ways we produce finance and trade goods and services are profoundly shaped by technologies of communication transportation and trade Globalization encourages hyper specialization lavishly rewarding those with the skill sets to serve the global marketplace and punishing those poorly positioned to compete Globalized systems have created great prosperity along with instability vulnerability and backlash Few genuinely understand the complex underpinnings of our international economic system and these specialists tend to operate in isolated silos of finance trade and production But without appreciating how systems come together we cannot explain political reactions against the costs of globalization such as the Brexit vote or the rise of Donald Trump We don't value the changing geo economic importance of the developing world nor the deep threat to ecosystems This book is the first to emphasize the interrelated economic aspects of globalization from an interdisciplinary perspective By placing an introduction to trade finance and multinational production in the same text that discusses the changing role of developing countries and the challenges to the environment the authors provide the novice with the basics to understand the global economy while also challenging advanced students to appreciate global connectivity Closing the knowledge gap in international economics the authors present the historical context interdisciplinary grounding and competing political perspectives needed to encourage sound critical thinking around contemporary globalization They provide the essential global economic tools to equip all readers to make decisions that may foster a fairer more sustainable global system
