producing industry in the world is looked upon for alleviating the malnutrition especially among the under privileged population. However, intensive aquaculture practices have led to increased incidences of diseases and significant production losses. Among various health management measures employed in aquaculture, vaccination has been proven to be the best approach to protect fish against pathogens. It is considered to be safe and is a key factor for sustainable aquaculture. In this background, apart from the basic understanding of fish and shellfish immune system, updated knowledge on various types of vaccines and the vaccination strategies currently employed in aquaculture are also covered. The book is designed to provide the latest and comprehensive knowledge on all these aspects as a compiled resource material which is useful to students, researchers, and other professionals in the field of aquaculture.

Fish Vaccines Alexandra Adams, 2016-10-19. This book provides a useful text for research students and scientists on the latest knowledge about the immune system of fish, cutting edge technologies, and the steps required to develop and commercialise fish vaccines. It brings together information that is currently difficult to obtain in one book and highlights problem areas and research topics that still need to be addressed to improve future vaccines.

Fish Diseases (2 Vols.) Jorge Eiras, Helmut Segner, Thomas Wahli, 2008-01-09. Diseases are a major threat to both wild and farmed fish. Pathogen-induced alterations in viability and growth of wild fish stocks can have implications on diversity and ecological status of aquatic ecosystems as fish are main components of aquatic communities and they can directly affect the exploitation of wild and farmed fish as a protein source.

Fish Immunology Margaret J. Manning, Mary F. Tatner, 2014-06-28. Fish Immunology contains the proceedings of a symposium organized by the Fisheries Society of the British Isles held in Plymouth, England, 11-13 July 1983. This volume contains 29 chapters and opens with a study on the prevention of disease outbreak or treatment of disease in fish farms with drugs or chemicals. Separate chapters follow on topics such as immune phenomena in Teleostei or Anura, phagocytosis in fish, the granulocytes of three elasmobranch species namely *Scyliorhinus canicula*, *Raja clavata*, and *R. microcellata*, and phagocytic cells in the dogfish *Scyliorhinus canicula* I and levels of a precipitin in two groups of wild fish, a group believed to be suffering from Ulcerative Dermal Necrosis (UDN) and a healthy group showing no external evidence of disease. Subsequent chapters deal with sequential antigenic competition in teleosts challenged with the fish furunculosis bacterium *Aeromonas salmonicida*, the occurrence of vaccine uptake at the skin surface of rainbow trout, and vaccination and development of immunological memory in carp.

Principles of Fish Immunology Kurt Buchmann, Christopher J. Secombes, 2022-03-12. This textbook provides a highly accessible and concise overview on the innate and adaptive immune systems in fish, as well as on fundamentals and latest developments in fish vaccinology. It introduces the anatomy and molecular functions of immune organs and furthermore examines in detail the interactions between the host immune systems and different types of pathogens. The textbook is essential reading for students in Veterinary Fish Medicine, Aquaculture, and Immunology. Furthermore, the volume serves as a quick reference for Fish Pathologists and Aquaculturists.
