Feature Logics, Infinitary Descriptions, and Grammar Bill Keller, 2000 **The Oxford Reference Guide to Lexical Functional Grammar** Mary Dalrymple, John J. Lowe, Louise Mycock, 2019 The authors provide detailed and extensive coverage of the analysis of syntax semantics morphology prosody and information structure and how these aspects of linguistic structure interact in the nontransformational framework of LFG The volume will be a reference for graduate and advanced undergraduate students and researchers in a wide range of linguistic sub fields including syntax morphology semantics information structure and prosody as well as those working in language documentation and description Verlag

Logical Aspects of Computational Linguistics Christian Retore, 1997-10-15 This book constitutes the strictly refereed post conference proceedings of the First International Conference on Logical Aspects of Computational Linguistics LACL 96 held in Nancy France in April 1996 The volume presents 18 revised full papers carefully selected and reviewed for inclusion in the book together with four invited contributions by leading authorities and an introductory survey with a detailed bibliography The papers cover all relevant logical aspects of computational linguistics like logical inference grammars logical semantics natural language processing formal proofs logic programming type theory etc *Handbook of Logic and*

Language Johan F.A.K. van Benthem, Alice ter Meulen, 2010-12-17 The logical study of language is becoming more interdisciplinary playing a role in fields such as computer science artificial intelligence cognitive science and game theory This new edition written by the leading experts in the field presents an overview of the latest developments at the interface of logic and linguistics as well as a historical perspective It is divided into three parts covering Frameworks General Topics and Descriptive Themes Completely revised and updated includes over 25% new material Discusses the interface between logic and language Many of the authors are creators or active developers of the theories **Formal Issues in**

Lexical-Functional Grammar Mary Dalrymple, 1995-11-24 Lexical Functional Grammar was first developed by Joan Bresnan and Ronald M Kaplan in the late 1970s and was designed to serve as a medium for expressing and explaining important generalisations about the syntax of human languages and thus to serve as a vehicle for independent linguistic research An equally important goal was to provide a restricted mathematically tractable notation that could be interpreted by psychologically plausible and computationally efficient processing mechanisms The formal architecture of LFG provides a simple set of devices for describing the common properties of all human languages and the particular properties of individual languages This volume presents work conducted over the past several years at the Xerox Palo Alto Research Center Stanford University and elsewhere The different sections link mathematical and computational issues and the analysis of particular linguistic phenomena in areas such as wh constructions anaphoric binding word order and coordination *Constraints in Computational Logics. Theory and Applications* Hubert Comon, ESPRIT CCL Working Group, 2001-04-18 Constraints and constraint solving an introduction Jean Pierre Jouannaud Constraint solving on terms Hubert Comon Combining constraint

Constraints in Computational Logics: Theory and Applications Hubert Comon, Claude Marche, Ralf Treinen, 2003-08-06 Constraints provide a declarative way of representing infinite sets of data They are well suited for combining different logical or programming paradigms as has been known for constraint logic programming since the 1980s and more recently for functional programming The use of constraints in automated deduction is more recent and has proved to be very successful moving the control from the meta level to the constraints which are now first class objects This monograph like book presents six thoroughly reviewed and revised lectures given by leading researchers at the summer school organized by the ESPRIT CCL Working Group in Gif sur Yvette France in September 1999 The book offers coherently written chapters on constraints and constraint solving constraint solving on terms combining constraint solving constraints and theorem proving functional and constraint logic programming and building industrial applications

The Theory and Practice of Discourse Parsing and Summarization Daniel Marcu, 2000 Most discourse researchers assume that full semantic understanding is necessary to derive the discourse structure of texts This book documents an attempt to construct and use automatic and non semantic computational structures for text summarization

Rewriting Techniques and Applications Claude Kirchner, 2015-03-19 This volume contains the proceedings of RTA 93 the fifth International Conference on Rewriting Techniques and Applications held in Montreal Canada in June 1993 The volume includes three invited lectures Rewrite techniques in theorem proving L Bachmair Proving properties of typed lambda terms realizability covers and sheaves J Gallier and On some algorithmic problems for groups and monoids S J Adian together with 29 selected papers 6 system descriptions and a list of open problems in the field The papers cover many topics term rewriting termination graph rewriting constraint solving semantic unification disunification and combination higher order logics and theorem proving with several papers on distributed theorem proving theorem proving with constraints and completion

Situation Theory and Its Applications: Volume 3 Robin Cooper, Peter Aczel, Kuniaki Mukai, John Perry, 1990 Situation theory is the result of an interdisciplinary effort to create a full fledged theory of information Created by scholars and scientists from cognitive science computer science and AI linguistics logic philosophy and mathematics it aims to provide a common set of tools for the analysis of phenomena from all these fields Unlike Shannon Weaver type theories of information which are purely quantitative theories situation theory aims at providing tools for the analysis of the specific content of a situation signal message data base statement or other information carrying situation The question addressed is not how much information is carried but what information is carried

Generative Grammar's Grave Foundational Errors Paul M. Postal, 2025-08-04 This work examines Noam Chomsky's widely accepted ontological assumptions now referred to as biolinguistics and demonstrates that they are internally inconsistent Notably it is shown that Chomsky himself has at least once admitted this flaw

Additionally the volume challenges a fundamental assumption from Chomsky's 1950s linguistic writings. This is the claim that the grammars of natural languages, particularly of English, must be constructive proof-theoretic devices usually called generative grammars. It is shown that this persistent view cannot in principle account for a multitude of linguistic structures realized as perfectly natural sentences. Finally the work scrutinizes Chomsky's frequent assertion that there is essentially only one language spoken on Earth, revealing it to have no actual substance. The exposition of these flaws calls for a reassessment of fundamental aspects of generative linguistics. Events, Arguments, and Aspects Klaus

Robering, 2014-03-15 The verb has often been considered the center of the sentence and has hence always attracted the special attention of the linguist. The present volume collects novel approaches to two classical topics within verbal semantics, namely argument structure and the treatment of time and aspect. The linguistic material covered comes from a broad spectrum of languages including English, German, Danish, Ukrainian, and Australian aboriginal languages, and methods from both cognitive and formal semantics are applied in the analyses presented here. Some of the authors use a variety of event semantics in order to analyze argument structure and aspect, whereas others employ ideas coming from object-oriented programming in order to achieve new insights into the way how verbs select their arguments and how events are classified into different types. Both kinds of methods are also used to give accounts of dynamical aspects of semantic interpretation, such as coercion and type shifting. Lexical Functional Grammar Mary Dalrymple, 2001-08-08 Volume 34 of Syntax and Semantics is a thorough and accessible overview and introduction to Lexical Functional Grammar (LFG), a theory of the content and representation of different aspects of linguistic structure and the relations that hold between them. The book motivates and describes the two syntactic structures of LFG: surface phrasal organization is represented by a context-free phrase structure tree, and more abstract functional syntactic relations like subject and object are represented separately at functional structure. The book also presents a theory of semantics and the syntax-semantics interface in which the meaning of an utterance is obtained via deduction from semantic premises contributed by its parts. Clear explication of the formal aspects of the theory is provided throughout, and differences between LFG and other linguistic theories are explored. The theory is illustrated by the analysis of a varied set of linguistic phenomena, including modification, control, anaphora, coordination, and long distance dependencies. Besides its interest to linguists, LFG also has practical applications in computational linguistics and computer science. This book offers a thorough overview of the state of the art in Lexical Functional Grammar. It presents a clear explanation of the formal tools of the theory. It also offers an introduction to the glue semantics, a theory of the syntax-semantics interface. It also presents in depth syntactic and semantic analysis of a variety of linguistic constructions. **The First Glot International State-of-the-Article Book** Lisa Cheng, Rint Sybesma, 2014-10-09 The Glot International State-of-the-Article books constitute the ideal solution for everyone who wants to have a good idea of what the others are doing but does not have time to follow the developments in all other parts of the field on a day-to-day

The Proceedings of the 27th Annual Child Language Research Forum Eve V. Clark, 1995 Since its inception in 1967 the Forum has provided an informal but critical setting for the presentation of new ideas and research on first language acquisition The Forum itself is sponsored by the Linguistics Department at Stanford and is organised by graduate students In this volume the contributors explore their findings in language acquisition in a variety of the world's languages The papers presented here reflect the diversity of interests in the field and the range of languages being studied This volume makes an empirical as well as a theoretical contribution to linguistic research
