**Sensors Fault Diagnosis Trends and Applications** Piotr Witczak, 2021-09-01 Fault diagnosis has always been a concern for industry In general diagnosis in complex systems requires the acquisition of information from sensors and the processing and extracting of required features for the classification or identification of faults Therefore fault diagnosis of sensors is clearly important as faulty information from a sensor may lead to misleading conclusions about the whole system As engineering systems grow in size and complexity it becomes more and more important to diagnose faulty behavior before it can lead to total failure In the light of above issues this book is dedicated to trends and applications in modern sensor fault diagnosis *System Fault Diagnostics, Reliability and Related Knowledge-Based Approaches* S.G. Tzafestas, Madan Singh, Günther Schmidt, 2012-12-06

**Timing Behavior Analysis for Fault Localization in Software Systems** Matthias Rohr, 2015-02-09 Software timing

behavior measurements such as response times often show high statistical variance This variance can make the analysis difficult or even threaten the applicability of statistical techniques This thesis introduces a method for improving the analysis of software response time measurements that show high variance Our approach can find relations between timing behavior variance and both trace shape information and workload intensity information This relation is used to provide timing behavior measurements with virtually less variance This can make timing behavior analysis more robust e g improved confidence and precision and faster e g less simulation runs and shorter monitoring period The thesis contributes TracSTA Trace Context Sensitive Timing Behavior Analysis and WiSTA Workload Intensity Sensitive Timing Behavior Analysis TracSTA uses trace shape information i e the shape of the control flow corresponding to a software operation execution and WiSTA uses workload intensity metrics e g the number of concurrent software executions to create context specific timing behavior profiles Both the applicability and effectiveness are evaluated in several case studies and field studies The evaluation shows a strong relation between timing behavior and the metrics considered by TracSTA and WiSTA Additionally a fault localization approach for enterprise software systems is presented as application scenario It uses the timing behavior data provided by TracSTA and WiSTA for anomaly detection
