Fast From Gate:

Fast Gates and Mixed-Species Entanglement with Trapped Ions Vera M. Schäfer, 2020-03-04 Quantum logic gates are the crucial information processing operation of quantum computers. Two crucial performance metrics for logic gates are their precision and speed. Quantum processors based on trapped ions have always been the touchstone for gate precision but have suffered from slow speed relative to other quantum logic platforms such as solid state systems. This thesis shows that it is possible to accelerate the logic clock speed from kHz to MHz speeds whilst maintaining a precision of 99.8%. This is almost as high as the world record for conventional trapped ion gates but more than 20 times faster. It also demonstrates entanglement generation in a time 480 ns shorter than the natural timescale of the ions' motion in the trap which starts to probe an interesting new regime of ion trap physics. In separate experiments, some of the first mixed species quantum logic gates are performed both between two different elements and between different isotopes. The mixed isotope gate is used to make the first test of the quantum mechanical Bell inequality between two different species of isolated atoms.

Comprehensive Biophysics, 2012-04-12 Biophysics is a rapidly evolving interdisciplinary science that applies theories and methods of the physical sciences to questions of biology. Biophysics encompasses many disciplines including physics, chemistry, mathematics, biology, biochemistry, medicine, pharmacology, physiology, and neuroscience, and it is essential that scientists working in these varied fields are able to understand each other's research. Comprehensive Biophysics, Nine Volume Set, will help bridge that communication gap. Written by a team of researchers at the forefront of their respective fields under the guidance of Chief Editor Edward Egelman, Comprehensive Biophysics, Nine Volume Set, provides definitive introductions to a broad array of topics uniting different areas of biophysics research from the physical techniques for studying macromolecular structure to protein folding, muscle and molecular motors, cell biophysics, bioenergetics, and more. The result is this comprehensive scientific resource, a valuable tool both for helping researchers come to grips quickly with material from related biophysics fields outside their areas of expertise and for reinforcing their existing knowledge. Biophysical research today encompasses many areas of biology. These studies do not necessarily share a unique identifying factor. This work unites the different areas of research and allows users regardless of their background to navigate through the most essential concepts with ease, saving them time and vastly improving their understanding. The field of biophysics counts several journals that are directly and indirectly concerned with the field. There is no reference work that encompasses the entire field and unites the different areas of research through deep foundational reviews. Comprehensive Biophysics fills this vacuum, being a definitive work on biophysics. It will help users apply context to the diverse journal literature, offering aid in identifying areas for further research. Chief Editor Edward Egelman, EIC Biophysical Journal, has assembled an impressive world class team of Volume Editors and Contributing Authors. Each chapter has been painstakingly reviewed and checked for consistent high quality. The result is an authoritative overview which ties the literature together and provides
