Traffic Congestion Control by PDE Backstepping Huan Yu,Miroslav Krstic,2022-12-16 This monograph explores the design of controllers that suppress oscillations and instabilities in congested traffic flow using PDE backstepping methods The first part of the text is concerned with basic backstepping control of freeway traffic using the Aw Rascle Zhang ARZ second order PDE model It begins by illustrating a basic control problem suppressing traffic with stop and go oscillations downstream of ramp metering before turning to the more challenging case for traffic upstream of ramp metering The authors demonstrate how to design state observers for the purpose of stabilization using output feedback control Experimental traffic data are then used to calibrate the ARZ model and validate the boundary observer design Because large uncertainties may arise in traffic models adaptive control and reinforcement learning methods are also explored in detail Part II then extends the conventional ARZ model utilized until this point in order to address more complex traffic conditions multi lane traffic multi class traffic networks of freeway segments and driver use of routing apps

The final chapters demonstrate the use of the Lighthill Whitham Richards LWR first order PDE model to regulate congestion in traffic flows and to optimize flow through a bottleneck In order to make the text self contained an introduction to the PDE backstepping method for systems of coupled first order hyperbolic PDEs is included Traffic Congestion Control by PDE Backstepping is ideal for control theorists working on control of systems modeled by PDEs and for traffic engineers and applied scientists working on unsteady traffic flows It will also be a valuable resource for researchers interested in boundary control of coupled systems of first order hyperbolic PDEs G Ivan V.
