Fish Diseases and Disorders P. T. K. Woo, 2006-06-23 Fish is the principal source of protein for people in many parts of the world particularly in developing countries While most fish are caught from nature aquaculture or fish farming is now making a significant contribution to total fish production More intensive conditions of aquaculture often result in a higher incidence of fish diseases and disorders As in the first edition the focus of this second edition is on protozoan and metazoan parasites that cause disease in fish Significant changes to this second edition include the addition of 3 new chapters and 4 of the original chapters have new authors

Woo,Jo-Ann Leong,Kurt Buchmann,2020-09-04 This definitive reference work explores the effects of current and expected climate change taking place throughout the world on selected bacterial viral fungal and parasitic infectious fish diseases of economically important fish in tropical and temperate waters **Field guide to the control of warmwater fish diseases in Central and Eastern Europe, the Caucasus and Central Asia** Food and Agriculture Organization of the United Nations,2019-05-01 Due to the recent rapid development of freshwater aquaculture in the Caucasus Region many new and previously known fish diseases have appeared One of the most prominent features of the region s aquaculture is that it is mostly based on the rearing of cyprinids mainly the common carp *Cyprinus carpio* as well as a few other predatory fish species As a result this book focuses on the diseases that affect these and other important warmwater fish species Although this field guide covers the diseases of warmwater fish of Central and Eastern Europe the Caucasus and Central Asia it also draws upon the extensive knowledge base available for the countries of Central Europe and the former Soviet Union as well as recent research findings from the Islamic Republic of Iran and from Turkey The major warmwater fish species cultured in the region and their health status are discussed and two major categories of disease are recognized biotic and abiotic diseases Although there are numerous biotic diseases abiotic factors e g lack of oxygen temperature feeding mistakes remain the main cause of losses in aquaculture The best practices for the field and laboratory examination of disease outbreaks are reviewed and the importance of accurate and detailed data recording emphasized Prevention as a key factor in avoiding the spread of disease is highlighted and actions to prevent the spread of diseases

between farms regions countries and continents are discussed Possible methods for the treatment of each disease are reviewed unfortunately the chemicals available for use in aquaculture are now rather limited as many of them are hazardous to both the environment and human health Of the viral diseases discussed spring viraemia of carp SVC and koi herpesvirus KHV pose the greatest threats to the world s carp populations Of the bacterial diseases ulcer disease is still the main problem in carp culture while among the parasites Ichthyophthirius multifiliis the cause of white spot disease is among the most important Exotic parasites such as various Thelohanellus species as well as tapeworms belonging to the genera Bothriocephalus and Khawia are responsible for a considerable amount of damage Some diseases of unknown aetiology are also discussed

FISH DISEASES Takashi Aoki,2016-08-05 Fish Diseases theme is a component of Encyclopedia of Food and Agricultural Sciences Engineering and Technology Resources in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias Diseases caused by bacteria viruses and certain parasites have thus far been suggested as the main culprit for declining aquaculture production and are thus deemed responsible to for huge losses amounting to billions of dollars annually There are a number of fish diseases that are of utmost importance due to their debilitating effects on both cultured and marine fish and includes Streptococcosis caused by a number of Steptococcus spp Furunculosis Vibriosis Edwasiellosis Mycobacteriosis Nocardiosis to name a few The need to prevent and counteract the effect of these diseases is therefore of paramount importance In recent years we saw the increase in studies focusing on fish diseases particularly on those involved in unveiling the etiological agents of the diseases and how to properly treat or eradicate them which often involved chemotherapy or administration of antibiotics To lessen the use of antibiotics which arguably brings with it harmful side effects a lot have been put into the development of effective prophylactic methods against fish diseases such as vaccines and also on finding efficient and reliable means of diagnosing the disease The volume covers in detail the various diseases in fish and shellfish caused by bacteria and viruses The contributing authors of each section have had extensive experience with fish diseases and have outlined what we need to know regarding a particular disease in a manner that is both easy to understand and apply In Chapter 1 the various methods for disease diagnosis prevention including vaccination and treatment of fish diseases are discussed Chapter 2 includes and presents the various ways fish and shellfish protect themselves or fight off disease causing pathogens through their immune systems Chapters 3 and 4 describe the diseases caused by bacterial pathogens in inland water or freshwater and marine water respectively These chapters include the identification of bacterial species responsible for the diseases and how to properly diagnose and treat them Chapter 5 presents fish diseases caused by viral pathogens their etiological agents diagnosis and treatment
