Labor Relations in the Aviation and Aerospace Industries Robert W. Kaps, J. Scott Hamilton, Timm J. Bliss, 2012-03-08 In this textbook designed for courses on aviation labor relations the authors experts with many years of experience in these sectors examine and evaluate the labor process for all aspects of the aviation and aerospace industries including aerospace manufacturing airlines general aviation federal and state administrative agencies and public airports Divided into three parts Public Policy and Labor Law Principles Practices and Procedures in Collective Bargaining and Dispute Resolution and the Changing Labor Relations Environment the book provides an overview of the industries and the development of US labor law and policy then explores the statutory regulatory and case laws applicable to each industry segment before concluding with an examination of current and developing issues and trends The authors present the evolution of aviation and aerospace labor laws going as far back as the early nineteenth century to lay the historical foundation and cover the development and main features of the principal statutes governing labor relations in the United States today the Railway Labor Act the National Labor Relations Act and the Civil Service Reform Act They also investigate the growth of the industries and their impact on labor relations as well as the current issues and challenges facing management and labor in each segment of this dynamic sometimes volatile business and their implications for collective bargaining Twenty case studies not only illuminate practical applications of such fundamental concepts as unfair labor

practices and unions duty of fair representation but also enliven the subject preparing the reader to use the concepts in real world decision making A study guide with review questions online assignments supplemental readings and exercises is available for students For those teachers using the textbook in their courses there is an instructor s manual with additional resources for developing courses in the classroom online or by blended learning as well as a variety of assignments and materials to enhance and vary the mock negotiation exercise A revision and expansion of Robert W Kaps s *Air Transport Labor Relations* this outstanding new volume provides students and teachers with valuable information and perspectives on industries that are highly dependent on technologically skilled labor *Labor Relations in the Aviation and Aerospace Industries* offers a sweeping and thorough treatment of labor relations public policy law and practice and is the definitive work on the labor process in the aviation and aerospace sectors *Global Financial Analysis and Economic Sustainability* Professor Dr. Vijayakumaran Kathiarayan, Dr. Shakir Shaufit Affandi, 2024-05-01 The global financial system is the worldwide framework of legal agreements institutions and both formal and informal economic actors that together facilitate international flows of financial capital for purposes of investment and trade financing Since emerging in the late 19th century during the first modern wave of economic globalization its evolution is marked by the establishment of central banks multilateral treaties and intergovernmental organizations aimed at improving the transparency regulation and effectiveness of international markets In the late 1800s world migration and communication technology facilitated unprecedented growth in international trade and investment At the onset of World War I trade contracted as foreign exchange markets became paralyzed by money market illiquidity Countries sought to defend against external shocks with protectionist policies and trade virtually halted by 1933 worsening the effects of the global Great Depression until a series of reciprocal trade agreements slowly reduced tariffs worldwide Efforts to revamp the international monetary system after World War II improved exchange rate stability fostering record growth in global finance *Air Transport in the Asia Pacific* David Timothy Duval, 2016-03-16 Air transport in the Asia Pacific has undergone significant transformation in the last three decades What was once a region in the shadow of larger and more prosperous continents such as North America and Europe is now at the forefront of expansion in commercial air service networks frequency and capacity and the overall growth in the contribution of air transport to economies on regional and in many cases individual country levels Despite this it represents an area that is generally under represented in the commercial air transport academic literature *Air Transport in the Asia Pacific* seeks to fill this gap Against this context the aim of the volume is to offer a contemporary snapshot of current academic research into commercial air transport in the Asia Pacific While one volume cannot realistically address the complete range of identifiable issues this book provides timely specific and research based studies authored by leading academics and practitioners *Flying the Beam* Henry R. Lehrer, 2014 With air travel a regular part of daily life in North America we tend to take the infrastructure that makes it possible for granted However the systems regulations and technologies of civil aviation are in fact the product of decades of

experimentation and political negotiation much of it connected to the development of the airmail as the first commercially sustainable use of airplanes From the lighted airways of the 1920s through the radio navigation system in place by the time of World War II this book explores the conceptualization and ultimate construction of the initial US airways systems The daring exploits of the earliest airmail pilots are well documented but the underlying story of just how brick and mortar construction radio research and improvement chart and map preparation and other less glamorous aspects of aviation contributed to the system we have today has been understudied Flying the Beam traces the development of aeronautical navigation of the US airmail airways from 1917 to 1941 Chronologically organized the book draws on period documents pilot memoirs and firsthand investigation of surviving material remains in the landscape to trace the development of the system The author shows how visual cross country navigation only possible in good weather was developed into all weather blind flying The daytime techniques of following railroads and rivers were supplemented by a series of lighted beacons later replaced by radio towers crisscrossing the country to allow nighttime transit of long distance routes such as the one between New York and San Francisco Although today s airway system extends far beyond the continental US and is based on digital technologies the way pilots navigate from place to place basically uses the same infrastructure and procedures that were pioneered almost a century earlier While navigational electronics have changed greatly over the years actually flying the beam has changed very little
