## **Ecology Of Tropical Lakes And Rivers:**

**The Ecology of Tropical Lakes and Rivers** A. I. Payne, 1986-09-17 A self contained text reviewing tropical limnology Discusses a number of communities in detail including plankton benthic regions and the water margins Introduces the characteristic types and assemblies of animals and plants from tropical communities The measurement and relative magnitude of such quantifiable aspects as abundance biomass primary production secondary production and decomposition are all outlined drawing together the diverse threads of freshwater ecology over one of the earth s climatic belts Deals with use and abuse of water in the tropics and looks at problems of diversity and diversification in tropical waters **East African Ecosystems and Their Conservation** T. R. McClanahan, T. P. Young, 1996 East Africa is one of the most diverse and interesting tropical area on the planet It is home not only to the last great megafaunal assemblage but also to human populations with the highest growth rates This book draws on the expertise of leading ecologists each intimately familiar with a particular set of East African ecosystems to provide the first in depth and integrated account of the ecology management threats and conservation of these diverse ecosystems Summarizing the tremendous wealth of scientific research that has come out of East Africa in the last few decades each chapter analyses a given ecosystem type taking the reader through the basics of its ecology its historical use and misuse by humans and its prospects for conservation Throughout the book linkages and similarities among ecosystems are emphasized the historical and contemporary role of humans in shaping these ecosystems is considered fundamental principles of ecology are considered and interesting case studies are highlighted Students and researchers in ecology conservation biology and environmental sciences will find this book useful in their work

**The Lakes Handbook** Patrick O'Sullivan, C. S. Reynolds, 2008-04-15 Continuing concern about water supply and quality ecosystem sustainability and restoration demands that the modern approach to the management of lakes and reservoirs should be based on a sound understanding of the application of the scientific and ecological principles that underlie freshwater processes The Lakes Handbook provides an up to date overview of the application of ecologically sound approaches methods and tools using experience gained around the world for an understanding of lakes and their management Volume one of the Handbook addresses the physical and biological aspects of lakes pertinent to lake management emphasising those aspects particularly relevant to large still bodies of water Volume two then considers lake management with particular emphasis on sustainability restoration and rehabilitation This handbook will be invaluable to ecologists environmental scientists physical geographers and hydrologists involved in limnological research as well as advanced undergraduate and graduate students looking for authoritative reviews of the key areas of limnological study

**River and Stream Ecosystems of the World** Colbert E. Cushing, Kenneth W. Cummins, G. Wayne Minshall, 2006-02-06 This is a synopsis and review of the major rivers of the world **Phytoplankton in Turbid Environments: Rivers and Shallow Lakes** J.-P. Descy, Colin S. Reynolds, Judit Padisák, 2013-04-17 The ecology of potamoplankton has received less attention than

lake plankton These proceedings produce a synthesis of the composition community structure and dynamics of lotic phytoplankton which are intuitively submitted to a strong physical control in the flowing environment perceived as much more disturbed than a lake even than a well mixed shallow one It turns out that the boundary between the phytoplankton of rivers and lakes is not as clear cut as was thought In particular most contributions provide arguments emphasizing the prominent role of physical control in both aquatic systems especially due to the steep light gradient resulting from turbulent mixing in a turbid water column Similarities and differences between potamoplankton and limnoplankton largely based on the information gathered by the contributors are discussed in the introductory paper by Reynolds et al

**The Rivers of Florida** Robert J. Livingston, 2012-12-06 This book addresses basic questions concerning the ecological relationships and current conditions of the major river systems in Florida There have been relatively few comprehensive studies made of the rivers of Florida There is to be sure voluminous information that addresses various aspects of riverine ecology However little such information has been collected in a way that allows even a preliminary understanding of the driving forces that determine how the diverse freshwater and associated brackish systems function This lack of useful data is the product of a fundamental ignorance concerning the scale of endeavor both spatially and temporally that is needed if we are to understand and parenthetically manage the major drainage systems of this area of the country Livingston 1987 Research used to address management problems should entail a continuous series of interrelated studies descriptive and experimental that answer the immediate and often less important questions that are asked on a day to day basis The research should also be designed to answer questions that have not yet been asked In other words ecosystem research should be organized on an appropriate scale so that system wide processes are understood and pr

**Ecohydrology & Hydrobiology**, 2001 The international journal Ecohydrology target ecological principle necessity of enhancing ecosystem absorbing capacity and ecosystem services and management tool ecological engineering the use of ecosystem properties for regulation the interplay between hydrology and biota The journal encourages the submission of manuscripts which adopt an integrative approach to aquatic sciences explaining ecological and hydrological processes at a river basin scale or propose practical applications of this knowledge It will also consider papers in other hydrobiological fields Especially welcome are papers on regulatory mechanism within biocenosis and the resistance and resilience of freshwater and costal zones ecosystems There is no page charge for published papers All submitted papers written exclusively in English should be original works unpublished and not under consideration for publication elsewhere All papers are peer reviewed The following types of papers are considered for publication in E H original research papers invited or submitted review papers short communications

*An International Perspective on Wetland Rehabilitation* W.J. Streever, 2012-12-06 Bill Streever author of Bringing Back the Wetlands and numerous technical articles about wetland restoration and creation worked for two years to bring together this collection of papers Authors ranging from private landowners to government managers to scientists present regional overviews case

studies and discussions of various issues Regional overviews cover areas as small as the Commonwealth of the Northern Mariana Islands to areas as large as Australia and Africa Case studies range from relatively small projects such as rehabilitation of damage caused by wheel ruts in the high arctic to much larger projects such as attempts to rehabilitate thousands of hectares of Northern Territory wetlands in Australia Seedbank ecology economics remote sensing community involvement the role of the wetland consulting industry and other issues are discussed In an effort to synthesize information from around the world Joy Zedler presents a model that allows comparison of projects and may lead to better predictability of project outcomes In *An International Perspective on Wetland Rehabilitation* authors describe planting engineered structures prescribed flooding excavation and other rehabilitation methods from Israel to New Zealand to the Netherlands and elsewhere For the first time one volume offers an impression of the magnitude and diversity of the field of wetland rehabilitation around the globe

*Global Perspectives on River Conservation* P. J. Boon, B. R. Davies, Geoffrey E. Petts, 2000-10-03 Throughout the world river conservation is becoming an increasingly important concern In arid regions for instance rivers often form the only water resource for human sustenance indeed the World Bank has predicted that future wars will be about water In many parts of the developing world rivers are used as repositories for waste and river ecosystems consequently reflect the worst excesses of human exploitation In the industrialised nations the focus of attention is beginning to move from chemical clean up to restoring the structural damage to rivers caused by decades of river engineering Recognition is growing that river management needs a catchment wide perspective if the needs of human populations river habitats and wildlife are to reach a sustainable balance The development of river conservation strategies has become a global

imperative Global Perspectives on River Conservation is the first book that provides a truly global synthesis of knowledge on river conservation with the aim of encouraging strategic river planning. It does this in two ways. First, it sets out a worldwide region by region overview of the science, policy and practice of river conservation. Second, it provides a topical review of different river settings such as tropical, temperate, temporary, perennial, large, small and contemporary issues in river conservation such as classification and evaluation, environmental legislation, the role of public participation. Global Perspectives on River Conservation is an invaluable reference for river managers, planners and developers, conservationists, statutory water agencies, government departments, academics, researchers, postgraduates and final year undergraduates working in the field of environmental management of inland waters.
