Ecology For Gardeners:

Ecology for Gardeners Steven B. Carroll, Steven D. Salt, 2004-05-15 Even a relatively small garden is a miniature ecosystem. It includes a surprising diversity of organisms that interact in a myriad of ways. Some are permanent residents; others come and go in search of a meal or a mate. An insect feeding on a garden plant is simultaneously hunted by predators and weakened by parasites; it competes with other herbivores for choice food plants; it is hindered in its feeding by the plant's chemical and physical defenses; and it challenges other members of its species for the best mates and locations for egg laying. Ecologists Carroll and Salt argue that the more completely we understand these interactions, the better gardeners we become. The authors cite hundreds of examples drawn from personal experience and from literature on gardening and ecology.

The Ecological Gardener Matt Rees-Warren, 2021-04-29 Design a garden for the future because what we grow matters. Plant Ecology in the Middle East Ahmad Hegazy, Jonathan Lovett-Doust, 2016-01-14 This advanced textbook explores the intriguing flora and plant ecology of the Middle East framed by a changing desert landscape, global climate change and the arc of human history. This vast region has been largely under recognized, under studied and certainly under published due in part to the challenges posed to research by political disputes and human conflict and a treatise on the subject is now timely. The book integrates Middle Eastern plant geography and its major drivers: geotectonics, seed and fruit dispersal, plant functional types etc with the principles of plant ecology. The authors include the many specialized adaptations to desert and dryland ecosystems including succulence, water conserving photosynthesis and a remarkable range of other life history strategies. They explore the formation of climate relicts and describe the long history of domestication in the region together with the many reciprocal effects of agriculture on plant ecology. The book concludes by discussing conservation in the region highlighting five regional biodiversity hotspots where the challenges of desertification, habitat loss and other threats to plant biodiversity are particularly acute. *Plant Ecology in the Middle East* is a timely synthesis of the field setting a new baseline for future research. It will be important reading for both undergraduate and graduate students taking courses in plant ecology, evolution, systematics, biodiversity and conservation and will also be of interest and use to a professional audience of botanists, conservation biologists and practitioners working in dryland ecosystems.

Urban Agroecology Monika Egerer, Hamutahl Cohen, 2020-12-16 Today 20 percent of the global food supply relies on urban agriculture, social ecological systems shaped by both human and non human interactions. This book shows how urban agroecologists measure flora and fauna that underpin the ecological dynamics of these systems and how people manage and benefit from these systems. It explains how the sociopolitical landscape in which these systems are embedded can in turn shape the social, ecological, political and economic dynamics within them. Synthesizing interdisciplinary approaches in urban agroecology in the natural and social sciences, the book explores methodologies and new directions in research that can be adopted by scholars and practitioners alike. With contributions from researchers utilizing both social and natural science approaches, *Urban Agroecology* describes the current social environmental understandings of the science, the movement and the practices in urban agroecology. By investigating the role of agroecology in cities, the book calls for the

creation of spaces for food to be sustainably grown in urban spaces an Urban Agriculture UA movement Essential reading for graduate students practitioners policy makers and researchers this book charts the course for accelerating this movement
