Bookseller's catalogues Thomas Arthur (bookseller.), 1856 **Works** John Tillotson, 1716 **Farm Mechanisation and Social Change** Chander Bhan, 1987 Based on the study of a cross section of respondents covering tractor owners bullock owners and non owners of draft power the book tries to show that as compared to other farming sections mechanised farmers have greater use of green revolution as manifested in cropping pattern and intensity use of high yielding varieties fertilizer consumption and farm yields and incomes Suggests that technological advancement if promoted and supported vigorously is likely to eliminate or neutralize the hold of traditional institutional frame work and non scientific beliefs in addition to promoting agricultural production and productivity and rural incomes and employment *Characterization of Minerals, Metals, and Materials 2021* Jian Li, Mingming Zhang, Bowen Li, Sergio Neves Monteiro, Shadia Ikhmayies, Yunus Eren Kalay, Jiann-Yang Hwang, Juan P. Escobedo-Diaz, John S. Carpenter, Andrew D. Brown, Rajiv Soman, Alex Moser, 2021-02-16 The collection focuses on the advancements of characterization of minerals metals and materials and the applications of characterization results on the processing of these materials Advanced characterization methods techniques and new instruments are emphasized Areas of interest include but are not limited to Novel methods and techniques for characterizing materials across a spectrum of systems and processes Characterization of mechanical thermal electrical optical dielectric magnetic physical and other properties of materials Characterization of structural morphological and topographical natures of materials at micro and nano scales Characterization of extraction and processing including process development and analysis Advances in instrument developments for microstructure analysis and performance evaluation of materials such as computer tomography CT X ray and neutron diffraction electron microscopy SEM FIB TEM and spectroscopy EDS WDS EBSD techniques 2D and 3D modelling for materials characterization The book explores scientific processes to characterize materials using modern technologies and focuses on the interrelationships and interdependence among processing structure properties and performance of materials **Basic Virology** Martinez J. Hewlett, David Camerini, David C. Bloom, 2021-04-21 The foundational textbook on the study of virology Basic Virology 4th Edition cements this series position as the leading introductory virology textbook in the world It s easily read style outstanding figures and comprehensive coverage of fundamental topics in virology all account for its immense popularity This undergraduate accessible book covers all the foundational topics in virology including The basics of virology Virological techniques Molecular biology Pathogenesis of human viral disease The 4th edition includes new information on the SARS MERS and COVID 19 coronaviruses hepatitis C virus influenza virus as well as HIV and Ebola New virological techniques including

bioinformatics and advances in viral therapies for human disease are also explored in depth The book also includes entirely new sections on metapneumoviruses dengue virus and the chikungunya virus

Nanoscale Assembly Wilhelm T.S. Huck,2006-07-11 Nanotechnology has received tremendous interest over the last decade not only from the scientific community but also from a business perspective and from the general public Although nanotechnology is still at the largely unexplored frontier of science it has the potential for extremely exciting technological innovations that will have an enormous impact on areas as diverse as information technology medicine energy supply and probably many others The miniturization of devices and structures will impact the speed of devices and information storage capacity More importantly though nanotechnology should lead to completely new functional devices as nanostructures have fundamentally different physical properties that are governed by quantum effects When nanometer sized features are fabricated in materials that are currently used in electronic magnetic and optical applications quantum behavior will lead to a set of unprecedented properties The interactions of nanostructures with biological materials are largely unexplored Future work in this direction should yield enabling technologies that allows the study and direct manipulation of biological processes at the sub cellular level

The Classification of Finite Simple Groups Michael Aschbacher,Richard Lyons ,Stephen D. Smith ,Ronald Solomon ,2011 Provides an outline and modern overview of the classification of the finite simple groups It primarily covers the even case where the main groups arising are Lie type matrix groups over a field of characteristic 2 The book thus completes a project begun by Daniel Gorenstein s 1983 book which outlined the classification of groups of noncharacteristic 2 type

Physics of Semiconductor Devices Simon M. Sze,Yiming Li,Kwok K. Ng,2021-03-24 The new edition of the most detailed and comprehensive single volume reference on major semiconductor devices The Fourth Edition of Physics of Semiconductor Devices remains the standard reference work on the fundamental physics and operational characteristics of all major bipolar unipolar special microwave and optoelectronic devices This fully updated and expanded edition includes approximately 1 000 references to original research papers and review articles more than 650 high quality technical illustrations and over two dozen tables of material parameters Divided into five parts the text first provides a summary of semiconductor properties covering energy band carrier concentration and transport properties The second part surveys the basic building blocks of semiconductor devices including p n junctions metal semiconductor contacts and metal insulator semiconductor MIS capacitors Part III examines bipolar transistors MOSFETs MOS field effect transistors and other field effect transistors such as JFETs junction field effect transistors and MESFETs metal semiconductor field effect transistors Part IV focuses on negative resistance and power devices The book concludes with coverage of photonic devices and sensors including light

emitting diodes LEDs solar cells and various photodetectors and semiconductor sensors This classic volume the standard textbook and reference in the field of semiconductor devices Provides the practical foundation necessary for understanding the devices currently in use and evaluating the performance and limitations of future devices Offers completely updated and revised information that reflects advances in device concepts performance and application Features discussions of topics of contemporary interest such as applications of photonic devices that convert optical energy to electric energy Includes numerous problem sets real world examples tables figures and illustrations several useful appendices and a detailed solutions manual Explores new work on leading edge technologies such as MODFETs resonant tunneling diodes quantum cascade lasers single electron transistors real space transfer devices and MOS controlled thyristors Physics of Semiconductor Devices Fourth Edition is an indispensable resource for design engineers research scientists industrial and electronics engineering managers and graduate students in the field

High Performance Computing in Science and Engineering '02 Egon Krause, Willi Jäger, 2012-12-06 This book presents the state of the art in modeling and simulation on supercomputers Leading German research groups present their results achieved on high end systems of the High Performance Computing Center Stuttgart HLRS for the year 2002 Reports cover all fields of supercomputing simulation ranging from computational fluid dynamics to computer science Special emphasis is given to industrially relevant applications Moreover by presenting results for both vector systems and micro processor based systems the book allows to compare performance levels and usability of a variety of supercomputer architectures It therefore becomes an indispensable guidebook to assess the impact of the Japanese Earth Simulator project on supercomputing in the years to come

Log-Linear Models, Extensions, and Applications Aleksandr Aravkin, Anna Choromanska, Li Deng, Georg Heigold, Tony Jebara, 2024-12-03 Advances in training models with log linear structures with topics including variable selection the geometry of neural nets and applications Log linear models play a key role in modern big data and machine learning applications From simple binary classification models through partition functions conditional random fields and neural nets log linear structure is closely related to performance in certain applications and influences fitting techniques used to train models This volume covers recent advances in training models with log linear structures covering the underlying geometry optimization techniques and multiple applications The first chapter shows readers the inner workings of machine learning providing insights into the geometry of log linear and neural net models The other chapters range from introductory material to optimization techniques to involved use cases The book which grew out of a NIPS workshop is suitable for graduate students doing research in machine learning in particular deep learning variable selection and applications to speech recognition The contributors come from academia and industry allowing readers to view the field from both perspectives Contributors Aleksandr Aravkin Avishy Carmi Guillermo A Cecchi Anna Choromanska Li Deng Xinwei Deng Jean Honorio Tony Jebara Huijing Jiang Dimitri Kanevsky Brian Kingsbury Fabrice Lambert Aur lie C Lozano Daniel Moskovich Yuriy S
