improve and enhance this framework. Compared to the slow rate of progress on climate change it has been considered a major achievement of global environmental governance but it has also been coined a masterpiece of ambiguity. This book analyses the role of a variety of actors in the emergence of the Nagoya Protocol and provides an up to date assessment of the core features of the architecture of global ABS governance. This book offers a central resource regarding ABS governance for those working on and interested in global environmental governance. This is achieved by focusing on two broad themes of the wider research agenda on global environmental governance namely architecture and agency. Furthermore individual chapter contributions relate and link ABS governance to other prominent debates in the field such as institutional complexes, compliance, market based approaches, EU leadership, the role of small states, the role of non state actors and more. Partly due to its seeming technical complexity ABS governance has so far not been at the centre of attention of scholars and practitioners of global environmental governance. In this book care is taken to provide an accessible account of key functional features of the governance system which enables non specialists to gain a grasp on the main issues involved allowing the issue of ABS governance to move centre stage and be more fully recognised in discussions on global environmental governance. *The Palgrave Handbook of the International Political Economy of Energy*

Thijs Van de Graaf, Benjamin K. Sovacool, Arunabha Ghosh, Florian Kern, Michael T. Klare, 2016-08-05 This Handbook is the first volume to analyse the International Political Economy the who gets what when and how of global energy. Divided into five sections it features 28 contributions that deal with energy institutions, trade, transitions, conflict and justice. The chapters span a wide range of energy technologies and markets including oil and gas, biofuels, carbon capture and storage, nuclear and electricity and it cuts across the domestic international divide. Long standing issues in the IPE of energy such as the role of OPEC and the resource curse are combined with emerging issues such as fossil fuel subsidies and carbon markets. IPE perspectives are interwoven with insights from studies on governance, transitions, security and political ecology. The Handbook serves as a potent reminder that energy systems are as inherently political and economic as they are technical or technological and demonstrates that the field of IPE has much to offer to studies of the changing world of energy.
