Enterprise Architecture Turnaround Nagesh V. Anupindi Ph. D., Gerard A. Coady, 2011-12 To provide structure and transparency to the complex world of IT Enterprise Architecture was created However we created complexities within Enterprise Architecture with Frameworks that are not easily understandable and

purposefully implementable In this book Nagesh and Gerry help to turnaround Enterprise Architecture organizations They introduce a simple IDEA Framework that is based on common practices and investments within IT organizations The Ten deliverables presented in this book bring structure and clarity to IT organizations that are 10 people IT shops and 1000 IT staff enterprises alike This book is not an ivory tower work it is actionable applied Enterprise Architecture It is also a healthy dose of EA tough love If you want to know why EA fails read the second chapter It is introspective it does not blame external forces the not my fault syndrome It also does not blame in fact it hardly mentions technology To be fair the Nagesh and Gerry do recognize external influences however they are viewed as risks that must be managed Most corporations focus on this year s budget investments and rewards The same focus rolls downhill to the Information Technology department If the IT department has not successfully communicated the budget and managed to spend it within the limits 10% variance everything else may seem irrelevant Eventually Nagesh and Gerry started looking through current IT systems and IT assets to understand a where the current funds were being invested b how these investments jelled or were mandated because of the previous investments that had been made by IT and c how the company s business priorities aligned with future technology needs including the need to meet compliance requirements Considering and discovering the answers to these three questions led Nagesh and Gerry to develop a definition of Enterprise Architecture that was based on technology investments Investment Driven Enterprise Architecture IDEA Framework The purpose of the IDEA Framework is to provide guidance on how the corporation s future technology will be drafted and communicated Its method is to utilize actual systems hardware people and business functions in order to establish boundaries within which the IDEA Framework will work The structure of the IDEA Framework differs from that of many others because it consists of key deliverables that fit into day to day activities and it accommodates an enterprise wide strategic plan It also provides for the much needed interaction between these key deliverables and facilitates contributions from key stakeholders across Business Units and the various IT departments In essence the IDEA Framework takes the key deliverables stakeholders and organizations and demonstrates how they dynamically function together

An Introduction to Enterprise Architecture

Scott A. Bernard, 2012-08-13 An Introduction to Enterprise Architecture is the culmination of several decades of experience that I have gained through work initially as an information technology manager and then as a consultant to executives in the public and private sectors I wrote this book for three major reasons 1 to help move business and technology planning from a systems and process level view to a more strategy driven enterprise level view 2 to promote and explain the emerging profession of EA and 3 to provide the first textbook on the subject of EA which is suitable for graduate and undergraduate levels of study To date other books on EA have been practitioner books not specifically oriented toward a student who may be learning the subject with little to no previous exposure Therefore this book contains references to

related academic research and industry best practices as well as my own observations about potential future practices and the direction of this emerging profession
