Stuart L. Silverman

Glucocorticoid-induced Osteoporosis:

Glucocorticoid-induced Osteoporosis Andrea Giustina, Alberto Angeli, Ernesto Canalis, 2002 Osteoporosis is one of the most clinically relevant disabling chronic disease encountered in clinical practice A common cause of osteoporosis is glucocorticoid excess as glucocorticoids may increase bone resorption inhibit bone formation have indirect actions on bone by decreasing intestinal calcium absorption and induce hypercalciuria This book presents a comprehensive overview of the effects of glucocorticoids on bone metabolism and structure and on the diagnosis and treatment of glucocorticoid induced osteoporosis It aims at providing updated information on the pathogenesis diagnosis and treatment of this often dramatic complication of glucocorticoid excess Being one of the few publications completely devoted to glucocorticoid induced osteoporosis it will heighten the awareness of specialists who prescribe glucocorticoids of the clinical relevance of this treatment complication Glucocorticoid Induced Osteoporosis is addressed to clinical experts as well as to general practitioners who will both benefit from the comprehensive and integrative view of the management of patients exposed to glucocorticoids Glucocorticoid-induced Osteoporosis Bone and Tooth Society, 2002 *Glucocorticoid Induced Osteoporosis and Mechanisms of Intervention* Amy Yoshiko Sato, 2017 Glucocorticoid excess is a leading cause of osteoporosis The loss of bone mass and strength corresponds to the increase in fractures exhibited after three months of glucocorticoid therapy Glucocorticoids induce the bone cellular responses of decreased bone formation increased osteoblast osteocyte apoptosis and transient increased bone resorption which result in rapid bone loss and degradation of bone microarchitecture The current standard of care for osteoporosis is bisphosphonate treatment however these agents further suppress bone formation and increase osteonecrosis and low energy atypical fracture risks Thus there is an unmet need for interventions that protect from glucocorticoid therapy The purpose of these studies was to investigate novel mechanisms that potentially interfere with glucocorticoid induced bone loss We chose to explore pathways that regulate endoplasmic reticulum stress the canonical Wnt pathway and Pyk2 activity Pharmacologic reduction of endoplasmic reticulum stress through salubrinal administration protected against glucocorticoid induced bone loss by preservation of bone formation and osteoblast osteocyte viability In contrast inhibition of Wnt antagonist Sost sclerostin and inhibition of Pyk2 signaling did not prevent glucocorticoid induced reductions in bone formation however both Sost sclerostin and Pyk2 deficiency protected against bone loss through inhibition of increases in resorption Overall these studies demonstrate the significant contributions of reductions in bone formation increased osteoblast osteocyte apoptosis and elevations in resorption to the rapid 6-12% bone loss exhibited during the first year of glucocorticoid therapy However glucocorticoid excess also induces skeletal muscle weakness which is not reversed by bisphosphonate treatment or the interventions reported here of salubrinal Sost sclerostin inhibition or Pyk2 deficiency Further the novel finding of increased E3 ubiquitin ligase atrophy signaling induced by glucocorticoids in both bone and muscle by tissue specific upstream mechanisms provides opportunities for therapeutic

combination strategies Thus future studies are warranted to investigate the role of E3 ubiquitin ligase signaling in the deleterious glucocorticoid effects of bone and muscle Glucocorticoid-induced Osteoporosis Bone and Tooth Society,Royal College of Physicians of London,National Osteoporosis Society (Great Britain),2002 **Glucocorticoid and bone: friend or foe?** Elizabeth Martha Winter,Barbara Hauser,Ulrike Baschant,2022-09-20 **Glucocorticoid-induced osteoporosis** John Keegan,University of Brighton. Asadullah,2013-04-17 The long term use of glucocorticoids is associated with several deleterious effects Attempts to separate the beneficial from the adverse effects of these compounds have met with varying degrees of difficulty The discovery of distinct modes of action of the glucocorticoid receptor the protein that mediates glucocorticoid action has opened up many possibilities for improving glucocorticoid therapy This book provides an in depth overview of the molecular actions of the glucocorticoid receptor and discusses the chances of an imminent identification of selective glucocorticoid agonists Such compounds should fulfill all the criteria of a glucocorticoid but should lack the sideeffects so far linked with classical glucocorticoids **Osteoporosis, An Issue of Rheumatic Disease Clinics** Stuart L. Silverman,2011-08-28 This timely and evocative issue of Rheumatic Disease Clinics explores important current and controversial topics in the treatment of osteoporosis And it answers some tough questions Here are some examples How long do I treat my patient Is there a place for bone turnover markers How much Vitamin D should I recommend Controversies around calcium and Vitamin D are explored regarding the coronary risk and pancreatic issues Emerging therapies are presented including sclerostin and oral calcitonin Long term safety concerns of antiresorptive therapy ONJ atypical fracture would healing are explained The utility and limitations of FRAX are covered as well as Prolia and the RANKL pathway An update on glucocorticoid induced OP is given The reader is also brought up to date on men s health issues and OP This is an essential issue for any practicing rheumatologist to stay current in the field *The Effects of Bisphosphonates on the Development of Glucocorticoid-induced Osteoporosis in a Mouse Model of Duchenne Muscular Dystrophy* Sung-Hee Seanna Yoon,2015 The Pathogenesis and Treatment of Glucocorticoid-induced Osteoporosis Ian R.
