DayWater Daniel R. Thevenot, 2008-03-15 The European DayWater project has developed a prototype of an Adaptive Decision Support System ADSS related to urban stormwater pollution source control The DayWater ADSS greatly facilitates decision making for stormwater source control which is currently impeded by the large number of stakeholders involved and by the necessary multidisciplinary knowledge This book presents the results of this project providing new insights into both technical and management issues The main objectives of its technical chapters are pollution source control modelling risk and impact assessment and evaluation and comparison of best management practices It also covers management aspects such as the analysis of the decision making processes in stormwater source control at a European scale and stormwater management strategies in general The combination of scientific technical and socio managerial knowledge with the strong

cooperation of numerous end users reflects the innovative character of this book which includes actual applications of the ADSS prototype in significant case studies DayWater an Adaptive Decision Support System for Urban Stormwater Management contains 26 chapters collectively prepared by DayWater scientific partners and end users associated with this European Research and Development project It includes A general presentation of the DayWater Adaptive Decision Support System ADSS structure and operation modes A detailed description of the major components of this ADSS prototype The assessment of its components in significant case studies in France Germany and Sweden The proceedings of the International Conference on Decision Support Systems for Integrated Urban Water Management held in Paris on 3 4 November 2005 The book presents the ADSS prototype including a combination of freely accessible on line databases guidance documents road maps and modelling or multi criteria analysis tools As demonstrated in several significant case studies the challenge for stormwater managers is to make the benefits of urban stormwater management visible to society resulting in active co operation of a diversity of stakeholders Only then will sustainable management succeed DayWater an Adaptive Decision Support System for Urban Stormwater Management advances this cause of sustainable urban management through Urban stormwater management and makes achievable by means of risk and vulnerability tools which are included the goal of integrated urban water management IUWM

**Enhancing Urban Environment by Environmental Upgrading and Restoration** Daniel Sztruhar, Mario Giulianelli, Ben Urbonas, 2006-07-06 As urban areas keep growing water infrastructure ages and the requirements on environmental protection become more rigorous there is a continual need for upgrading water pollution control facilities and restoring degraded urban waters Such issues are addressed in this book by focusing on five major topics a Upgrading stormwater management facilities b Retrofitting upgrading combined sewer overflow CSO facilities c Optimising upgrading sewage treatment plant performance d Urban stream restoration and e Challenges in restoring urban environment Each chapter contains some overview papers followed by research or case study papers Besides presentations of new approaches and accomplishments in the field of upgrading and restoration several papers provide analysis of vast needs in this field in several countries of Central and Eastern Europe which either recently joined the European Union EU or are preparing for accession and need to comply with the existing EU directives dealing with environmental protection As such this book will be of primary interest to researchers and university lecturers dealing with environmental upgrading and restoration environmental planners from all levels of government municipal engineers and politicians and finally the private industry representatives consultants private utilities and environmental technology suppliers searching for new business opportunities among the new or aspiring members of EU

**Enhancing Urban Environment by Environmental Upgrading and Restoration** Jiri Marsalek, 2004-09-16 The fusion of algebra analysis and

geometry and their application to real world problems have been dominant themes underlying mathematics for over a century Geometric algebras introduced and classified by Clifford in the late 19th century have played a prominent role in this effort as seen in the mathematical work of Cartan Brauer Weyl Chevalley Atiyah and Bott and in applications to physics in the work of Pauli Dirac and others One of the most important applications of geometric algebras to geometry is to the representation of groups of Euclidean and Minkowski rotations This aspect and its direct relation to robotics and vision will be discussed in several chapters of this multi authored textbook which resulted from the ASI meeting Moreover group theory beginning with the work of Burnside Frobenius and Schur has been influenced by even more general problems As a result general group actions have provided the setting for powerful methods within group theory and for the use of groups in applications to physics chemistry molecular biology and signal processing These aspects too will be covered in detail With the rapidly growing importance of and ever expanding conceptual and computational demands on signal and image processing in remote sensing computer vision medical image processing and biological signal processing and on neural and quantum computing geometric algebras and computational group harmonic analysis the topics of the book have emerged as key tools The list of authors includes many of the world's leading experts in the development of new algebraic modeling and signal representation methodologies novel Fourier based and geometric transforms and computational algorithms required for realizing the potential of these new application fields

**Assessing Infiltration and Exfiltration on the Performance of Urban Sewer Systems** Bryan Ellis,Jean-Luc Bertrand-Krajewski,2010-02-10 Sewer systems constitute

a very significant heritage in European cities Their structural quality and functional efficiency are key parameters to guarantee the transfer of domestic and industrial wastewater to treatment plants without infiltration nor exfiltration Infiltration of groundwater is particularly detrimental to treatment plant efficiency while exfiltration of wastewater can lead to groundwater contamination The European research project APUSS Assessing infiltration and exfiltration on the Performance of Urban Sewer Systems was devoted to sewer infiltration and exfiltration questions It was structured in three main Work Areas dealing respectively with i the development of new measurement methods based on tracer experiments and accounting for detailed uncertainty analyses ii the implementation of models and software tools to integrate structural and experimental data and to facilitate data display operational management and decision making processes and iii the integration of economic and operational questions by means of cost estimation economic evaluation performance indicators and multi criteria methods applied to investment rehabilitation strategies This final report describes the objectives methods and main results for each Work Area References to detailed methods protocols reports and tools are given in this final report

which will be an invaluable source of information for all those concerned with the performance of urban sewer systems
