Kassim, Damià Barceló, 2009-04-07 and used in munitions Rather the requirements for the agent s military effects took precedence In addition the interaction among the political technical and legal challenges connected with the known or possible risks posed by CW agents is complex and sometimes not well understood This is usually because technical considerations when acted on are almost invariably informed by political ones such as various legal requirements The book contains nine chapters covering different aspects of the research on environmental consequences of war and its aftermath and covers in one additional chapter more general issues such as prevention of war and its environmental consequences the legal political and technical background to selected environmental and human health effects of CW agents and the atmospheric transport and deposition of persistent organic pollutants under warfare conditions to more specific ones related

to two main tragic examples the war in the Balkans and the Gulf War Aspects of the war in the Balkans cover contamination by heavy metals in Serbian national parks the impact of NATO strikes on the Danube river basin and the problems associated with transuranium elements The Gulf War in Kuwait covers other problems related to the impact of oil contamination the impact on ground water resources and the soil damage of ground fortifications among other environmental and health problems

Euphrates and Tigris, Mesopotamian Ecology and Destiny J. RZÓSKA, 2012-12-06 Scope and limitations of this book I am trying here to present the natural history of a land largely created and dominated by two great rivers the Euphrates and Tigris All rivers have two main functions quite different from lakes they transport water and eroded material sometimes over large distances The astute Greeks who penetrated here in the 4th century B C called the land Mesopotamia an apt name it is the only region in the Near East except Egypt having the benefit of large rivers Another name coined in antiquity was Fertile Crescent stretching from Egypt to present day Iraq Herodotus marvelled at the fertility of the soils the abundance of water and the magnificent cities of Mesopotamia Thus a further role of some great rivers is recognized as foci of human development The desire to collate this book arose from a similar motif as in the Nile book 1976 the intricate connection between man and rivers Rivers of the Sultan Faisal H. Husain, 2021-03-05 In the early sixteenth century a series of military campaigns between the Mediterranean Sea and Persian Gulf brought the entirety of the Tigris and Euphrates rivers under Ottoman control This book offers a history of this rare political unification of the longest rivers in West Asia and its impact on the Ottoman state provincial society and the environment *Handbook of Plant Palaeoecology (First edition 2012)* René T. J. Cappers, Reinder Neef, 2012-01-06 Plant palaeoecologists use data from plant fossils and plant subfossils to reconstruct ecosystems of the past This book deals with the study of subfossil plant material retrieved from archaeological excavations and cores dated to the Late Glacial and Holocene One of the main objectives of this book is to describe the processes that underlie the formation of the archaeobotanical archive and the ultimate composition of the archaeobotanical records being the data that are sampled and identified from this immense archive Our understanding of these processes benefits from a knowledge of plant ecology and traditional agricultural practices and food processing This handbook summarizes the basic ecological principles that relate to the reconstruction of former vegetations and of agricultural practices in particular We hope this book will help palaeobotanists environmental archaeologists and colleagues from related disciplines optimize inferences based on what we could term old style archaeobotany And we hope that our observations will serve as an eye opener and improve future research not only as it is practised in our laboratories but also as it is practised in the field **Remote Sensing in Soil Science** M.A. Mulders, 1987-05-01 This book provides comprehensive coverage of remote sensing techniques and their application in soil science A clear step by step approach to the various aspects ensures that the reader will gain a good grasp of the subject so that he can apply the techniques to his own field of study The book opens with a thorough introduction to the physical aspects of electromagnetic radiation and the technical aspects of remote

sensing and image processing This is followed by a discussion of the methods for interpreting remote sensing data and their application to soils vegetation and land as a whole As the interpretation of soil conditions is based on many aspects i e soil surface vegetation land use land form the scope of the book is correspondingly broad It will therefore provide much useful information for students and scientists in soil science geography geology hydrology ecology agriculture and civil engineering

Woody Plants in Agro-Ecosystems of Semi-Arid Regions Henk Breman,Jan-Joost Kessler,2012-12-06 This book provides a quantitative analysis of the role of woody plants in semi arid regions for the aSSessment of their benefits in agrosylvopastoralland use systems with productive and sus tainability objectives The insights presented and conclusions drawn allow the additional benefits of woody plants for specific climatic and physical site conditions and land use systems to be estimated The Sahel and Sudan zones in West Africa on which the book focusses represent resource poor conditions whose ecological dynamics have been relatively well studied The role of woody plants in this region as assessed in this book is extrapolated to other semi arid regions leading to general conclusions on agroforestry s potential as an option for

sustainable land use in semi arid regions The origins of this book go back to 1982 when the Club du Sahel requested that available data on woody plants in the Sahel region be synthesised to provide basic information to enable better attention to be given to woody plants in rural development programmes We are grateful to the Club du Sahel for this challenge Various people contributed to studies used in this book The preliminary inventory of the data available was made by Frits Ohler later his work was continued by Franciska Dekker *Range Management In Arid Zones* Samira A.S.
