Alan C. Tribble

First American Into Space:

First American Into Space Robert Silverberg, 2008-04-01 Here is the spine tingling true story of that first American blast into the realm of the stars of the men who underwent rigorous training for that epic mission and of the one man who made the safe journey This is the factual account of the history of rocketry its triumphs and its failures our shame in the neglect of it and our pride in its later accomplishments Here too is a glimpse into the future as only science fiction writer Robert Silverberg could foresee orbiting space stations a man on the moon and more [Alan Shepard](#) Tamra Orr, 2003-09 Discusses the life and career of astronaut Alan Shepard a Mercury Seven team member and America's first man into space describes his achievements as a test pilot competitive nature and challenges *Moon Shot* Alan Shepard, Deke Slayton, Jay Barbree, 2011-05-03 New York Times bestseller for fans of First Man A breathtaking insider history of NASA's space program from astronauts Alan Shepard and Deke Slayton Entertainment Weekly On October 4 1957 the Soviet Union launched Sputnik I and the space race was born Desperate to beat the Russians into space NASA put together a crew of the nation's most daring test pilots the seven men who were to lead America to the moon The first into space was Alan Shepard the last was Deke Slayton whose irregular heartbeat kept him grounded until 1975 They spent the 1960s at the forefront of NASA's effort to conquer space and *Moon Shot* is their inside account of what many call the twentieth century's greatest feat landing humans on another world Collaborating with NBC's veteran space reporter Jay Barbree Shepard and Slayton narrate in gripping detail the story of America's space exploration from the time of Shepard's first flight until he and eleven others had walked on the moon [John Glenn](#) Charles River Editors, 2019-06-29 Includes pictures Includes a bibliography for further reading As I hurtled through space one thought kept crossing my mind every part of this rocket was supplied by the lowest bidder John Glenn Today the Space Race is widely viewed poignantly and fondly as a race to the Moon that culminated with Apollo 11 winning the Race for the United States In fact it encompassed a much broader range of competition between the Soviet Union and the United States that affected everything from military technology to successfully launching satellites that could land on Mars or orbit other planets in the Solar System Moreover the notion that America won the Space Race at the end of the 1960s overlooks just how competitive the Space Race actually was in launching people into orbit as well as the major contributions the Space Race influenced in leading to today's International Space Station and continued space exploration In fact the Soviet Union had spent much of the 1950s leaving the United States in its dust President Eisenhower and other Americans who could view Soviet rockets in the sky were justifiably worried that Soviet satellites in orbit could soon be spying on them or even worse dropping nuclear bombs on them In 1960 when Eisenhower's administration began planning and funding for the famous Apollo program that would land the first men on the Moon in 1969 the Soviet Union was already thinking further ahead literally In one of the worst kept secrets of the Space Race the Soviet Union launched two probes Korabl 4 and Korabl 5 toward Mars in October 1960 From 1959 1963 the United States worked toward putting

satellites and humans into orbit via the Mercury program but they continued to lag behind the Soviets With the opening of a new decade the Soviets reinforced their Space Race lead in a big way On April 12 1961 the world watched as the Soviets scored two major victories they sent the first human being into space and made that man the first to orbit the Earth Yuri Gagarin s success seemed to both solidify the Soviet s lead in the Space Race and underline the importance of scientific achievements in the race for geopolitical prestige Even on the other side of the world the United States could not deny the significance of the Vostok mission President Kennedy graciously congratulated the Soviets while privately conceding that it would be impossible for the United States to match Soviet space achievements for some time At the same time American policymakers also understood the depth of this latest defeat in the Space Race On February 20 1962 John Glenn orbited the Earth nearly a year after Gagarin s orbit and he remains best known for that historic feat but in many ways it obscures a life and career of astonishing depth Before the Friendship 7 mission Glenn was already a distinguished combat fighter in multiple wars and he was one of America s best test pilots a record that included making the first supersonic transcontinental flight in American history He was an obvious candidate for the country s first team of astronauts and it launched him not only into space but into a long political career All told Glenn earned too many awards to count and along the way he became the oldest person to fly in space John Glenn The Life and Legacy of the First American Astronaut to Orbit Earth profiles his life chronicles his historic space mission and details all the highlights before and after it Along with pictures of important people places and events you will learn about John Glenn like never before Historic Journeys Into Space Lynn M. Homan, Thomas Reilly, 1999-12-30 From the January 1958 launch of the first American satellite to the creation of the National Aeronautics and Space Administration by President Eisenhower just a few months later from the heated space race of the Cold War era to the heroes of shuttle launches the United States has been on the leading edge of space exploration and technology Initially developed from one of Adolph Hitler s most feared weapons the V2 rocket the space program has accomplished much in just a few short decades The first American manned space flight which put astronaut Alan Shepard into space was launched in 1961 in 1965 Edward White became the first American to walk in space for a total of 21 minutes In 1969 Neil Armstrong uttered those now famous words as he became the first human to walk on the Moon These and many other achievements once considered unimaginable have inspired and amazed the American people and engaged our brightest scientific minds

Echoes Among the Stars: A Short History of the U.S. Space Program Patrick J. Walsh, 2016-04-29 Emphasizing the importance of the space programme to the scientific social and cultural history of the last half of the 20th century this brief history celebrates the almost unimaginable technological leap that the space programme represents a feat of teamwork innovation dedication and mastery unprecedented in the history of mankind Walsh s narrative begins just before the Mercury programme covers the original seven astronauts the Gemini and Apollo programmes through Skylab and up to the space shuttle The glories and emotion of space exploration are presented against the backdrop of the Cold War the presidential

administrations of Eisenhower JFK LBJ Nixon Ford and Carter and other significant events in US history The positive accomplishments of the astronauts are put in context of an increasingly negative domestic situation in the 60s and 70s the Bay of Pigs civil rights assassinations growing involvement in and dissension about Vietnam the Watergate scandal and Nixon's resignation

Gender and the Race for Space Erinn McComb,2025-06-10 The American astronaut image was informed by early Cold War ideals of masculinity that helped mold a distinctly American anti communist masculinity which appeared on the surface anyway to resolve not only an American crisis of masculinity but helped win the Cold War on an ideological and popular level This American image focused on strict gender binaries of man as the protector controlling technology and containing communism while woman was the passive actor with spaceflight technology left behind in the home waiting for the return of the astronaut husband Allowing women to fly into space would have represented a lack of individual control with spaceflight technology
