Babar, Matias Vierimaa, Markku Oivo, 2010-06-16 On behalf of the PROFES Organizing Committee we are proud to present the proceedings of the 11 International Conference on Product Focused Software Process Improvement PROFES 2010 held in Limerick Ireland Since the first conference in 1999 the conference has established its place in the software engineering community as a respected conference that brings together participants from academia and industry The roots of PROFES are in professional software process improvement motivated by product and service quality needs The conference addresses both the solutions found in practice as well as relevant research results from academia To ensure that PROFES retains its high quality and focus on the most relevant research issues the conference has actively maintained close collaboration with

industry and subsequently widened its scope to the research areas of collaborative and agile software development. The main themes of this year's conference were Agile and Lean Processes and Engineering Service Oriented Systems. These two main themes enabled us to cover the contemporary software development demands and trends in a comprehensive manner and to tackle the most important current challenges identified by the software industry and software research community namely the shift of focus from products to services. The technical program featured invited talks, research papers and experience reports on the most relevant topics related to processes for developing software intensive services and products. In addition, a number of workshops and tutorials were hosted.

Verified Software: Theories, Tools, Experiments Bertrand Meyer, Jim Woodcock, 2008-06-29. A Step Towards Verified Software. Worries about the reliability of software are as old as software itself. Techniques for allaying these worries predate even James King's 1969 thesis on a program verifier. What gives the whole topic a new urgency is the conjunction of three phenomena: the blitz-like spread of software-rich systems to control ever more facets of our world and our lives; our growing impatience with deficiencies and the development proceeding more slowly; alas, than the other two trends of techniques to ensure and verify software quality. In 2002, Tony Hoare, one of the most distinguished contributors to these advances over the past four decades, came to the conclusion that piecemeal efforts are no longer sufficient and proposed a Grand Challenge intended to achieve over 15 years the production of a verifying compiler, a tool that while processing programs would also guarantee their adherence to specified properties of correctness, robustness, safety, security, and other desirable properties. As Hoare sees it, this endeavor is not a mere research project as might normally be carried out by one team or a small consortium of teams, but a momentous endeavor comparable in its scope to the successful mission to send a man to the moon or to the sequencing of the human genome.
