Communications Infrastructure, Systems and Applications Rashid Mehmood, Eduardo Cerqueira, Radoslaw Piesiewicz, Imrich Chlamtac, 2009-12-12 The First International

ICST Conference on Communications Infrastructure Systems and Applications in Europe EuropeComm 2009 was held August 11-13, 2009 in London. EuropeComm 2009 brought together decision makers from the EU communication top researchers and industry executives to discuss the directions of communications research and development in Europe. The event also attracted academia and industry representatives as well as government officials to discuss the current developments and future trends in technology applications and services in the communications field. Organizing this conference was motivated by the fact that the development and deployment of future services will require a common global scale infrastructure and therefore it is important that designers and stakeholders from all the systems stacks come together to discuss these developments. Rapidly decreasing costs of computational power, storage capacity and communication bandwidth have led to the development of a multitude of applications carrying an increasingly huge amount of traffic on the global networking infrastructure. What we have seen is an evolution: an infrastructure looking for networked applications has evolved into an infrastructure struggling to meet the social, technological and business challenges posed by the plethora of bandwidth hungry emerging applications.

Optical Switching Tarek S. El-Bawab, 2008-02-11. Optical Switching is the most comprehensive and up to date reference book on its subject. After three decades of research and development efforts, optical switching has started to be deployed in cutting edge networking initiatives. The optical devices, optical networks and telecommunications data networking communities are in need of a reference book that compiles diverse optical switching research from device technologies to system and network architectures into one properly structured volume. This book provides such a service to these communities. The book is structured into three parts. The first part provides the foundation for understanding the potential role of optical switching in communication networks. The second part is focused on optical switching technologies and on devices based upon them. Theories, operation principles and fabrication techniques are discussed. The third part covers optical switching fabrics, systems and networks. Applications of optical switching in communication networks are discussed involving optical circuit, packet and burst switching. The chapters are self contained with minimum overlap. They bring together academic and industrial contributions, analytical and descriptive treatments and cover theories, experimentation and practice. The material has been carefully coordinated to form a homogeneous manuscript having a progressive and logical development of ideas and concepts. The book embraces a number of distinctive innovations. Old and new terminologies are investigated, clarified, redefined where necessary and used consistently throughout the entire volume. The treatment of the subject is original, not only in terms of comprehensive coverage but also in terms of structure and organization. Twenty four authors contributed the fourteen chapters of this book including the Editor Tarek S. El-Bawab who authored four chapters.

Advanced Optical Communication Systems and Networks Milorad Cvijetic, Ivan Djordjevic, 2013. This resource provides the latest details on 5th generation photonic systems that can be readily applied to projects in the field. Moreover, the book provides valuable time saving tools for network simulation and modeling. It includes coverage of optical signal

transmission systems and networks a wide range of critical methods and techniques such as MIMO multiple input and multiple output by employing spatial modes in few mode and multicore optical fiber OFDM orthogonal frequency division multiplexing utilized to enhance the spectral efficiency and to enable elastic optical networking schemes and advanced modulation and coding schemes to approach the Shannon's channel capacity limit There are detailed discussions on the basic principles and applications of high speed digital signal processing as well as description of the most relevant post detection compensation techniques
