First Order Programming Theories:

First-Order Programming Theories Tamas Gergely, Laszlo Ury, 2012-12-06 This work presents a purely classical first order logical approach to the field of study in theoretical computer science sometimes referred to as the theory of programs or programming theory This field essentially attempts to provide a precise mathematical basis for the common activities involved in reasoning about computer programs and programming languages and it also attempts to find practical applications in the areas of program specification verification and programming language design Many different approaches with different mathematical frameworks have been proposed as a basis for programming theory They differ in the mathematical machinery they use to define and investigate programs and program properties and they also differ in the concepts they deal with to understand the programming paradigm Different approaches use different tools and viewpoints to characterize the data environment of programs Most of the approaches are related to mathematical logic and they provide their own logic These logics however are very eclectic since they use special entities to reflect a special world of programs and also they are usually incomparable with each other This Babel's mess irritated us and we decided to peel off the eclectic components and try to answer all the questions by using classical first order logic *First-order Programming Theories* Tamás Gergely, László Úry, 1991 This book proposes a purely classical first order logical approach to the theory of programming The authors leading members of the famous Hungarian school use this approach to give a unified and systematic presentation of the theory This approach provides formal methods and tools for reasoning about computer programs and programming languages by allowing the syntactic and semantic characterization of programs the description of program properties and ways to check whether a given program satisfies certain properties The basic methods are logical extension inductive definition and their combination all of which admit an appropriate first order representation of data and time The framework proposed by the authors allows the investigation and development of different programming theories and logics from a unified point of view Dynamic and temporal logics for example are investigated and compared with respect to their expressive and proof theoretic powers The book should appeal to both theoretical researchers and students For researchers in computer science the book provides a coherent presentation of a new approach which permits the solution of various problems in programming theory in a unified manner by the use of first order logical tools The book may serve as a basis for graduate courses in programming theory and logic as it covers all important questions arising between the theory of computation and formal descriptive languages and presents an appropriate derivation system *International Symposium on Programming* B. Robinet, 1980-04 **Theory of Computing and Systems** Danny Dolev, Zvi Galil, Michael Rodeh, 1992-05-06 ISTCS 92 the Israel Symposium on the Theory of Computing and Systems came about spontaneously as a result of informal interaction between a group of people who viewed the conference as an appropriate expression of Israeli strength in theoretical aspects of computing and systems The enthusiasm that the symposium created resulted in the

submission of a large number of extremely high quality papers which led in turn to strict acceptance criteria This volume contains nineteen selected papers representing the cream of Israeli talent in the field on a variety of active and interesting topics in the theory of computing and systems

Basic Mathematical Programming Theory Giorgio Giorgi, Bienvenido Jiménez, Vicente Novo, 2023-07-18 The subject of static optimization also called mathematical programming is one of the most important and widespread branches of modern mathematics serving as a cornerstone of such scientific subjects as economic analysis operations research management sciences engineering chemistry physics statistics computer science biology and social sciences This book presents a unified progressive treatment of the basic mathematical tools of mathematical programming theory The authors expose said tools along with results concerning the most common mathematical programming problems formulated in a finite dimensional setting forming the basis for further study of the basic questions on the various algorithmic methods and the most important particular applications of mathematical programming problems This book assumes no previous experience in optimization theory and the treatment of the various topics is largely self contained Prerequisites are the basic tools of differential calculus for functions of several variables the basic notions of topology and of linear algebra and the basic mathematical notions and theoretical background used in analyzing optimization problems The book is aimed at both undergraduate and postgraduate students interested in mathematical programming problems but also those professionals who use optimization methods and wish to learn the more theoretical aspects of these questions

Algebraic and Logic Programming Helene Kirchner, Giorgio Levi, 1992-08-19 This volume contains the proceedings of the Third International Conference on Algebraic and Logic Programming held in Pisa Italy September 2 4 1992 Like the two previous conferences in Germany in 1988 and France in 1990 the third conference aims at strengthening the connections between algebraic techniques and logic programming On the one hand logic programming has been very successful during the last decades and more and more systems compete in enhancing its expressive power On the other hand concepts like functions equality theory and modularity are particularly well handled in an algebraic framework Common foundations of both approaches have recently been developed and this conference is a forum for people from both areas to exchange ideas results and experiences The book covers the following topics semantics of algebraic and logic programming integration of functional and logic programming term rewriting narrowing and resolution constraint logic programming and theorem proving concurrent features in algebraic and logic programming languages and implementation issues

The Complexity Theory Companion Lane A. Hemaspaandra, Mitsunori Ogihara, 2013-03-14 The Complexity Theory Companion is an accessible algorithmically oriented research centered up to date guide to some of the most interesting techniques of complexity theory The book s thesis is that simple algorithms are at the heart of complexity theory From the tree pruning and interval pruning algorithms that shape the first chapter to the query simulation procedures that dominate the last chapter the central proof methods of the book are algorithmic And to more clearly highlight the role of algorithmic techniques in

complexity theory the book is unlike other texts on complexity organized by technique rather than by topic Each chapter of this book focuses on one technique what it is and what results and applications it yields This textbook was developed at the University of Rochester in courses given to graduate students and advanced undergraduates Researchers also will find this book a valuable source of reference due to the comprehensive bibliography of close to five hundred entries the thirty five page subject index and the appendices giving overviews of complexity classes and reductions

Pfahring, 2005-08-29 1 Change is inevitable Embracing this quote we have tried to carefully experiment with the format of this conference the 15th International Conference on Inductive Logic Programming hopefully making it even better than it already was But it will be up to you the inquisitive reader of this book to judge our success The major changes comprised broadening the scope of the conference to include more diverse forms of non propositional learning to once again have tutorials on exciting new areas and for the first time to also have a discovery challenge as a platform for collaborative work

This year the conference was co located with ICML 2005 the 22nd International Conference on Machine Learning and also in close proximity to IJCAI 2005 the 19th International Joint Conference on Artificial Intelligence location can be tricky but we greatly benefited from the local support provided by Codrina Lauth Michael May and others We were also able to invite all ILP and ICML participants to shared events including a poster session an invited talk and a tutorial about the exciting new area of statistical relational learning Two more invited talks were exclusively given to ILP participants and were presented as a kind of stock taking fittingly so for the 15th event in a series but also tried to provide a recipe for future endeavours

Theory and Applications** Bernd Reusch, 2003-06-30

Ten years of Fuzzy Days in Dortmund What started as a relatively small workshop in 1991 has now become one of the best known smaller conferences on Computational Intelligence in the world In fact it was to my best knowledge the first conference to use this term in 1994 although I confess that another larger conference was announced first and the trade mark Computational Intelligence was not coined in Dortmund I believe that the success of this conference is grounded on the quality of its reviewed and invited papers as well as its good organization From the beginning we have sent every paper anonymously to referees and we have always accepted only around 50% of the papers sent in This year it was a little less than that I would like to thank everybody who helped us by considering Dortmund's Fuzzy Days as the conference at which to appear I know that among the abstracts not accepted there were some quite good ones but we were restricted to a fixed number

I also know that referees do a good job but cannot always judge wisely from abstracts Hence my apologies to those who did not make it this year Please try again I would like to point out that our conference also has a good regional reputation I am grateful to the City of Dortmund its Lord Mayor Dr Langemeyer the Dortmund project the DFG Deutsche Forschungsgemeinschaft the KVR Kommunalverband Ruhrgebiet the Martin Schmeier Stiftung and the C line AG Quantum GmbH for their valuable support
