## **Glossary Of Meteorology:**

Glossary of Meteorology Ralph E. Huschke, 1959      Glossary of Meteorology Todd S. Glickman, American Meteorological Society, 2000 This electronic version of the 2nd Edition of the Glossary of Meteorology is meant to be a living document to be periodically updated as terms in our field evolve Has over 12 000 meteorological terms      *A Comprehensive Glossary of Weather Terms for Storm Spotters* Michael L. Branick, 1993-05      **Glossary of Weather and Climate** Ira W. Geer, 1996

Glossary of Meteorology Ralph E. Hirschke, 1959      Glossary of Meteorology American Meteorological Society, Todd S. Glickman, 2010-10-15      Meteorological Glossary Great Britain. Meteorological Office, 1972 PREFACE TO THE FIFTH EDITION When in 1967 the Meteorological glossary came under consideration for reprinting it was decided to ask Dr McIntosh to undertake a revised edition with cooperation from within the Meteorological Office The opportunity has been taken in this edition to delete some terms which are considered no longer appropriate and to include various new entries and revisions which stem from recent advances and practice Units of the Systeme International have been adopted in this edition In some cases however the traditional British or metric units are also included because of existing World Meteorological Organization recommendations and for the convenience of user interests during the period before complete national and international adoption of SI units Meteorological Office 1970 PREFACE TO THE FOURTH EDITION In 1916 during the directorship of Sir Napier Shaw the Meteorological Office published two pocket size companion volumes the Weather map to explain how weather maps were prepared and used by the forecasters and the Meteorological glossary to explain the technical meteorological terms then employed With the advance of the science and the elaboration of its techniques the publications have been in continuous demand many times reprinted and on several occasions completely revised The second edition was in 1930 the third in 1938 39 and soon after World War II it was obvious that radical revision was necessary once again In 1956 the fourth edition of the Weather map was issued but for the first time in forty years it was not found possible to prepare simultaneously a new edition of the Meteorological glossary which had become very much out of date and in need of a complete remodeling For earlier editions the task had been shared amongst the professional staff of the Office and the result was an interesting and up to date volume containing much useful information although the freedom allowed to the many contributors had led to a unique volume of quite uneven character with articles varying from brief dictionary definitions to encyclopedic essays For the fourth edition the number of new entries was to be larger than ever before and it was decided that the need was now for a more systematic reference work containing a brief definition of all the terms in ordinary use rather than for a compilation of miscellaneous articles giving information which would more properly be looked for in one of the many modern textbooks For this purpose a single author assisted if need be by expert referees would it seemed be advantageous and the Office was fortunate in finding in Dr D H McIntosh of the University of Edinburgh a physicist and meteorologist of wide experience willing to undertake the major task Before being passed for printing every

article has been read critically by more than one member of the scientific staff of the Office and Dr McIntosh has shown a remarkable readiness to compromise In this way it is hoped that the excellence of the author s original draft has been fully retained while providing a work which will adequately meet the needs of the official service It would however be too much to hope that no further improvement will be possible and the Office will be pleased to receive from any source criticisms and suggestions calculated to increase the value of the work not only for the professional meteorologist but for interested people everywhere Meteorological Office 1962      **Weather Glossary** Alfred Henry Thiessen,1946      Meteorology , Glossary of Terms Frequently Used in Weather Modification ,1968      **Final Report** ,2000 The American Meteorological Society has updated the Glossary of Meteorology from the first addition which was published in 1959 The second edition contains over 12 000 entries in meteorology and related fields The glossary will be made available in both book and CD ROM formats DOE was one of six federal agencies that provided support for this project      *A Dictionary of Weather* Storm Dunlop,2008-08-15 An authoritative and wide ranging new edition of A Dictionary of Weather containing almost 2 000 entries on all areas of the subject Provides clear definitions and illustrative examples of terminology taken from meteorology forecasting and climatology Revised and fully updated this edition includes 300 new and revised entries such as A Train Pineapple Express and Watermelon snow and added feature entries highlighting actual occurrences of extreme weather including the Indian Ocean Tsunami and Hurricane Katrina Generously illustrated and containing recommended websites for further reading this reference work is thoroughly comprehensible Find out where and when the world s largest hailstone fell or where the highest temperature was recorded using the list of weather records and check climate data for different weather types from around the world Key terms from the related fields of oceanography hydrology and climatology are also covered as well as biographical information on important people in the development of meteorology Arranged in A Z format it is a unique dictionary and an essential reference source for meteorology and geography students whether at school or university as well as for amateur meteorologists and the general reader      **The Meteorological Glossary** ,1939      *Weather Glossary* ,1949      Meteorological Glossary Great Britain.
