Finite Elements In Water Resources V:

Hydrology of Fritchie Marsh, Coastal Louisiana Eve L. Kuniansky, 1985 A preliminary study of Fritchie Marsh near Slidell Louisiana was conducted to determine its general hydrology The marsh is being considered as a disposal site for sewage effluent from the city of Slidell Knowledge of the effects of specific locations of the sewage outfall to provide maximum mixing and detention time in the marsh is needed Mixing and detention capabilities of the marsh are dependent upon the flow characteristics for various hydrologic conditions Model results and field data indicate that during neap tide with little or no rain large parts of the marsh are stagnant and sewage effluent at existing and projected flows has minimal effect on marsh flows During a high tide with a 0 5 foot tide differential across the marsh steady state simulations indicate very low velocities with less stagnant water in the marsh *Selected Water Resources Abstracts* ,1991-10 **Open-file**

Hydrology of Fritchie Marsh, Coastal Louisiana ,1985 **Shallow Water Hydrodynamics** W.Y. Tan, 1992-08-17 Within this monograph a comprehensive and systematic knowledge on shallow water hydrodynamics is presented A two dimensional system of shallow water equations is analyzed including the mathematical and mechanical backgrounds the properties of the system and its solution Also featured is a new mathematical simulation of shallow water flows by compressible plane flows of a special virtual perfect gas as well as practical algorithms such as FDM FEM and FVM Some of these algorithms have been utilized in solving the system while others have been utilized in various applied fields An emphasis has been placed on several classes of high performance difference schemes and boundary procedures which have found wide uses recently for solving the Euler equations of gas dynamics in aeronautical and aerospace engineering This book is constructed so that it may serve as a handbook for practitioners It will be of interest to scientists designers teachers postgraduates and professionals in hydraulic marine and environmental engineering especially those involved in the mathematical modelling of shallow water bodies **Transferring Earth Science Information to Decisionmakers** Albert Joseph Froelich, David Carl
