First Electronic Computer The Atanasoff Story:

The First Electronic Computer Alice R. Burks, Arthur Walter Burks, 1988 Tells of the design construction and subsequent controversy over the first special purpose electronic computer *The First Electronic Computer* Alice R. Burks, Arthur Walter Burks, 1990 *WORLD'S FIRST GRAPHIC HISTORY OF ELECTRONICS* Avinash Suttrave, 2020-05-01 I have tried to write about history of Electronics The present book is created in different ways with photos graphics and writing text I have completed the work with delightful assistance and encouragement from many people I have tried to give my best of best to you Present book is for education purpose and also for all those readers who are interested in history of Electronics Till no any book is available on the history of Electronics in this way In this book At the starting a flow chart is given which shows how Electronics history developed *Who Invented the Computer?* Alice R. Burks, 2010-10-29 In 1973 Federal District Judge Earl R Larson issued a ruling in a patent case that was to have profound and long lasting implications for the dawning computer revolution Against all expectations the judge ruled against Sperry Rand Corp which claimed to hold the patent on the first computer dubbed the ENIAC and was demanding huge royalties on all electronic data processing sales by Honeywell Inc and other large competitors The judge came to the conclusion that in fact the ENIAC was not the first computer but was a derivative of an obscure computer called the ABC which had been developed in the late thirties by a largely unknown professor of physics and mathematics at Iowa State University named John V Atanasoff Looking back today from our digital world at what was then a little publicized trial it is clear that the judge s decision had enormous repercussions If Judge Larson had ruled the other way in favor of the patent claim subsequent manufacturers of computing hardware would have had to obtain a license from Sperry Rand and the course of computing history would likely have been very different from the galloping revolution we have all witnessed in the past three decades This book centers on this crucial trial arguing that Judge Larson correctly evaluated the facts and made the right decision even though many in the computing community have never accepted Atanasoff as the legitimate inventor of the electronic computer With meticulous research Alice Rowe Burks examines both the trial and its aftermath presenting telling evidence in convincing and absorbing fashion and leaving no doubt about the actual originator of what has been called the greatest invention of the 20th century *The Computers that Made the World* Tim Danton, 2025-07-29 This book tells the story of the birth of the computing industry via the origins of ten influential computers built between 1939 and 1950 Starting with a short sharp history of how we got to where we were on the eve of the second world war this book illuminates humanity s desire for calculation aids throughout history and how that led to the ready reckoner Napier s bones Pascal s calculator the difference engine the analytical engine the comptometer and Herman Hollerith s electronic tabulating machine This book is a world tour through the modern history of computing and it begins in 1939 with the first electronic digital computer the Atanasoff Berry computer ABC From there the book moves on to the World War II era with ENIAC the first general purpose digital computer The story of computing in World War II takes us

through Germany UK and the US and right after that the book explores the rapid growth of computing power in the post war years The years of big iron in the US and UK takes you to the middle of the 1950s In *The Computers that Made the World* you ll learn about the computers and more that shaped the world we live in and also about what happened behind the scenes

The First Computers Raul Rojas,Ulf Hashagen,2002-07-26 This history of computing focuses not on chronology what came first and who deserves credit for it but on the actual architectures of the first machines that made electronic computing a practical reality The book covers computers built in the United States Germany England and Japan It makes clear that similar concepts were often pursued simultaneously and that the early researchers explored many architectures beyond the von Neumann architecture that eventually became canonical The contributors include not only historians but also engineers and computer pioneers An introductory chapter describes the elements of computer architecture and explains why being first is even less interesting for computers than for other areas of technology The essays contain a remarkable amount of new material even on well known machines and several describe reconstructions of the historic machines These investigations are of more than simply historical interest for architectures designed to solve specific problems in the past may suggest new approaches to similar problems in today s machines Contributors Titiimaea F Ala ilima Lin Ping Ang William Aspray Friedrich L Bauer Andreas Brennecke Chris P Burton Martin Campbell Kelly Paul Ceruzzi I Bernard Cohen John Gustafson Wilhelm Hopmann Harry D Huskey Friedrich W Kistermann Thomas Lange Michael S Mahoney R B E Napper Seiichi Okoma Hartmut Petzold Ra l Rojas Anthony E Sale Robert W Seidel Ambros P Speiser Frank H Sumner James F Tau Jan Van der Spiegel Eiti Wada Michael R Williams

The History of Medical Informatics in the United States Morris F. Collen, Marion J. Ball, 2015-10-08 This is a meticulously detailed chronological record of significant events in the history of medical informatics and their impact on direct patient care and clinical research offering a representative sampling of published contributions to the field The History of Medical Informatics in the United States has been restructured within this new edition reflecting the transformation medical informatics has undergone in the years since 1990 The systems that were once exclusively institutionally driven hospital multihospital and outpatient information systems are today joined by systems that are driven by clinical subspecialties nursing pathology clinical laboratory pharmacy imaging and more At the core is the person not the clinician not the institution whose health all these systems are designed to serve A group of world renowned authors have joined forces with Dr Marion Ball to bring Dr Collen s incredible work to press These recognized leaders in medical informatics many of whom are recipients of the Morris F Collen Award in Medical Informatics and were friends of or mentored by Dr Collen carefully reviewed editing and updating his draft chapters This has resulted in the most thorough history of the subject imaginable and also provides readers with a roadmap for the subject well into later in the century

A New History of Modern Computing Thomas Haigh, Paul E. Ceruzzi, 2021-09-14 How the computer became universal Over the past fifty years the computer has been transformed from a hulking scientific supertool and data processing workhorse remote from the experiences of ordinary people to a diverse family of devices that billions rely on to play games shop stream music and movies communicate and count their steps In A New History of Modern Computing Thomas Haigh and Paul Ceruzzi trace these changes A comprehensive reimagining of Ceruzzi s A History of Modern Computing this new volume uses each chapter to recount one such transformation describing how a particular community of users and producers remade the computer into something new Haigh and Ceruzzi ground their accounts of these computing revolutions in the longer and deeper history of computing technology They begin with the story of the 1945 ENIAC computer which introduced the vocabulary of programs and programming and proceed through email pocket calculators personal computers the World Wide Web videogames smart phones and our current world of computers everywhere in phones cars appliances watches and more Finally they consider the Tesla Model S as an object that simultaneously embodies many strands of computing

Ballad to an Iowa Farmer and Other Reflections Clark Mollenhoff, 2010-09-13 [The Innovators](#) Walter Isaacson, 2014-10-07 Following his blockbuster biography of Steve Jobs Walter Isaacson s New York Times bestselling and critically acclaimed The Innovators is a riveting propulsive and at times deeply moving The Atlantic story of the people who created the computer and the internet What were the talents that allowed certain inventors and entrepreneurs to turn their visionary ideas into disruptive realities What led to their creative leaps Why did some succeed and others fail The Innovators is a masterly saga of

collaborative genius destined to be the standard history of the digital revolution and an indispensable guide to how innovation really happens Isaacson begins the adventure with Ada Lovelace Lord Byron's daughter who pioneered computer programming in the 1840s He explores the fascinating personalities that created our current digital revolution such as Vannevar Bush Alan Turing John von Neumann J C R Licklider Doug Engelbart Robert Noyce Bill Gates Steve Wozniak Steve Jobs Tim Berners Lee and Larry Page This is the story of how their minds worked and what made them so inventive It's also a narrative of how their ability to collaborate and master the art of teamwork made them even more creative For an era that seeks to foster innovation creativity and teamwork *The Innovators* is a sweeping and surprisingly tenderhearted history of the digital age *The New York Times*

Dictionary of Modern American Philosophers John R.
