Theory of Differential Equations ...: (vol. IV) Ordinary linear equations. 1902 Andrew Russell Forsyth, 1900 **Polynomial Approximation of Differential Equations** Daniele Funaro, 2008-10-04 This book is devoted to the analysis of approximate solution techniques for differential equations based on classical orthogonal polynomials These techniques are popularly known as spectral methods In the last few decades there has been a growing interest in this subject As a matter of fact spectral methods provide a competitive alternative to other standard approximation techniques for a large variety of problems Initial applications were concerned with the investigation of periodic solutions of boundary value problems using trigonometric polynomials Subsequently the analysis was extended to algebraic polynomials Expansions in orthogonal basis functions were preferred due to their high accuracy and flexibility in computations The aim of this book is to present a preliminary mathematical background for beginners who wish to study and perform numerical experiments or who wish to improve their skill in order to tackle more specific applications In addition it furnishes a comprehensive collection of basic formulas and theorems that are useful for implementations at any level of complexity We tried to maintain an elementary exposition so that no experience in functional analysis is required

Mathematical Modeling Rutherford Aris, 1999-07-16

Mathematical modeling is the art and craft of building a system of equations that is both sufficiently complex to do justice to physical reality and sufficiently simple to give real insight into the situation Mathematical Modeling A Chemical Engineer's Perspective provides an elementary introduction to the craft by one of the century's most distinguished practitioners Though the book is written from a chemical engineering viewpoint the principles and pitfalls are common to all mathematical modeling of physical systems Seventeen of the author's frequently cited papers are reprinted to illustrate applications to convective diffusion formal chemical kinetics heat and mass transfer and the philosophy of modeling An essay of

acknowledgments asides and footnotes captures personal reflections on academic life and personalities Describes pitfalls as well as principles of mathematical modeling Presents twenty examples of engineering problems Features seventeen reprinted papers Presents personal reflections on some of the great natural philosophers Emphasizes modeling procedures that precede extensive calculations *Theory of Differential Equations ...: (vol.
