**Dynamic Games and Applications in Economics** Tamer Başar, 2012-12-06 This volume contains eleven articles which deal with different aspects of dynamic and differential game theory and its applications in economic modeling and decision making All but one of these were presented as invited papers in special sessions I organized at the 7th Annual Conference on Economic Dynamics and Control in London England during the period June 26 28 1985 The first article which comprises Chapter 1 provides a general introduction to the topic of dynamic and differential game theory discusses various noncooperative equilibrium solution concepts including Nash Stackelberg and Consistent Conjectural Variations equilibria and a number of issues such as feedback and time consistency The second chapter deals with the role of information in Nash equilibria and the role of leadership in Stackelberg problems A special type of a Stackelberg problem is the one in which one dominant player leader acquires dynamic information involving the actions of the others followers and constructs policies so called incentives which enforce a certain type of behavior on the followers Chapter 3 deals with such a class of problems and presents some new theoretical results on the existence of affine incentive policies The topic of Chapter 4 is the computation of equilibria in discounted stochastic dynamic games Here for problems with finite state and decision spaces existing algorithms are reviewed with a comparative study of their speeds of convergence and a new algorithm for the computation of nonzero sum game equilibria is presented

**Recent Policy Issues in Environmental and Resource Economics** Peter Michaelis, Frank Stähler, 2012-12-06 Peter Michaelis and Frank Stähler This book deals with recent policy issues in environmental and resource economics To collect articles on recent policy issues is of course always also a question of taste This volume tries to represent a broad range of papers which covers the double dividend hypothesis the role of non profit organizations for environmental policies trade implications and international environmental agreements It consists of two parts a part on domestic policy issues and a part on international policy issues A separate part on international policy issues would not have been on the agenda when this volume would have been published two decades ago But international and global environmental problems are different from purely national problems and deserve a special approach However also domestic policies face new challenges One new focus of domestic policies is the discussion on the relationship between environmental benefits and other policy objectives Some Remarks on the Double Dividend Hypothesis by Christian Scholz deals with this discussion In opposition to a number of recent papers it is

found that the possibility for a double dividend depends largely on the substitutability characteristics of taxed commodities
