Grady, Francesco Parisi, 2006 Cybersecurity is an increasing problem for which the market may fail to produce a solution The ultimate source is that computer owners lack adequate incentives to invest in security because they bear fully the costs of their security precautions but share the benefits with their network partners In a world of positive transaction costs individuals often select less than optimal security levels The problem is compounded because the insecure networks extend far beyond the regulatory jurisdiction of any one nation or even coalition of nations This book brings together the views of leading law and economics scholars on the nature of the cybersecurity problem and possible solutions to it Many of these solutions are market based but they need some help either from government or industry groups or both Indeed the cybersecurity problem prefigures a host of 21st century problems created by information technology and the globalization of markets
