Industrial Clusters and Regional Business Networks in England, 1750-1970 John Wilson, Andrew Popp, 2017-07-05 Although economists have long recognised industrial districts as one of the key features of many economies it is only recently that attention has been focused on the region as an effective means of generating accurate insights into the larger picture of economic performance This renewed interest in regional issues has also placed at centre stage the role played by networks as a principal organisational feature of the local business community providing scholars with a rich topic for investigation and debate Recent work has shown that universal generalisations concerning the impact of networking on the performance of industrial clusters lack credibility highlighting the consequent need to compare the role played by business networks in a variety of regions Using a copious range of research material examining several British regions this volume poses a series of fundamental questions about the nature of industrial clusters and networks Particular attention is paid to identifying the basic characteristics of a network outlining how they evolved in key industrial clusters and assessing their impact on industrial performance both regionally and nationally The durability of such networks is another key thread that runs through the essays prompting comparison with industrial clusters in Britain and abroad These are issues which stimulate discussion on a wide range of factors within the disciplines of business economic and social history

Change, Transformation and Development J. Stan Metcalfe,Uwe Cantner,2012-12-06 For as long as one can remember the edifice of the neoclassical economic syn thesis has been under attack Critiques have focused on the extreme unreality of the assumptions that underpin the Arrow Debreu theorems of welfare economics They have queried the excessive formalism of

the edifice and the lack of practical significance of many of the results They have castigated the neoclassical synthesis for its internal incoherence lacking an independent theory of capital for example one of the favorite topics of the Cambridge school its lack of a dynamic element its non evolutionary character its lack of any conception of market process and so the list could be continued Blaug 1997 Through all this the neoclassical synthesis remains as strong as ever impervious it seems to these or any other attacks In this paper a different tack is taken The neoclassical edifice is left alone standing as a representation of what goes on in a certain kind of economy namely the economy where goods and services are produced and exchanged The paper then introduces another kind of economy namely an economy of productive entities called resources that are needed to produce the economy of goods and services

Corporate Capital Christos Pitelis, 2004-08-19

This book looks at the role of the modern corporation in advanced capitalist countries In particular it considers corporate control and share ownership and the impact of these on consumers choice the mobilization of financial capital the saving function and the question of the potentially inherent tendency towards stagnation and crisis The author suggests that there is a tendency towards social ownership of the means of production in modern capitalist economies directly via share purchase and indirectly via e.g. occupational pension funds while at the same time control and appropriation remain vested in a small minority This is shown to affect financial capital accumulation and the saving function since the competition between giant

corporations encourages their controllers to increase corporate saving above the level desired by small shareholders who are suggested to be unable fully to compensate for such increases by their actions **The Economics and Management of Technological Diversification** John Cantwell, Alfonso Gambardella, Ove Granstrand, 2004-04-22 And conclusions Further bibliography Index
