Environmental Education Trilochan S. Bakshi, Zev Naveh, 2012-06-15 The environmental movement of the 1960s made educationists in some parts of the world aware of the significance and importance of ecology in curricula at all levels of education from kindergarten to post secondary A great deal of progress was made in the early 1970s in incorporating environmental awareness programs into educational systems so that what was once considered a fad was gradually becoming a part of formal education in a number of institutions especially in Canada and the U S A It was therefore appropriate that an international scientific body devote some time to the issue of ecology in education Early in 1976 I suggested to the International Association for Ecology Inteco1 that a symposium on Environmental Education be included in the program of the Second International Congress of Ecology scheduled to be held in Jerusalem in September 1978 In the first draft program of the Congress the topic was included as a poster session I considered this inadequate and appealed to the Congress Steering Committee to focus greater attention on environmental education The first draft program contained phrases like utilization of resources conservation problems environmental monitoring and irreversible changes These phrases more or less assumed that people in general understood ecological principles Literature on environmental education seems to suggest that a wide gap separated most of the professional ecologists from a large portion of mankind primarily because we the ecologists have paid scant attention to the ecological education of world's citizens

The Education Ecology of

Universities Robert A. Ellis, Peter Goodyear, 2019-03-26 Many universities around the world are finding that the structures and processes they have put in place to further their educational missions are being tested by rapidly changing circumstances. These changes involve new pedagogies, new course designs, new technologies, and updating of the physical campus reflecting diversifying student needs, growing student numbers, increasing competition, and more demanding stakeholder expectations. *The Education Ecology of Universities* examines these issues starting with the challenges identified by university leaders who have responsibility for education, digital, and campus planning. Sharing an analysis of in-depth interviews with more than 50 leaders, it identifies a range of conceptual and procedural gaps that undermine the full development and alignment of education, digital, and campus strategies. The second half of the book provides practical ideas for taking a more holistic, indeed ecological, approach to understanding and improving university learning environments. Setting out a case for a new applied science of educational ecology, this book offers foundational concepts and theoretical perspectives, introducing methods for analysing and evaluating teaching and learning ecosystems. It will be of interest to anyone who wants better ways of understanding how local systems function and can be improved. It is a must-read text for all leaders and researchers in education and indeed for anyone concerned with the future of higher education.

The Ecology of School David Zandvliet, 2013 This book describes and documents one school's experiences in achieving their environmental literacy goals through the development of a place-based learning environment. Through this initiative, a longitudinal descriptive case study began at the Bowen Island Community School to both support and advocate for ecological literacy while helping the school realize its broad environmental learning goals. Conceptualised as an intensive case study of a learning environment with an environmental education focus, the program was part of a larger ecological literacy project conducted in association with preservice and graduate education programs at a nearby university and research centre. Following both empirical learning environments and participatory ethnographic research methods, the project is described from a variety of perspectives: students, teachers, teacher educators, researchers, and administrators. The volume describes a variety of forms of place-based education that teachers devised and implemented at the school while giving evidence of the development of a supportive and positive place-based learning environment. The programs and initiatives described in this volume provide the reader with insights for the development of place-based programming more generally. The final chapter outlines participatory methods and action research efforts used to evaluate the success of the project and recounts the development and validation of a learning environment instrument to assist with this process. The new instrument, coupled with qualitative descriptions of the learning environment experienced by many at the school, give unique insights into the various ways the study of learning environments as a methodology may be explored.
