Fire and Climatic Change in Temperate Ecosystems of the Western Americas Thomas T. Veblen, William L. Baker, Gloria Montenegro, Thomas W. Swetnam, 2006-05-10 Both fire and climatic variability have monumental impacts on the dynamics of temperate ecosystems These impacts can sometimes be extreme or devastating as seen in recent El Niño La Niña cycles and in uncontrolled fire occurrences This volume brings together research conducted in western North and South America areas of a great deal of

collaborative work on the influence of people and climate change on fire regimes In order to give perspective to patterns of change over time it emphasizes the integration of paleoecological studies with studies of modern ecosystems Data from a range of spatial scales from individual plants to communities and ecosystems to landscape and regional levels are included Contributions come from fire ecology paleoecology biogeography paleoclimatology landscape and ecosystem ecology ecological modeling forest management plant community ecology and plant morphology The book gives a synthetic overview of methods data and simulation models for evaluating fire regime processes in forests shrublands and woodlands and assembles case studies of fire climate and land use histories The unique approach of this book gives researchers the benefits of a north south comparison as well as the integration of paleoecological histories current ecosystem dynamics and modeling of future changes

Fire, Climate Change, and Carbon Cycling in the Boreal Forest Eric S. Kaschke, Brian J. Stocks, 2012-08-22 In boreal forests which contain large amounts of the world's terrestrial organic carbon fire is a natural and fundamental disturbance regime essential in controlling many ecosystem processes As a result of predicted climate change in the future the fire regime and consequently the forest cover and carbon storage of boreal regions will undergo dramatic alterations This volume discusses the direct and indirect mechanisms by which fire and climate interact to influence carbon cycling in North American boreal forests The first section summarizes the information needed to understand and manage fire's effects on the ecology of boreal forests and its influence on global climate change issues Following chapters discuss in detail the role of fire in the ecology of boreal forests Subsequent sections present data sets on fire and the distribution of carbon discuss the use of satellite imagery in monitoring these regions and discuss approaches to modeling the relevant processes The book offers the following new results improved estimates of carbon released during fires at a variety of scales from individual sites to the entire North American boreal forest region direct evidence of enhanced soil respiration after fire in Alaskan boreal forests

Treatments and Ecological Restoration ,2003 **A Review of Fire Projects in Indonesia, 1982-1998** Rona

Dennis,1999-01-01 Fire in the wet tropical climate of Indonesia is not a new phenomenon The Great Fire of Borneo in 1982 83 was one of the worst fire events in recent decades Small holders clearing land for cultivation were primarily blamed for starting fires that rapidly spread out of control Subsequent fires linked to El Nino Southern Oscillation occurred in 1987 1991 1994 and most recently in 1997 98 The impact of the latest fire event is immense estimates of the area burnt in 1997 vary between two and five million hectares forest and non forest the number of people affected by smoke haze and fire at 75 million and the total economic costs in the region at as much as US 4 5 billion The 1982 83 fires brought the issue to world attention After 1992 three long term projects were initiated with the objectives of management and monitoring of fires These were the EU Forest Fire Prevention and Control Project in Southern Sumatra 1995 1998 GTZ s Integrated Forest Fire Management Project in East Kalimantan 1994 2000 and JICA s Forest Fire Prevention and Management Project in Bogor Jambi and West Kalimantan 1996 2001 In addition the Indonesia UK Tropical Forest Management Programme started in 1992 and comprised a number of components related to fires as part of its overall improved forest management objective After the 1997 fires numerous short and long term fire projects were proposed and started Others such as the first phase of the WWF project and the ADB s regional RETA and national ADTA projects within a short time frame try to cover many aspects of fire problem such as socio economic assessments fire fighting area estimates economic and policy assessments and ecological assessments Representing a longer term approach CIFOR ICRAF UNESCO propose an in depth study of the underlying causes and effects of fires In addition to the international response Indonesia has several government agencies charged with the task of preventing monitoring and controlling land and forest fires Following the forest and land fires of 1994 the National Coordination Team for Land and Forest Fire Control was established in 1995 Interest in fire is only short lived after a major fire event Before the 1994 fires little attention was paid to the fire problem and missions mainly focussed on control and prevention of fires Most of the new generation of fire projects established in 1997 98 address both issues

Wildland Fire in Ecosystems ,2003 This state of knowledge review about the effects of fire on air quality can assist land fire and air resource managers with fire and smoke planning and their efforts to explain to others the science behind fire related program policies and practices to improve air quality Chapter topics include air quality regulations and fire characterization of emissions from fire the transport dispersion and modeling of fire emissions atmospheric and plume chemistry air quality impacts of fire social consequences of air quality impacts and recommendations for future research

Johnson, 2001-07-12 *Climate Change 2001 The Scientific Basis* is the most comprehensive and up to date scientific assessment of past present and future climate change The report Analyses an enormous body of observations of all parts of the climate system Catalogues increasing concentrations of atmospheric greenhouse gases Assesses our understanding of the processes and feedbacks which govern the climate system Projects scenarios of future climate change using a wide range of models of future emissions of greenhouse gases and aerosols Makes a detailed study of whether a human influence on climate can be identified Suggests gaps in information and understanding that remain in our knowledge of climate change and how these might be addressed This latest IPCC assessment will again form the standard scientific reference for all concerned with climate change and its consequences including students and researchers in all aspects of environmental and atmospheric science and policymakers in governments and industry worldwide **Climate Change 2001: Impacts, Adaptation, and Vulnerability** Intergovernmental Panel on Climate Change. Working Group II., 2001-07-02 Some issues addressed in this Working Group III volume are mitigation of greenhouse gas emissions managing biological carbon reservoirs geo engineering costing methods and decision making frameworks Plant Disturbance Ecology Edward A. Johnson, Kiyoko Miyanishi, 2010-07-20 The media coverage of natural disasters hurricanes fires floods ice storms etc indicates the prevalence of natural disasters in most if not all ecosystems In order for scientists to study understand and ultimately predict how these disturbances affect ecosystems it is necessary for them to know more about the physical processes involved in these disturbances and to learn how to couple these processes to the ecological systems Essential for all ecologists forest researchers and conservation biologists this book includes chapters on the disturbance processes how the disturbance causes necrosis or death to individuals and their effects on population or community processes In *Plant Disturbance Ecology* physical scientists who study disturbances provide an introduction to the physical disturbance processes while ecologists relate this information to the way the vegetation responds to the disturbances This reference is also key for all researchers hydrology geomorphology and environmental management Includes coverage on six different disturbance processes Wind Gravity Geomorphic Hydrologic Combustion and Biotic Provides a clear explanation of how some of the physical processes of disturbance affect plant ecological processes Offers ecologists an up to date understanding of the physical processes and allows them to predict future affects of disturbances Unites two related fields by linking the disturbance processes and ecological responses Presents physical scientists with ideas of how they might usefully apply their knowledge to advance understanding of ecological systems *Land Remote Sensing and Global Environmental Change* Bhaskar Ramachandran, Christopher O. Justice, Michael J. Abrams, 2010-12-14 *Land Remote Sensing and Global Environmental Change* The Science of ASTER and MODIS is an edited compendium of contributions dealing with ASTER and MODIS satellite sensors aboard NASA's Terra and Aqua platforms launched as part of the Earth Observing System fleet in 1999 and 2002 respectively This volume is divided into six sections The first three sections provide insights into the history

philosophy and evolution of the EOS ASTER and MODIS instrument designs and calibration mechanisms and the data systems components used to manage and provide the science data and derived products The latter three sections exclusively deal with ASTER and MODIS data products and their applications and the future of these two classes of remotely sensed observations

Biomass Burning and Its Inter-Relationships with the Climate System John L. Innes, Martin Beniston, Michel M. Verstraete, 2006-04-11 JOHN L INNES University of British Columbia Vancouver Canada The interactions between biomass burning and climate have been brought into focus by a number of recent events Firstly the Framework Convention on Climate Change and more recently the Kyoto Protocol have drawn the attention of policy makers and others to the importance of biomass burning in relation to atmospheric carbon dioxide concentrations Secondly the use of prescribed fires has become a major management tool in some countries with for example the area with fuel treatments which include prescribed burns and mechanical treatments having increased on US National Forest System lands from 123 000 ha in 1985 to 677 000 ha in 1998 Thirdly large numbers of forest fires in Indonesia Brazil Australia and elsewhere in 1997 and 1998 received unprecedented media attention Consequently it is appropriate that one of the Wengen Workshops on Global Change Research be devoted to the relationships between biomass burning and climate This volume includes many of the papers presented at the workshop but is also intended to act as a contribution to the state of knowledge on the int relationships between biomass burning and climate change Previous volumes on biomass burning e g Goldammer 1990 Levine 1991a Crutzen and Goldammer 1993 Levine 1996a 1996b Van Wilgen et al 1997 have stressed various aspects of the biomass climate issue and provide a history of the development of our understanding of the many complex relationships that are involved

Remote Sensing of Biomass Lola Fatoyinbo, 2012-03-28 The accurate measurement of ecosystem biomass is of great importance in scientific resource management and energy sectors In particular biomass is a direct measurement of carbon storage within an ecosystem and of great importance for carbon cycle science and carbon emission mitigation Remote Sensing is the most accurate tool for global biomass measurements because of the ability to measure large areas Current biomass estimates are derived primarily from ground based samples as compiled and reported in inventories and ecosystem samples By using remote sensing technologies we are able to scale up the sample values and supply wall to wall mapping of biomass Three separate remote sensing technologies are available today to measure ecosystem biomass passive optical radar and lidar There are many measurement methodologies that range from the application driven to the most technologically cutting edge The goal of this book is to address the newest developments in biomass measurements sensor development field measurements and modeling

The chapters in this book are separated into five main sections *Sediment Records of Biomass Burning and Global Change* James S. Clark, Helene Cachier, Johann G. Goldammer, Brian J. Stocks, 2013-06-29 Biomass burning profoundly affects atmospheric chemistry the carbon cycle and climate and may have done so for millions of years Bringing together renowned experts from paleoecology fire ecology atmospheric chemistry and organic chemistry the volume elucidates the role of fire during global changes of the past and future Topics covered include the characterization of combustion products that occur in sediments including char soot fly ash and polycyclic aromatic hydrocarbons the calibration of these constituents against atmospheric measurements from wildland and prescribed fire emissions spatial and temporal patterns in combustion emissions at scales of individual burns to the globe *Protected Area Governance and Management* Graeme L. Worboys, Michael Lockwood, Ashish Kothari, Sue Feary, Ian Pulsford, 2015-04-08 Protected Area Governance and Management presents a compendium of original text case studies and examples from across the world by drawing on the literature and on the knowledge and experience of those involved in protected areas The book synthesises current knowledge and cutting edge thinking from the diverse branches of practice and learning relevant to protected area governance and management It is intended as an investment in the skills and competencies of people and consequently the effective governance and management of protected areas for which they are responsible now and into the future The global success of the protected area concept lies in its shared vision to protect natural and cultural heritage for the long term and organisations such as International Union for the Conservation of Nature are a unifying force in this regard Nonetheless protected areas are a socio political phenomenon and the ways that nations understand govern and manage them is always open to contest and debate The book aims to enlighten educate and above all to challenge readers to think deeply about protected areas their future and their past as well as their present The book has been compiled by 169 authors and deals with all aspects of protected area governance and management It provides information to support capacity development training of protected area field officers managers in charge and executive level managers
