The Physics of The Biblical Flood , Chemical Structure of Pelagic Redox Interfaces Evgeniy V. Yakushev, 2012-09-14 Over the last few decades many studies have focused on the oxygen depletion of coastal and oceanic waters An understanding of the processes involved is fundamental to assess the effects of global and climatic changes and to support an ecosystem approach to adaptive environmental management for coastal seas and ocean basins This timely book presents the state of the art of our knowledge of the nature and chemical structure of redox interfaces in a marine water column oxygen depletion and connected processes The structures of the redox layers including the distribution of certain parameters and microbiological features are described in detail The volume also covers studies devoted to the interannual variability of some oxygen depleted systems modeling and new developments in observation techniques In addition it identifies remaining gaps in our knowledge of the cycling of chemical elements in changing redox conditions The chapters are based on extensive observational data collected by the authors during sea and shore expeditions on archive data and on a broad range of scientific literature

An Assessment of Assessments , 2009 Despite the central role oceans play in the economic environmental and social affairs of the planet s 6 7 billion inhabitants significant gaps exist in our understanding and management of the complex processes at work from the global climate system to the water cycle and circulation of nutrients to changes affecting marine habitats In addition the vastness of the world s oceans have for far too long been perceived as impervious and indestructible to human impact To deal with this situation improved monitoring and observation practices regular assessments to provide a deeper understanding of the status and trends of environmental changes and the know how and ability to prevent mitigate and adapt to these changes are urgently required The UN General Assembly in 2005 recommended that a regular process for the global reporting and assessment of the state of the marine environment including its socio economic aspects Regular Process be initiated The UN Environment Programme UNEP and the Intergovernmental Oceanographic Commission of UNESCO IOC UNESCO were asked to serve as the lead agencies in the start up phase that came to be known as the Assessment of Assessments AoA Under the AoA an Expert Group have developed options and a framework for such a Regular Process which can serve as the

The Eastern Mediterranean as a Laboratory Basin for the Assessment of Contrasting Ecosystems P.M. Malanotte-Rizzoli, Valery N. Eremeev, 2012-12-06 This book is the outcome of a NATO Advanced Research Workshop on The Eastern Mediterranean as a laboratory basin for the assessment of contrasting ecosystems that was held in Kiev Ukraine March 23-27 1998 The scientific rationale of the workshop can be summarized as follows The Eastern Mediterranean is the most nutrient impoverished and oligotrophic large water body known There is a well defined eastward trend in nutrient ratios over the entire Mediterranean that starts at the Gibraltar Straits and through the western basin proceeds to the Ionian and Levantine Seas Supply of nutrients to the entire Mediterranean is limited by inputs from the North Atlantic and various river systems along the sea The unique feature of the Mediterranean is the presence of an eastward longitudinal trend in available nitrate phosphate ratios This apparently induces a west to east variation in the structure of the pelagic food web and trophic interactions In this context the Mediterranean and in particular its Eastern basin provides probably a unique platform to explore the hypotheses related to the suggested phosphate limitation on production and to the shift between microbial and classical modes of operation of the photic food web The major exception of the overall oligotrophic nature of the Eastern Mediterranean is the highly eutrophic system of the Northern Adriatic Sea Here during the last two decades the discharges of the northern rivers especially of the Po together with municipal sewage have led to a very marked increase of nutrients and subsequent important eutrophication events

Kostianoy, 2014-09-30 This publication is devoted to the natural feature the Black Sea and its littoral states At the same time the Azov Sea is also considered here This region is the focus of many geopolitical economic social and environmental issues that involve not only the countries coming out to the Black and Azov Seas but other world countries too This publication contains over 1500 articles and terms providing descriptions of geographical and oceanographic features cities ports transport routes marine biological resources international treaties national and international programs research institutions historical and archaeological monuments activities of prominent scientists researchers travelers military commanders etc who had relation to the Black Sea It includes a multi century chronology of the events that became the outstanding milestones in the history of development of the Black Sea Azov Sea region

Aquatic Invasions in the Black, Caspian, and Mediterranean Seas Henri J. Dumont, Tamara A. Shiganova, Ulrich Niermann, 2006-04-11 The present volume contains the presentations of a NATO advanced Research Workshop ARW entitled The invasion of the Black Mediterranean and Caspian Seas by the American Ctenophore Mnemiopsis leidyi Agassiz a multidisciplinary perspective and a comparison with other aquatic invasions held on 24-26 June 2002 in Baku Azerbaijan The meeting was nanced by the NATO Division for Scientific and Environmental Affairs Brussels substantial logistic support was provided by the CEP Caspian Environmental Program of the GEF in Baku The Mediterranean Black and Caspian Seas represent three fragments of the former Tethys Sea and are thus of great interest to understanding the evolution of the entire region where Eurasia Africa and the Arabian Peninsula meet While the Mediterranean is a typical marine environment with salinity even a little above the world ocean s the Black Sea is a brackish meromictic lake and the Caspian is a lake with a saline gradient extending from a freshwater basin in the North to a brackish water basin in the South Intense shing activity takes place in all three seas while maritime traf c through the Dardanelles and Bosphorus and via the Lenin Canal between the Don and Volga rivers to the Caspian Sea has become greatly intensi ed in the course of the last few decades

Invasive Aquatic Species of Europe. Distribution, Impacts and Management Erkki Leppäkoski, Stephan Gollasch, Sergej Olenin, 2013-06-29 The global scale of alien species invasions is becoming more and more evident in the beginning of the new millennium Though the problem of biological invasions became a rapidly growing research area there are large gaps still both geographically and the matically to be filled in the near future This book is the first attempt to provide an overall picture of aquatic species invasions in Europe Its geographical scope stretches from Irish waters in the west to Volga River and the Caspian Sea in the east and from Mediterranean in the south up to the Arctic coast of Europe Not all parts of the continent could be equally covered as in some countries species invasions are not studied yet The book tends to represent the array of all major European aquatic systems on the broadest geographical and ecological scope possible from fully saline seas semi enclosed brackish water bodies and coastallagoons to freshwater lakes major river systems and waterways The key objectives include the present status and impacts caused by non native aquatic species in

European waters Please note that lengthy species lists submitted for publication and additional information were put on the Internet as the electronic version of these tables benefits from computer assisted search for data <http://www.ku.lt/nemoEuroAquaInvaders.htm> Altogether more than 100 scientists from 24 countries have joined to synthesize the available information on bioinvasions However the book does not claim to be fully comprehensive

Jellyfish Blooms: Causes, Consequences and Recent Advances Kylie A. Pitt, Jennifer E. Purcell, 2009-03-31 Jellyfish form spectacular population blooms and there is compelling evidence that jellyfish blooms are becoming more frequent and widespread Blooms have enormous ecological economic and social impacts For example they have been implicated in the decline of commercial fisheries they block the cooling water intakes of coastal industries and ships and reduce the amenity of coastal waters for tourists Blooms may be caused by overfishing climate change and coastal pollution which all affect coastal waters around the world *Jellyfish Blooms Causes Consequences and Recent Advances* presents reviews and original research articles written by the world's leading experts on jellyfish Topics covered include the evolution of jellyfish blooms the impacts of climate change on jellyfish populations advances in acoustic and molecular methods used to study jellyfish the role of jellyfish in food webs and nutrient cycles and the ecology of the benthic stages of the jellyfish life history This is a valuable resource for students and professional marine biologists fisheries scientists oceanographers and researchers of climate change

The Black Sea Flood Question: Changes in Coastline, Climate and Human Settlement Valentina Yanko-Hombach, Allan S. Gilbert, Nicolae Panin, Pavel M. Dolukhanov, 2006-11-15 Stimulated by Noah's Flood Hypothesis proposed by W Ryan and W Pitman in which a catastrophic inundation of the Pontic basin was linked to the biblical story leading experts in Black Sea research including oceanography marine geology paleoclimate paleoenvironment archaeology and linguistic spread provide overviews of their data and interpretations obtained through empirical scientific approaches Among the contributors are many East European scientists whose work has rarely been published outside of Cyrillic Each of the 35 papers marshals its own evidence for or against the flood hypothesis No summary or overall resolution to the flood question is presented but instead access is provided to a broad range of interdisciplinary information that crosses previously impenetrable language

barriers so that new work in the region can proceed with the benefit of a wider frame of reference The three fundamental scenarios describing the late glacial to Holocene rise in the level of the Black Sea catastrophic gradual and oscillating are presented in the early pages with the succeeding papers organized by geographic sector northern Ukraine western Moldova Romania and Bulgaria southern Turkey and eastern Georgia and Russia as well as three papers on the Mediterranean The volume thus brings together eastern and western scholarship to share research findings and perspectives on a controversial subject In addition appendices are included containing some 600 radiocarbon dates from the Pontic region obtained by USSR and western laboratories

Black Sea Oceanography The Oceanography Society, 2005 **Jellyfish Blooms: Ecological and Societal Importance** J.E. Purcell, W.M. Graham, Henri J. Dumont, 2012-12-06 Jellyfish a group that includes scyphomedusae hydromedusae siphonophores and ctenophores are important zooplankton predators throughout the world s estuaries and oceans These beautiful creatures have come to public attention as featured exhibits in aquaria and in news headlines as invaders and as providers of genes used in biomedical research Nevertheless jellyfish are generally considered to be nuisances because they interfere with human activities by stinging swimmers clogging power plant intakes and nets of fishermen and fish farms and competing with fish and eating fish eggs and larvae There is concern that environmental changes such as global warming eutrophication and over fishing may result in increased jellyfish populations The literature reviews and research papers in this volume explore the interactions between jellyfish and humans Papers cover the medical aspects of jellyfish stings jellyfish as human food and jellyfish fisheries interactions of jellyfish and fish effects of environmental changes on jellyfish effects of introduced ctenophores on the Black Sea ecosystem factors causing increases or concentrations of jellyfish and others aspects of jellyfish ecology This is an important reference for students and professional marine biologists oceanographers fishery scientists and aquarists
