Ecology Diversity And Sustainability Of The Middle Rio Grande Basin:

Ecology, Diversity, and Sustainability of the Middle Rio Grande Basin Deborah M. Finch, 1995 This book synthesizes existing information on the ecology diversity human uses and research needs of the Middle Rio Grande Basin of New Mexico Divided into nine chapters the volume begins with reviews of the environmental history and human cultures in the Basin followed by an analysis of the influences and problems of climate and water Later chapters focus on ecological processes environmental changes management problems and current conditions in Basin ecosystems identified as being especially susceptible to damage pinyon juniper woodlands grasslands and shrublands and the riparian bosque of the Rio Grande Research needs associated with land management problems are identified for each of these ecosystem types Many interrelated factors identified here have contributed to deteriorating environmental conditions in the Basin Concluding chapters on the belowground ecology of specific Basin ecosystems and on declining populations of native fish species highlight topics in need of further attention Each chapter seeks to identify studies that can supply information to mitigate environmental problems rehabilitate ecosystems and sustain them in light of human values and needs Ecology, Diversity, and Sustainability of the Middle Rio Grande Basin Deborah M. Finch, 1995 Synthesizes existing information on the ecology diversity human uses research needs of the Middle Rio Grande Basin of New Mexico Begins with a review of the environmental history human cultures of the basin followed by an analysis of the influences problems of climate water Also focuses on ecological processes environmental changes management problems Each chapter identifies studies that can supply information to mitigate environmental problems rehabilitate ecosystems sustain them in light of human values needs *General Technical Report RM. ,1997* Upper Rio Grande Basin Water Operations Review ,2007 *Proceedings RMRS. ,1998* **Wilderness Science in a Time of Change Conference: Wilderness ecosystems, threats, and management ,2000** *Wilderness Science in a Time of Change Conference ,2000* General Technical Report RMRS ,1998 **Responses of Plant Communities to Grazing in the Southwestern United States : Daniel G. Dahms,1997 This report documents an ecological assessment of forest ecosystem health in the Southwest The assessment focuses at the regional level and mostly pertains to lands administered by the National Forest System Information is presented for use by forest and district resource managers as well as collaborative partners in the stewardship of Southwestern forests The report establishes a scientific basis for conducting forest health projects provides a context for planning ecosystem restoration and contributes to the understanding of the physical biological and human dimensions of these ecosystems Chapters describe Southwestern forest ecosystems of the past changes since the Colonial Period and the implications of those changes for the health of current and future forests Opportunities tools and research needs for

improving ecosystem sustainability are also identified **Hydrologic Processes in the Pinyon-juniper Woodlands** Peter F. Ffolliott, 2012 Hydrologic processes in the pinyon juniper woodlands of the western region of the United States are variable because of the inherent interactions among the occurring precipitation regimes geomorphological settings and edaphic conditions that characterize the ecosystem A wide range of past and present land use practices further complicates comprehensive evaluations of these hydrologic processes Heterogeneous vegetative covers make it even more difficult to generalize hydrologic processes and the effects of land management practices on the water balance Nevertheless estimates of interception infiltration evapotranspiration soil moisture storage and hillslope soil erosion of these on site hydrologic processes have been obtained in plot studies Estimates of off site streamflow volumes sediment yields and transport and quality of streamflow water are available from the results of watershed level investigations Estimates of these respective hydrologic processes are presented in this general technical report **Proposed Statewide Resource Management Plan Amendment/final Environmental Impact Statement** United States. Bureau of Land Management. New Mexico State Office, 2000 Documents the effects of adopting standards for public land health and guidelines for livestock grazing management on Bureau of Land Management BLM administered land in New Mexico The standards and guidelines would be incorporated into eight BLM resources management plans RMP that cover approximately 13 5 million acres In addition for each alternative there are existing land use decisions that are in conformance with the standards These decisions would be changed to bring them into conformance Page xiii **Agricultural Conservation Practices and Related Issues** , 2004

Water Ethics David Groenfeldt, 2013-10-01 This book introduces the idea that ethics are an intrinsic dimension of any water policy program or practice and that understanding what ethics are being acted out in water policies is fundamental to an understanding of water resource management Thus in controversies or conflicts over water resource allocation and use an examination of ethics can help clarify the positions of conflicting parties as preparation for constructive negotiations The author shows the benefits of exposing tacit values and motivations and subjecting these to explicit public scrutiny where the values themselves can be debated The aim of such a process is to create the proverbial level playing field where values favoring environmental sustainability are considered in relation to values favoring short term exploitation for quick economic stimulus the current problem or quick protection from water disasters through infrastructure which science suggests is not sustainable The book shows how new technologies such as drip irrigation or governance structures such as river basin organizations are neither good nor bad in their own right but can serve a range of interests which are guided by ethics A new ethic of coexistence and synergies with nature is possible but ultimately depends not on science law or finances but on the values we choose to adopt The book includes a wide range of case studies from countries including Australia India Philippines South Africa and USA These cover various contexts including water for agriculture urban domestic and industrial use the rights of indigenous people and river watershed and ecosystem management *City of Albuquerque Drinking Water*
