Obrist,2012-12-06 It was my original intention to write a reasonably advanced psycho physiology text that would go beyond cardiovascular activity This I believed would require a collaborative effort since my expertise outside of cardiovascular psychophysiology is too limited After some initial limited efforts to organize such a venture it became apparent that a text of this nature was not feasible Thus the effort was dropped I did however receive encouragement to write the present monograph which is more a personalized document than a text As will become apparent this monograph relies heavily on research from my laboratory and details the manner in which our conceptualizations of the issues have developed At first I believed such an effort premature since such a personalized document was something one composes upon retire ment However I was persuaded by some individuals who shall re main anonymous just in case they end up regretting their actions to undertake the present effort There are several people who have rendered assistance in the preparation of this monograph for whose efforts I am extremely grate ful Extensive editorial assistance and encouragement were provided by Kathleen C Light and Alberto Grignolo Also assisting editorially were Ellen Z Curtin Allison Cahill and Carolyn Williams I wish also to thank my long time secretary Virginia Hodson and Jenny Adams for their typing assistance There are six people to whom I would like to dedicate this book

Biologics in General Medicine W.-H. Boehncke, H.H. Radeke, 2007-08-09 The idea for this book was born during the symposium on biologics organized by ZAFES Center for Drug Research Development and Safety at the University of Frankfurt am Main in September 2005. Highly distinguished researchers specializing in the field of biologics had gathered together to exchange information on this relatively new subject. Realizing that this symposium was one of the few sources of condensed information on biologics, it became obvious that we had to create a means of informing an interested wider circle of scientists and especially general clinicians. Therefore the editors of this book suggested to the researchers at the symposium and also to prominent scientists and clinicians involved in the development and application of biologics as their major field of interest the idea of assembling this compendium. We received an overwhelmingly positive response, thankfully also from the publisher, most being more than willing to support this innovative project with highly relevant chapters on the latest state of the art. As we were eager to fill the information gap with up-to-date knowledge, the project had to be finished within the shortest time possible. To all experienced with editing, this was obviously a challenge, and we are very thankful to all the contributors that our timeline had to be extended by only a few months. This book represents a collection of the most recent knowledge on biologics written by people who have been active in the field for many years. Wolf Henning Boehncke, Heinfried H. Radeke.

Patent and Trademark Office, 1999-04-06 Continuity of Neural Functions from Prenatal to Postnatal Life Heinz F. R. Prechtl, 1984 Is the human neonate indeed physiological premature as has been frequently stated? How does human neural development compare with that of other primate species? Is early human development a gradual unfolding of neural mechanisms from prenatal to postnatal life, or does it show rapid transformations at particular ages? The aim of this book is to answer these and similar questions about the functional repertoire of the human fetus, neonate, and young infant. Two main theoretical concepts are considered: first, the relationship between neural maturation and the duration of pregnancy, and second, the existence of

ontogenetic adaptations Surveys and findings relevant to these concepts are provided by experts from various disciplines involved in research on fetal and preterm development and on the first three months of postnatal life This book differs from many others summarizing descriptive knowledge of the field by emphasizing new theoretical concepts of early functional development Recent ultrasound studies of the fetus have contributed greatly to this new approach which has clear implications for the assessment and care of young infants This thought provoking book will be of interest to developmental neurologists pediatricians and obstetricians as well as to developmental psychologists and physical anthropologists
