Economic Thresholds for Integrated Pest Management Leon G. Higley, Larry P. Pedigo, 1996-01-01 Selected bibliography economic decision level literature 1959 1993 compiled by Robert K D Peterson P 297 312 **Economic Thresholds of Insect Pests** Saskatchewan. Saskatchewan Agriculture and Food, 1999 **Integrated Pest Management** Dale G. Bottrell, Council on Environmental Quality (U.S.), 1979 Integrated pest management IPM is the selection integration and implementation of pest control based on predicted economic ecological and sociological consequences IPM seeks maximum use of naturally occurring pest controls including weather disease agents predators and parasites In addition IPM utilizes various biological physical and chemical control and habitat modification techniques Artificial controls are imposed only as required to keep a pest from surpassing intolerable population levels predetermined from accurate assessments of the pest damage potential and the ecological sociological and economic costs of the control measures The presence of a pest species does not necessarily justify action for its control and in fact tolerable infestations may be desirable providing food for important beneficial insects for example **The Economics of Integrated Pest Management of Insects** David W Onstad, Philip Crain, 2019-09-02 The book begins by establishing an economic framework upon which to apply the principles of IPM Then it looks at the entomological applications of economics specifically economic analyses concerning chemical biological cultural and genetic control tactics as well as host plant resistance and the cost of sampling Lastly it evaluates whether the control provided by a traditional IPM system is sufficient or if changes to the system design would yield greater benefits **Integrated Pest Management** Edward B. Radcliffe, William D. Hutchison, Rafael E. Cancelado, 2009 This textbook presents theory and concepts in integrated pest management complemented by two award winning websites covering more practical aspects **Integrated Pest Management for Developing Countries** Chigozie Jesse Uneke, 2007 Pests are defined purely from anthropocentric perspective An organism is not considered a pest until its activities and life processes interfere with human health convenience comfort or profits The importance of health education in the control of vector borne diseases cannot be overstated This should particularly be targeted at rural communities where the scourges of these diseases are most pronounced With adequate commitment by the government at the federal state and local levels as well as from private sectors considerable success could be achieved in the battle against pests This book represents an excellent addition to the literature on Integrated Pest Management IPM A historical overview traces the origins and concepts of pest organisms their classification and general characteristics and the basic terminologies are given The philosophy and goal of IPM and specific examples of chemical cultural biological physical and mechanical approaches to IPM are discussed The book is enriched with accounts of IPM practices and progression in the developing countries and the problems and prospects of implementation and the future of IPM highlighted Also included is an interesting account of medical important arthropods and their management A rich bibliography accompanies every chapter **Handbook of Pest Management**
