Political Economy of Population Aging Kimiko Terai,Amihai Glazer,Naomi Miyazato,2021-09-21 This book integrates the economics of aging and insight based on political economy and explores generational conflict in the context of governmental spending This problem is general as the Covid 19 pandemic has highlighted lockdowns protect the elderly but hurt the young Policies to address global warming impose taxes on the elderly but would bring benefits largely in the future This book addresses intergenerational problems by placing its focus on budget allocation taxation and regulation By using Japanese and US data the authors conduct statistical analysis of whether regions with aging populations may adopt policies that generate benefits during a short period of time instead of policies that could benefit current young generations for an extended period of time If the policy preferences of voters depend on their age and if policy adoption by a government reflects public opinion the change in demographic composition in a region may affect governmental policies In an aged society the elderly are pivotal voters Budgets may be reallocated from policies favored by younger generations such as education to policies the elderly prefer such as welfare programs This generates an intergenerational externality problem voters with short life expectancy do not take into consideration long term benefits Moreover the current tax bases may be replaced by other tax bases that do not harm the elderly The results reported in the book largely support these hypotheses Evidence also shows that the gender and racial composition and institutional factors including the extent of fiscal decentralization are important in anticipating effects of population aging in other countries **Handbook of Research on Economic and Social**

The Age of Aging George Magnus,2012-11-27 The year 2008 marks the beginning of the baby boomer retirement avalanche just as the different demographics in advanced and most developing countries are becoming more pronounced People are worrying again that developments in global population trends food supply natural resource availability and climate change raise the question as to whether Malthus was right after all The Age of Aging explores a unique phenomenon for mankind and therefore one that takes us into uncharted territory Low birth rates and rising life expectancy are leading to rapid aging and a stagnation or fall in the number of people of working age in Western societies Japan is in pole position but will be joined soon by other Western countries and some emerging markets including China The book examines the economic effects of aging the main proposals for addressing the implications and how aging societies will affect family and social structures and the type of environment in which the baby boomers children will grow up The contrast between the expected old age bulge in Western nations and the youth bulge in developing countries has important implications for globalization and for immigration in Western countries two topics already characterized by rising discontent or opposition But we have to find ways of making both globalization and immigration work for all for fear that failure may lead us down much darker paths Aging also brings new challenges for the world to address in two sensitive areas the politicization of religion and the management of international security Governments and global institutions will have to take greater responsibilities to ensure that public policy responses are appropriate and measured The challenges arising within aging societies and the demographic contrasts between Western and developing countries make for a fractious world one that is line with the much debated decline of the West The book doesn't flinch from recognizing the ways in which this could become more visible but also asserts that we can address demographic change effectively if governments and strengthened international institutions are permitted a larger role in managing change

The Aging Population and the Competitiveness of Cities Peter Karl Kresl,Daniele Ietri,2010-01-01 While much of the current literature on the economic consequences of an aging population focuses on the negative aspects this enlightening book argues that seniors can bring significant benefits such as vitality and competitiveness to an urban economy The authors illustrate the ways an aging population can have a positive impact on urban centers including the move by large numbers of seniors from the suburbs to the city where their disproportionate consumption of education and the arts helps rejuvenate city centers Given this the authors conclude that a large and active senior population has the potential to assist a city in the achievement of its strategic economic objectives The book includes analyses of the effects of population aging on best practices in 40 cities in the US and EU with surprising results as well as interviews with city officials and leaders Academics researchers and public officials in the areas of urban development public policy and aging will find much in this original approach to interest and provoke debate

Can We Afford to Grow Older? Richard Disney,1996 On aging and its affect on Society Fiscal Implications of an Aging Population Dieter Bös,Sijbren Cnossen,2012-12-06 Serious research into the causes and implications of an aging

population is a relatively recent phenomenon Though several relevant issues of aging have received considerable attention in public and political discussions especially in European countries and in Japan the economics profession is somewhat lacking behind This is particularly true for the theoretical underpinnings of the economics of population aging Until now the aging debate is primarily led by institutionalists The present book with its analytical and econometric studies on fiscal implications of population aging is an important step in the process of theoretical analysis of aging It is of interest both for population economists and demographers and for public economists providing a bridge between these areas of research *Aging*

is in the midst of a major demographic shift In the coming decades people aged 65 and over will make up an increasingly large percentage of the population The ratio of people aged 65 to people aged 20 64 will rise by 80% This shift is happening for two reasons people are living longer and many couples are choosing to have fewer children and to have those children somewhat later in life The resulting demographic shift will present the nation with economic challenges both to absorb the costs and to leverage the benefits of an aging population *Aging and the Macroeconomy* Long Term Implications of an Older Population presents the fundamental factors driving the aging of the U S population as well as its societal implications and likely long term macroeconomic effects in a global context The report finds that while population aging does not pose an insurmountable challenge to the nation it is imperative that sensible policies are implemented soon to allow companies and

households to respond It offers four practical approaches for preparing resources to support the future consumption of households and for adapting to the new economic landscape Aging, Economic Growth, and Old-age Security in Asia
Donghyun Park,Sang-Hyop Lee,Andrew Mason,2012-01-01 Population aging is perhaps the single biggest economic and social obstacle confronting Asia s future The region wide demographic transition towards an older population is fundamentally reshaping the demographic landscape and is giving rise to two key socio economic challenges This timely book provides an in depth analysis of these challenges and presents concrete policy options for tackling them First the expert contributors argue Asia must find ways to sustain rapid economic growth in the face of less favorable demographics which implies slower growth of the workforce Second they contend Asia must find ways to deliver affordable adequate and sustainable old age economic security for its growing elderly population Underpinned by rigorous analysis a wide range of concrete policy options for sustaining economic growth while delivering economic security for the elderly are then presented These include Asia wide policy options relevant to the entire region such as building up strong national pension systems whilst other policy options are more relevant to sub groups of countries This stimulating and informative book will be of great interest to academics students and researchers with an interest in Asian studies economics generally and more specifically public sector economics
