First Person Marvin Minsky:

First Person Noah Wardrip-Fruin, Pat Harrigan, 2004 The relationship between story and game and related questions of electronic writing and play examined through a series of discussions among new media creators and theorists *Philosophy and Connectionist Theory* William Ramsey, David E. Rumelhart, Stephen P. Stich, 2013-06-17 The philosophy of cognitive science has recently become one of the most exciting and fastest growing domains of philosophical inquiry and analysis Until the early 1980s nearly all of the models developed treated cognitive processes like problem solving language comprehension memory and higher visual processing as rule governed symbol manipulation However this situation has changed dramatically over the last half dozen years In that period there has been an enormous shift of attention toward connectionist models of cognition that are inspired by the network like architecture of the brain Because of their unique architecture and style of processing connectionist systems are generally regarded as radically different from the more traditional symbol manipulation models This collection was designed to provide philosophers who have been working in the area of cognitive science with a forum for expressing their views on these recent developments Because the symbol manipulating paradigm has been so important to the work of contemporary philosophers many have watched the emergence of connectionism with considerable interest The contributors take very different stands toward connectionism but all agree that the potential exists for a radical shift in the way many philosophers think of various aspects of cognition Exploring this potential and other philosophical dimensions of connectionist research is the aim of this volume **Mechanical Bodies, Computational Minds** Stefano

Franchi, Güven Güzeldere, 2005 Researchers in artificial intelligence and scholars in the humanities consider the past present and future of artificial intelligence from a multidisciplinary perspective *The New Writing Environment* Mike Sharples, Thea van der Geest, 2012-12-06 Information technology is changing the way we write Special features such as outliners spelling checkers and graphic facilities have transformed word processors into document processors document processors have in turn integrated with other electronic resources such as e mail and the Internet to provide a complete writing environment The New Writing Environment examines the knowledge that is needed in order to develop use and evaluate computer based writing environments The emphasis is firmly on practical issues tasks performed by writers at work problems they encounter and documents they actually produce Writing is defined within a wide social and organisational context in order to give an accurate assessment of how the new technology affects the social and cooperative aspects of authorship The result is a wide ranging and comprehensive assessment of the relationship between writing and computers

Lanham,2006-04-21 If economics is about the allocation of resources then what is the most precious resource in our new information economy Certainly not information for we are drowning in it No what we are short of is the attention to make sense of that information With all the verve and erudition that have established his earlier books as classics Richard A Lanham here traces our epochal move from an economy of things and objects to an economy of attention According to Lanham the central commodity in our new age of information is not stuff but style for style is what competes for our attention amidst the din and deluge of new media In such a world intellectual property will become more central to the economy than real property while the arts and letters will grow to be more crucial than engineering the physical sciences and indeed economics as conventionally practiced For Lanham the arts and letters are the disciplines that study how human attention is allocated and how cultural capital is created and traded In an economy of attention style and substance change places The new attention economy therefore will anoint a new set of moguls in the business world not the CEOs or fund managers of yesteryear but new masters of attention with a grounding in the humanities and liberal arts Lanham s The Electronic Word was one of the earliest and most influential books on new electronic culture The Economics of Attention builds on the best insights of that seminal book to map the new frontier that information technologies have created **Signs of Life in the USA** Sonia Maasik,Jack Solomon,2011-11-21 Signs of Life in the USA teaches students to read and write critically about popular culture by giving them a conceptual framework to do it semiotics a field of critical theory developed specifically for the interpretation of culture and its signs Written by a prominent semiotician and an experienced writing instructor the text s high interest themes feature provocative and current reading selections that ask students to think analytically about America s impressive popular culture How is TV s Mad Men a lightning rod for America s polarized political climate Has the nature of personal identity changed in an era when we spend so much of our lives online Signs of Life bridges the transition to college writing by providing students with academic language to talk about our common everyday cultural experience Read the preface Order Multimodal Readings for Signs of Life in the USA packaged with Signs of Life in the USA Seventh Edition using ISBN 13 978 1 4576 1989 2 **You Are Not a Gadget** Jaron Lanier,2010-01-12 A NATIONAL BESTSELLER A programmer musician and father of virtual reality technology Jaron Lanier was a pioneer in

Moor,2012-12-06 In 1950 Alan Turing 1912 1954 published his famous article *Computing Machinery and Intelligence* in the journal *Mind* This article is arguably the most influential and widely read article in the philosophy of artificial intelligence Indeed most of the debate in the philosophy of artificial intelligence over the last fifty years concerns issues that were raised and discussed by Turing Turing s genius was not only in developing the theory of computability but also in understanding the impact both practical and philosophical that computing machinery would have Turing believed that computers if properly designed and educated could exhibit intelligent behavior even behavior that would be indistinguishable from human intelligent behavior His vision of the possibility of machine intelligence has been highly inspiring and extremely controversial In this classic article Turing presented his well known imitation game and predicted that about the year 2000 an average interrogator will not have more than 70 per cent chance of making the right identification after five minutes of questioning in the imitation game Based on the results of the Loebner 2000 contest and the accomplishments in the field of AI as impressive as they are Turing s prediction remains unfulfilled *Braided Selves* Pamela Cooper-White,2011-06-10 What if we are more multiple as persons
