Featured Reviews in "Mathematical Reviews" 1995-1996 Donald G. Babbitt, Jane E. Kister, This collection of reprinted Featured Reviews published in Mathematical Reviews MR in 1995 and 1996 makes widely available informed reviews of some of the best mathematics published recently. Featured Reviews were introduced in MR at the beginning of 1995 in part to provide some guidance to the current research level literature. With the exponential growth of publications in mathematical research in the first half century of MR it had become essentially impossible for users of MR to identify the most important new research level books and papers especially in fields outside of the users own expertise. This work identifies some of the best new publications papers and books that are expected to have a significant impact on the area of pure or applied mathematics with which researchers are concerned. All of the papers reviewed here contain interesting new ideas or applications, a deep synthesis of existing ideas or any combination of these. The volume is intended to lead the user to important new research across all fields covered by MR.

Donald G. Babbitt, Jane E. Kister, 2000-05-05 This second volume of Featured Reviews makes available special detailed reviews of some of the most important mathematical articles and books published from 1997 through 1999. Also included are excellent reviews of several classic books and articles published prior to 1970. Among those reviews for example are the following: Homological Algebra by Henri Cartan and Samuel Eilenberg reviewed by G Hochschild; Faisceaux algebriques coherents by Jean Pierre Serre reviewed by C Chevalley; and On the Theory of General Partial Differential Operators by Lars Hormander reviewed by J L Lions. In particular those seeking information on current developments outside their own area of expertise will find the volume very useful. By identifying some of the best publications papers and books that have had or are expected to have a significant impact in applied and pure mathematics this volume will serve as a comprehensive guide to important new research across all fields covered by MR.

Guide to Information Sources in Mathematics and

Statistics Martha A. Tucker, Nancy D. Anderson, 2004-09-30 This book is a reference for librarians, mathematicians and statisticians involved in college and research level mathematics and statistics in the 21st century. We are in a time of transition in scholarly communications in mathematics practices which have changed little for a hundred years are giving way to new modes of accessing information. Where journals, books, indexes and catalogs were once the physical representation of a good mathematics library, shelves have given way to computers and users are often accessing information from remote places. Part I is a historical survey of the past 15 years tracking this huge transition in scholarly communications in mathematics. Part II of the book is the bibliography of resources recommended to support the disciplines of mathematics and statistics. These are grouped by type of material. Publication dates range from the 1800s onwards. Hundreds of electronic resources, some online, both dynamic and static, some in fixed media, are listed among the paper resources. Amazingly, a majority of listed electronic resources are free.

Gian-Carlo Rota on Analysis and Probability Jean Dhombres, 2002-12-06 Gian Carlo Rota was born in Vigevano Italy in 1932 He died in Cambridge Massachusetts in 1999 He had several careers most notably as a mathematician but also as a philosopher and a consultant to the United States government His mathematical career was equally varied His early mathematical studies were at Princeton 1950 to 1953 and Yale 1953 to 1956 In 1956 he completed his doctoral thesis under the direction of Jacob T Schwartz This thesis was published as the paper Extension theory of differential operators I the first paper reprinted in this volume Rota's early work was in analysis more specifically in operator theory differential equations ergodic theory and probability theory In the 1960 s Rota was motivated by problems in fluctuation theory to study some operator identities of Glen Baxter see 7 Together with other problems in probability theory this led Rota to study combinatorics His series of papers On the foundations of combinatorial theory led to a fundamental re evaluation of the subject Later in the 1990 s Rota returned to some of the problems in analysis and probability theory which motivated his work in combinatorics This was his intention all along and his early death robbed mathematics of his unique perspective on linkages between the discrete and the continuous Glimpses of his new research programs can be found in 2 3 6 9 10
