The Federal Bulldozer Martin Anderson, 1964-09-15      *The Federal Bulldozer* Martin Anderson, 1967      The Federal Bulldozer. A Critical Analysis of Urban Renewal, 1949-1962 Martin ANDERSON (Assistant Professor of Finance at the Columbia University Graduate School of Business.), 1965      Private Property and Public Power Debbie Becher, 2014-08-12

News media reports on eminent domain often highlight outrage and heated protest But these accounts Debbie Becher finds obscure a much more complex reality of how Americans understand property Private Property and Public Power presents the first comprehensive study of a city's acquisitions exploring how and why Philadelphia took properties between 1992 and 2007 for private redevelopment Becher uses original data collected from city offices and interviews with over a hundred residents business owners community leaders government representatives attorneys and appraisers to explore how eminent domain really works Surprisingly the city took over 4 000 private properties and these takings rarely provoked opposition When conflicts did arise community residents businesses and politicians all appealed to a shared notion of investment to justify their arguments about policy It is this social conception of property as an investment of value committed over time that government is responsible for protecting Becher's findings stand in stark contrast to the views of libertarian and left leaning activists and academics but recognizing property as investment she argues may offer a solid foundation for more progressive urban policies

The Great Reset Richard Florida, 2010-04-27 We tend to view prolonged economic downturns such as the Great Depression of the 1930s and the Long Depression of the late nineteenth century in terms of the crisis and pain they cause But history teaches us that these great crises also represent opportunities to remake our economy and society and to generate whole new eras of economic growth and prosperity In terms of innovation invention and energetic risk taking these periods of creative destruction have been some of the most fertile in history and the changes they put into motion can set the stage for full scale recovery In *The Great Reset* bestselling author and economic development expert Richard Florida provides an engaging and sweeping examination of these previous economic epochs or resets He distills the deep forces that have altered physical and social landscapes and eventually reshaped economies and societies Looking toward the future Florida identifies the patterns that will drive the next Great Reset and transform virtually every aspect of our lives from how and where we live to how we work to how we invest in individuals and infrastructure to how we shape our cities and regions Florida shows how these forces when combined will spur a fresh era of growth and prosperity define a new geography of progress and create surprising opportunities for all of us Among these forces will be new patterns of consumption and new attitudes toward ownership that are less centered on houses and cars the transformation of millions of service jobs into

middle class careers that engage workers as a source of innovation new forms of infrastructure that speed the movement of people goods and ideas a radically altered and much denser economic landscape organized around megaregions that will drive the development of new industries new jobs and a whole new way of life We've weathered tough times before They are a necessary part of economic cycles giving us a chance to clearly see what's working and what's not Societies can be reborn in such crises emerging fresh strong and refocused Now is our opportunity to anticipate what that brighter future will look like and to take the steps that will get us there faster With his trademark blend of wit irreverence and rigorous research and analysis Florida presents an optimistic and counterintuitive vision of our future calling into question long held beliefs about the nature of economic progress and forcing us to reassess our very way of life He argues convincingly that it's time to turn our efforts as individuals as governments and as a society to putting the necessary pieces in place for a vibrant prosperous future

Urban Renewal National Housing Center (U.S.). Library, 1965      **Changing Places** John MacDonald, Charles Branas, Robert Stokes, 2022-06-07 How the science of urban planning can make our cities healthier safer and more livable The design of every aspect of the urban landscape from streets and sidewalks to green spaces mass transit and housing fundamentally influences the health and safety of the communities who live there It can affect people's stress levels and determine whether they walk or drive the quality of the air they breathe and how free they are from crime Changing Places provides a compelling look at the new science and art of urban planning showing how scientists planners and citizens can work together to reshape city life in measurably positive ways Drawing on the latest research in city planning economics criminology public health and other fields Changing Places demonstrates how well designed changes to place can significantly improve the well-being of large groups of people The book argues that there is a disconnect between those who implement place-based changes such as planners and developers and the urban scientists who are now able to rigorously evaluate these changes through testing and experimentation This compelling book covers a broad range of structural interventions such as building and housing land and

open space transportation and street environments and entertainment and recreation centers Science shows we can enhance people's health and safety by changing neighborhoods block by block Changing Places explains why planners and developers need to recognize the value of scientific testing and why scientists need to embrace the indispensable know-how of planners and developers This book reveals how these professionals working together and with urban residents can create place-based interventions that are simple affordable and scalable to entire cities Reality and Research George C. Galster,1996

Confidence was at its highest in the 1960s that governments could solve many of the country's urban problems by commissioning social science studies and being guided by their findings Here 11 studies critically evaluate the three decades of such policy analysis in a wide range of urban policy arenas including community development transportation and land use education housing family support and social welfare drugs and racial discrimination They find mixed results in different areas sometimes the system worked wonderfully sometimes the studies were excellent but ignored and sometimes the studies were conducted merely to support policy adopted for other reasons No index Annotation copyright by Book News Inc Portland OR
