unified Arctic science under the First International Polar Year in 1882 The IPY brought together researchers from multiple countries with the aim of undertaking systematic and coordinated experiments and observations in the Arctic and Antarctic Harsh conditions intense isolation and acute danger inevitably impacted the making and communicating of scientific knowledge At the same time changes in ideas about what it meant to be an authoritative observer of natural phenomena were linked to tensions in imperial ambitions national identities and international collaborations of the IPY Through a focused study of travel narratives in the British Danish Canadian and American contexts Nanna Katrine Lders Kaalund uncovers not only the transnational nature of Arctic exploration but also how the publication and reception of literature about it shaped an extreme environment its explorers and their scientific practices She reveals how far beyond the metropole in the vast area we understand today as the North American and Greenlandic Arctic explorations and the narratives that followed ultimately influenced the production of field science in the nineteenth century
