First Atlas First Reference Series:

Anatomical Atlas of Obstetrics, with Special Reference to Diagnosis and Treatment Oskar Schaeffer, 1901

Atlas of Zebrafish Development Robert Bryson-Richardson, Silke Berger, Peter Currie, 2012 Zebrafish are widely considered an excellent model system for vertebrate development. The embryo is transparent thereby enabling visualization and use of labelling and transgenic approaches. Moreover because of the ease of inducing new mutations in zebrafish and similarity with the human genome this organism may be used effectively for disease studies. For example mutant zebrafish are being utilized for testing drugs that will combat a range of human diseases from Alzheimer's and cancer to kidney failure and congenital heart disease. For the first time this atlas provides the research community with a complete reference for zebrafish anatomy spanning the early embryo all the way to adulthood. The authors employ the technique of optical projection tomography OPT and offer a series of sections in multiple planes from each sample. The contents are organized by developmental stages with over 200 images that contain annotations describing anatomical structures relevant to development. In addition chapters feature explanatory text that highlights major developments in the zebrafish during each stage. Provides the first comprehensive anatomical resource that covers all regions of zebrafish anatomy from the larval period to adulthood. The over 200 images include explanatory notes. Each chapter contains a concise description of key anatomical features that factor in zebrafish development. Despite many years of use as a model system until now there has never been a guide to zebrafish at the larval stage. The book's website contains a database of over 10k sections from different regions as well as 3D images that are interactive.

Forces Medical Journal, 1956 *The History of Cartography, Volume 6* Mark Monmonier, 2015-05-18 For more than thirty years the History of Cartography Project has charted the course for scholarship on cartography bringing together research from a variety of disciplines on the creation dissemination and use of maps. Volume 6 Cartography in the Twentieth Century continues this tradition with a groundbreaking survey of the century just ended and a new full color encyclopedic format. The twentieth century is a pivotal period in map history. The transition from paper to digital formats led to previously unimaginable dynamic and interactive maps. Geographic information systems radically altered cartographic institutions and reduced the skill required to create maps. Satellite positioning and mobile communications revolutionized wayfinding. Mapping evolved as an important tool for coping with complexity organizing knowledge and influencing public opinion in all parts of the globe and at all levels of society. Volume 6 covers these changes comprehensively while thoroughly demonstrating the far reaching effects of maps on science technology and society and vice versa. The lavishly produced volume includes more than five hundred articles accompanied by more than a thousand images. Hundreds of expert contributors provide both original research often based on their own participation in the developments they describe and interpretations of larger trends in cartography.
