of the giant Zeppelin airships that once roamed the sky a story that ended with the fiery destruction of the Hindenburg Genius a definitive tale of an incredible time when mere mortals learned to fly Keith O'Brien The New York Times At the dawn of the twentieth century when human flight was still considered an impossibility Germany's Count Ferdinand von Zeppelin vied with the Wright Brothers to build the world's first successful flying machine As the Wrights labored to invent the airplane Zeppelin fathered the remarkable airship sparking a bitter rivalry between the two types of aircraft and their

innovators that would last for decades in the quest to control one of humanity's most inspiring achievements. And it was the airship, not the airplane, that led the way. In the glittery 1920s, the count's brilliant protégé Hugo Eckener achieved undreamed-of feats of daring and skill, including the extraordinary Round the World voyage of the Graf Zeppelin. At a time when America's airplanes, rickety deathtraps held together by glue, screws, and luck, could barely make it from New York to Washington, D.C., Eckener's airships serenely traversed oceans without a single crash, fatality, or injury. What Charles Lindbergh almost died doing crossing the Atlantic in 1927, Eckener had effortlessly accomplished three years before: the Spirit of St. Louis even took off. Even as the Nazis sought to exploit Zeppelins for their own nefarious purposes, Eckener built his masterwork, the behemoth Hindenburg, a marvel of design and engineering. Determined to forge an airline empire under the new flag, ship Eckener met his match in Juan Trippe, the ruthlessly ambitious king of Pan American Airways, who believed his fleet of next-generation planes would vanquish Eckener's coming airship armada. It was a fight only one man and one technology could win. Countering each other's moves on the global chessboard, each seeking to wrest the advantage from his rival, the struggle for mastery of the air was a clash not only of technologies but of business, diplomacy, politics, personalities, and the two men's vastly different dreams of the future. Empires of the Sky is the sweeping, untold tale of the duel that transfixed the world and helped create our modern age.

Heroes and Landmarks of British Aviation Richard Edwards, Peter J. Edwards, 2012-10-24

Heroes and Landmarks of British Aviation tells the dramatic story of a world-leading aviation industry from the sweat and grease of the workshop to the boardrooms and government nationalisations that ultimately fashioned its destiny. The heroes are Britain's most innovative aviation pioneers and their aircraft: the men and women who persevered to be the first into the air, to fly the fastest, the highest, and the furthest. This broad and highly accessible book ranges from the first man to fly across the English Channel from England to France to the development of the Spitfire and from the disastrous R101 airship to the development of the jet engine and ultimately the world's first supersonic airliner. Each chapter looks at a different aviation pioneer and the flying machines that they designed, their engineering landmarks, their triumphs in the air, and on occasion, their disasters too. The book explores the great air races that were won and lost, the government contracts and political short-sightedness that cut short the development of leading aircraft designs, and many of the dramatic air raids and sea battles from the First World War to the Falklands and the Middle East. Many of the industry's most prominent names are profiled, including Ernest Willows, the Short brothers, Geoffrey de Havilland, Vincent Richmond, George White, Thomas Sopwith, Harry Hawker, R.J. Mitchell, Herbert Smith, Charles Rolls, Henry Royce, Reginald Pierson, Alliott Verdon Roe, Frederick Handley Page, Robert Watson Watt, Robert Blackburn, and Frank Whittle. Behind the personal stories are the histories of the aircraft companies that these pioneers created, from those that went bankrupt to those that lasted the test of time and have become indivisible from British aviation folklore, such as Sopwith, Handley Page, Avro, Supermarine, Blackburn, Bristol, Fairey, and Rolls Royce. The book covers the mergers and acquisitions that led to the creation of two major aircraft manufacturers.

Hawker Siddeley Group and the British Aircraft Corporation and how barely two decades later before the century was out they were nationalised to form British Aerospace

Admiral William A. Moffett

William F Trimble, 2014-10-29 Naval aviation historian William F Trimble provides a clear and detailed portrait of the man who took on the challenge of forming an aeronautical bureau within the U S Navy in 1921 and then nurtured the early development of naval aviation Describing Admiral William A Moffett as one of the first high ranking naval officers to appreciate the importance of the airplane and the effect it would have on the fleet the author contends that the admiral's strong background as a surface officer gave him a credibility and trust with his superiors that others could not match The author attributes Moffett's desire to keep aviation as part of the fleet along with his diplomacy tenacity and political and military savvy to the success of the infant air arm during its formative years In striking contrast to the tactics of Army Gen Billy Mitchell Moffett's handling of the loyalty issue and other politically sensitive topics saved the Navy's air arm according to Trimble The book is equally candid about the admiral's shortcomings including his heavy handed support for airships a technological dead end that squandered millions and led to Moffett's death in 1933 when he went down with the airship
