Biotechnology for Animal Health delves into the fascinating and expansive field of biotechnology as it applies to animal health We cover essential chapters and topics to provide a thorough understanding of this vital subject Biotechnology has significantly advanced medical science enabling groundbreaking discoveries and treatments for various diseases and conditions Our book offers comprehensive coverage of advanced topics including immune response in animals animal cells animal culture and applications of animal culture presented in simple and easy to understand language We emphasize biotechnology s role in advancing medical science and its impact on finding cures through innovative technology and state of the art equipment This book is an invaluable resource for students professionals teachers and researchers seeking to expand their knowledge in biotechnology physiology reproduction and nutrition **Livestock farming systems** R. Rubino,L. Sepe,A. Dimitriadou,A. Gibon,2023-08-28 Livestock farming increasingly means much more than just food production and product quality is no longer simply synonymous with food safety and the provision of energy and protein nutrients This book examines the variety of reasons for this shift in thinking and provides a basis for a new approach to livestock farming systems

The topical issues for product quality based on local resources are addressed from a variety of angles including genomics land use the consumer preference and human nutrition The book focuses on the following topics using examples from all over the world the current change in views and values on quality of animal products the specificity of traditional dairy and meat products and the technology of processing the role of local breeds and traditional livestock farming systems in today s society the search for local avenues for sustainable development of livestock farming systems The book serves as a reference point for scientists practitioners in the livestock industry teachers and students in animal sciences national and international institutions and policy makers It is of interest to all those who wish to gain an overview of the current challenges in the establishment of priorities and the search for operational solutions for animal production development while at the same time considering the benefit to consumers the environment and local economies

Bioactive Molecules in Food Jean-Michel Mérillon, Kishan Gopal Ramawat, 2019-01-25 This reference work provides comprehensive information about the bioactive molecules presented in our daily food and their effect on the physical and mental state of our body Although the concept of functional food is new the consumption of selected food to attain a specific effect existed already in ancient civilizations namely of China and India Consumers are now more attentive to food quality safety and health benefits and the food industry is led to develop processed and packaged food particularly in terms of calories quality nutritional value and bioactive molecules This book covers the entire range of bioactive molecules presented in daily food such as carbohydrates proteins lipids isoflavonoids carotenoids vitamin C polyphenols bioactive molecules presented in wine beer and cider Concepts like French paradox Mediterranean diet healthy diet of eating fruits and vegetables vegan and vegetarian diet functional foods are described with suitable case studies Readers will also discover a very timely compilation of methods for bioactive molecules analysis Written by highly renowned scientists of the field this reference work appeals to a wide readership from graduate students scholars researchers in the field of botany agriculture pharmacy biotechnology and food industry to those involved in manufacturing processing and marketing of value added food products

Biotechnology in Animal Health and Production Satish Kumar Jindal, M. C. Sharma, 2010 This book describes and evaluates animal biotechnology and its application in veterinary medicine and pharmaceuticals as well as improvement in animal food production Transgenic technologies are used for improving milk production and the meat in farm animals as well as for creating models of human diseases Transgenic animals are used for the production of proteins for human medical use Biotechnology is applied to facilitate xenotransplantation from animals to humans Genetic engineering is done in farm animals and nuclear transfer technology has become an important and preferred method for cloning animals Biotechnology has potential applications in the management of several animal diseases such as foot and mouth disease classical swine fever avian flue and bovine spongiform encephalopathy The most important biotechnology based products consist of vaccines particularly genetically engineered or DNA vaccines Gene therapy for diseases of pet animals is a fast developing area because many of the

technologies used in clinical trials humans were developed in animals and many of the diseases of cats and dogs are similar to those in humans RNA interference technology is now being applied for research in veterinary medicine Molecular diagnosis is assuming an important place in veterinary practice Polymerase chain reaction and its modifications are considered to be important Fluorescent in situ hybridization and enzyme linked immunosorbent assays are also widely used Newer biochip based technologies and biosensors are also finding their way in veterinary diagnostics This book is an attempt to unravel the mysteries of biotechnology as it affects animal health and production

Handbook of Food Fortification and Health Victor R. Preedy, Rajaventhana Srirajaskanthan, Vinood B. Patel, 2013-07-04 Handbook of Food Fortification and Health From Concepts to Public Health Applications Volume 2 represents a multidisciplinary approach to food fortification This book aims to disseminate important material pertaining to the fortification of foods from strategic initiatives to public health applications Optimal nutritional intake is an essential component of health and wellbeing Unfortunately situations arise on a local or national scale when nutrient supply or intake is deemed to be suboptimal As a consequence ill health occurs affecting individual organs or causing premature death In terms of public health malnutrition due to micronutrient deficiency can be quite profound imposing economic and social burdens on individuals and whole communities This comprehensive text examines the broad spectrum of food fortification in all its manifestations Coverage includes sections on definitions of fortifications fortified foods beverages and nutrients fortifications with micronutrients biofortification impact on individuals public health concepts and issues and selective methods and food chemistry Handbook of Food Fortification and Health From Concepts to Public Health Applications Volume 2 is an indispensable text designed for nutritionists dietitians clinicians and health related professionals
