Regenerative Nephrology Michael S. Goligorsky, 2010-11-26 Progression of chronic diseases in general and chronic kidney disease in particular has been traditionally viewed in the light of various contributors to development of glomerulosclerosis and tubulointerstitial scarring culminating in renal fibrosis Indeed this dogma prevailed for decades underscoring experimental attempts to halt fibrotic processes Breakthrough investigations of the past few years on stem progenitor cell involvement in organ regeneration caused a conceptual shift in tackling the mechanisms of nephrosclerosis It has become clear that the rate of progression of chronic kidney disease is the net sum of the opposing trends degenerative fibrotic processes and regenerative

repair mechanisms The latter part of this equation has been by and large ignored for years and only recently attracted investigative attention This book revisits the problem of kidney disease by focusing on regenerative mechanisms in renal repair and on the ways these regenerative processes can become subverted by an intrinsic disease process eventuating in its progression Cutting edge investigations are summarized by the most experienced international team of experts Presents a comprehensive translational source for all aspects of renal stem cells tissue regeneration and stem cell therapies for renal diseases in one reference work This will ultimately result in time savings for academic medical and pharma researchers Experts in the renal stem cell system in kidney repair and regeneration take readers from the bench research to new therapeutic approaches providing a common language for nephrology researchers fellows and other stem cell researchers This enables the discussion of development of stem cells and their use in the repair and regeneration of the kidney
