examines regional indigenous trees from a forestry specialist's unique perspective. He explains basic tree physiology and a key part of their ecology, forest stand dynamics. He groups distinctive varieties into sections describing common lowland conifers and broadleaved trees, high elevation species found in the Olympic Mountains and western side of the Cascades, and finally those with a very limited natural range and small isolated populations. Numerous full color photographs illustrate key traits. In addition, Zobrist discusses notable features offering information about where to find particular species. He includes brief lists of some common human uses, citing Native American medicines, food, and materials, as well as commercial utilization from the time of European settlement to the present day. The result is a delightful and enlightening exploration of western Washington timberlands.
