

Can personality differences explain why people vary in the way they search for and handle information?

In today's society, the capacity and skill to handle information is vital. Despite similar education, people, however, vary in their information literacy skills. This dissertation discusses whether personality traits can explain some of this variation.

The focus is on students' information seeking for their master thesis. The students' motivation for and intention with their studies, are, along with personality traits, considered as influential factors on their information behaviour. Three information-seeking patterns are found in the study - Fast surfers, Broad scanners and Deep divers. These patterns are explained by different personality traits and study approaches.

The main contribution of the dissertation is that it sheds light on how personality traits may incline towards certain information-seeking behaviour. In the concluding discussion the impact of personality traits and study approaches is compared to other influential variables on information-seeking behaviour.
