Fatal Episodes:

Suicide as a Dramatic Performance David Lester, 2017-07-05 Each suicide is as unique as the individuals involved especially if one examines the nature of the act and to what extent these acts can be viewed as a theatrical performance Focusing on the dramatic aspects of suicide may seem tangential to the physical and mental pain experienced by those who try to kill themselves but dramatic aspects often provide important clues for understanding the mental state of suicidal individuals David Lester and Steven Stack investigate what happens in the weeks days and hours before a suicide when the suicidal individual must make decisions and formulate the script for his or her suicidal act The editors argue that these choices may help us understand and prevent other suicides and stimulate new and innovative research in this important area Through twenty five substantive chapters including both quantitative and qualitative analyses this book offers insights into suicide as a dramatic act with chapters on the intended audience the suicide note the location and method chosen and cultural scripts including suicide by cop sati seppuku and duels The contributors to this volume argue that psychological social and cultural factors influence these choices and that the decisions made by the individual are important for understanding the mental state of the person choosing to die by suicide The Hereditary Basis of Allergic Diseases

Stephen T. Holgate, John W. Holloway, 2012-12-06 Allergic diseases are complex and involve a range of environmental factors interacting with a susceptible genotype The familial clustering of diseases such as asthma and hay fever has been recognised for over two centuries but identification of the genetic basis to this had to await the molecular biological revolution Estimates of the contribution that genetic factors make to asthma susceptibility range from 35% to 70% For the majority of allergic diseases segregation analysis has not identified a consistent Mendelian pattern of inheritance which when combined with multiple phenotypes and environmental interactions has made identifying candidate genes especially difficult and at times controversial Part of the difficulty has been lack of agreement over phenotype definitions reduced power of studies to predict linkage and association and importantly lack of true heterogeneity between populations Despite these difficulties the last decade has witnessed enormous progress in this field Crime in Scotland 1660-1960 Anne-Marie Kilday, 2018-09-20

Scotland has often been regarded throughout history as the violent north but how true is this statement Does Scotland deserve to be defined thus and upon what foundations is this definition based This book examines the history of crime in Scotland questioning the labelling of Scotland as home to a violent culture and examining changes in violent behaviour over time the role of religion on violence how gender impacted on violence and how the level of Scottish violence fares when compared to incidents of violence throughout the rest of the UK This book offers a ground breaking contribution to the historiography of Scottish crime Not only does the piece illuminate for the first time the nature and incidence of Scottish criminality over the course of some three hundred years but it also employs a more integrated analysis of gender than has hitherto been evident This book sheds light on whether the stereotypical label given to Scotland as the violent north is

appropriate or in any way accurate and it further contributes to our understanding of not only Scottish society but of the history of crime and punishment in the British Isles and beyond *Jean Baudrillard: Selected Writings* Jean Baudrillard, 2001 An expanded edition of the first comprehensive overview of Baudrillard's work this new edition adds examples from after 1985 *Ferri's Clinical Advisor 2020 E-Book* Fred F.
