Fish as a Resource ,1991-01-01      The Economics of Marine Resources and Conservation Policy James A.

Crutchfield,Arnold Zellner,2010-04-15 How can we manage a so called renewable natural resource such as a fishery when we don t know how renewable it really is James A Crutchfield and Arnold Zellner developed a dynamic and highly successful economic approach to this problem drawing on extensive data from the Pacific halibut industry Although the U S Department of the Interior published a report about their findings in 1962 it had very limited distribution and is now long out of print This book presents a complete reprint of Crutchfield and Zellner s pioneering study together with a new introduction by the authors and four new papers by other scholars These new studies cover the history of the Pacific halibut industry as well as the general and specific contributions of the original work such as price oriented conservation policy to the fields of resource economics and management The resulting volume integrates theory and practice in a clear well contextualized case study that will be important not just for environmental and resource economists but also for leaders of industries dependent on any natural resource      **Fishery Management Plan for Coral Reef Ecosystems of the Western Pacific Region** ,2000

Fisheries Economics, Volume I Lee G. Anderson,2019-10-28 This title was first published in 2002 This important collection of international research on fisheries economics offers a comprehensive source of contemporary research on key topics in the field as well as presenting the history of how the economic theory of fisheries exploitation has developed Bringing into focus a wide range of inquiry this volume concentrates most particularly on the traditional economic problem of optimal resource allocation Individual papers examine fundamental issues including the lack of efficiency of open access and the specification of exactly what dynamic efficiency entails Fisheries Economics is an invaluable research reference collection for the libraries of academic and other professional economists as well as an indispensable resource for those studying across the fields of natural resources fisheries economics and particularly fisheries management      *Federal Fishery Research in the Pacific Northwest Preceding Formation of Northwest Fisheries Center* M. **Fisheries Resources Economics** Xinjun Chen,2021-02-03 Fisheries resources are an important component of natural resources It is an important source of high quality animal protein and food for humans which provides employment economic benefits and social welfare for people engaged in fishing activities It also has played an important role in food safety economic development and foreign trade Fisheries resources economics is an important branch of both applied economics and resource economics Its research object is fishery resources and its economic problems The economics of fishery resources is to focus on the relationship between the demand for human economic activities and the supply of fishery resources as well as between fishery resources and its development This book expounds the reasons for the economic problems of fishery resources and the theoretical principles for solving them so as to reveal the objective rules of the allocation of fishery resources in different regions and at different times to coordinate the relationship between the

utilization of fishery resources and economic development and to realize the sustainable development of fishery economy This book will also provide learning materials for undergraduates graduate students and practitioners engaged in fishery resources development and scientific management **Fisheries Economics of the United States, 2012** National Marine Fisheries Service (U S ),2014-09-23 The 2012 report provides landings totals for both domestic recreational and commercial fisheries by species and allows us to track important indicators such as annual seafood consumption and the productivity of top fishing ports These statistics provide valuable insights but to fully understand the overall condition of our fisheries they must be looked at in combination with other biological social and economic factors of ecosystem and ocean health The Pacific Salmon Fisheries James A. Crutchfield,Giulio Pontecorvo,2013-10-18 This study attributes the chronic economic distress of the valuable Pacific salmon industry not only to decline in catch but also to the economic problems of open access ocean fisheries It analyzes salmon public management programs and proposes alternatives Originally published in 1969

**Aquatic Sciences and Fisheries Abstracts** ,1995 The Economics and Management of World Fisheries Trond Bjørndal,Gordon Munro,2012-10-25 Over the past several decades there has been increasing interest in and concern about the economics of the world s capture fishery resources Massive amounts of resource rent are being lost because of inadequate management and major rebuilding of fishery resources is called for This book draws together the latest economic theory of the management of these resources at both the national and the international levels and highlights areas where further research is urgently required The emphasis is on world capture fisheries rather than fisheries of specific regions and examples are drawn upon from both developed and developing countries It combines economic theory and empirical testing with an examination and analysis of resource policy options with particular emphasis on fisheries management policies at the international level where some of the most difficult resource management problems are found The authors maintain that capture fishery resources are properly viewed as a part of society s portfolio of natural capital assets Consequently a central theme of the book is that managing such resources should be viewed as asset management through time Written by two leading authorities this accessible textbook has been specially developed to meet the needs of students taking courses on fisheries management as well as professionals working in this area for governments and international organisations
