Fast Track to MDX Mark Whitehorn, Robert Zare, Mosha Pasumansky, 2007-12-29 IloveBusinessIntelligence
IloveBIbecauseitisallaboutbecomingbetter BI is all about empowering us with knowledge and that knowledge is the power to realize our full potential As Zorge the spy said knowledge is power and who doesn't love to have the power to know to understand and to make intelligent decision I do Since the dawn of the modern information system it was obvious that the information accumulated in the machine is wasted if there is no way to analyze it and learn from it From as early as the 1950s data analysis systems and later decision support systems were designed developed and deployed with that intent However only in the last decade have these systems become both reasonably affordable and mainstream and their business impact indisputable The last decade has also seen the emergence of OLAP as the centerpiece of the BI technologies The OLAP multidimensional databases combine incredible performance with unsurpassed analytical power and in my opinion are the foundation of the BI platform While the performance differences between the multidimensional databases and the traditional relational databases are very significant Moore's law which states that the hardware computing power doubles every 18 months renders this advantage of the OLAP databases temporary Sooner or later the raw computing power of the common server machines will be sufficient to provide the performance needed for sophisticated analysis even when the data is stored in a relational database Expert Cube Development with Microsoft SQL Server 2008 Analysis Services Chris Webb, Alberto Ferrari, Marco Russo, 2009-07-15 Design and implement fast scalable and maintainable cubes with Microsoft SQL Server 2008 Analysis Services with this book and eBook **Applied Microsoft Analysis Services 2005** Teo Lachev, 2005 Knowledge is power As its name suggests the promise of Microsoft SQL Server Analysis Services 2005 is to promote better data analytics by giving information workers the right tool to analyze consistent timely and reliable data Empowered with Analysis Services and Microsoft Business Intelligence Platform you are well positioned to solve the perennial problem with data that there is too much of it and finding the right information is often difficult if not impossible Applied Microsoft Analysis Services 2005 shows database administrators and developers how to build complete OLAP solutions with Microsoft Analysis Services 2005 and Microsoft Business Intelligence Platform Database administrators will learn how to design and manage sophisticated OLAP cubes that provide rich data analytics and data mining services The book gives developers the necessary background to extend UDM with custom programming logic in the form of MDX expressions scripts and .NET code It teaches them how to implement a wide range of reporting applications that integrate with Analysis Services Reporting Services and Microsoft Office This book doesn't assume any prior experience with OLAP and Microsoft Analysis Services It is designed as an easy to follow guide where each chapter builds upon the previous to implement the components of the innovative Unified Dimensional Model UDM in a chronological order New concepts are introduced with step by step instructions and hands on demos What's Inside o Design sophisticated UDM models o Build ETL

processes with SSIS o Implement data mining tasks o Enrich UDM programmatically with MDX o Extend UDM with SSAS stored procedures o Create rich end user model o Optimize Analysis Services storage and processing o Implement dynamic security o Build custom OLAP clients o Author standard and ad hoc reports with SSRS o Build Office based BI applications and dashboards o and much more
