Economic And Demographic Change In Africa:

Economic and Demographic Change in Africa Archie Mafeje, Samir Muhammad Raḍwān, 1995 The interaction between demography and the economy has been at the centre of the debate on the performance of African economics in recent years Africa has in the past decade or so shown some of the highest population growth rates in the world at a time when the economic crisis has become deeper and deeper One school of thought blames the present economic crisis on rapid population growth another regards this growth as a stimulus to economic development What emerges from this volume is that the quality of African labour is certainly a barrier to rapid economic growth The rate of increase in the skill endowment of African labour is accordingly seen as both a constraint and a potential source for accelerated development in the future **Africa's**

Population: In Search of a Demographic Dividend Hans Groth, John F. May, 2017-05-23 This book examines the promises as well as the challenges the demographic dividend brings to sub-Saharan Africa as fertility rates in the region fall and the labor force grows It offers a detailed analysis of what conditions must be met in order for the region to take full economic advantage of ongoing population dynamics As the book makes clear the region will need to accelerate reforms to cope with its demographic transition in particular the decline of fertility The continent will need to foster human capital formation through renewed efforts in the areas of education health and employment This will entail a true vision and determination on the part of African leaders and their development partners The book will help readers to gain solid knowledge of the demographic trends and provide insights into socioeconomic policies that eventually might lead sub-Saharan Africa into a successful future **Demographic Change in Sub-Saharan Africa** National Research Council, Division of Behavioral and Social Sciences and Education, Commission on Behavioral and Social Sciences and Education, Panel on the Population Dynamics of Sub-Saharan Africa, 1993-02-01 This overview includes chapters on child mortality adult mortality fertility proximate determinants marriage internal migration international migration and the demographic impact of AIDS

Africa's Demographic Transition David Canning, Sangeeta Raja, Abdo S. Yazbeck, 2015-10-22 Africa is poised on the edge of a potential takeoff to sustained economic growth This takeoff can be abetted by a demographic dividend from the changes in population age structure Declines in child mortality followed by declines in fertility produce a bulge generation and a large number of working age people giving a boost to the economy In the short run lower fertility leads to lower youth dependency rates and greater female labor force participation outside the home Smaller family sizes also mean more resources to invest in the health and education per child boosting worker productivity In the long run increased life spans from health improvements mean that this large high earning cohort will also want to save for retirement creating higher savings and investments leading to further productivity gains Two things are required for the demographic dividend to generate an African economic takeoff The first is to speed up the fertility decline that is currently slow or stalled in many countries The second is economic policies that take advantage of the opportunity offered by demography While demographic change can

produce more and high quality workers this potential workforce needs to be productively employed if Africa is to reap the dividend However once underway the relationship between demographic change and human development works in both directions creating a virtuous cycle that can accelerate fertility decline social development and economic growth Empirical evidence points to three key factors for speeding the fertility transition child health female education and women s empowerment particularly through access to family planning Harnessing the dividend requires job creation for the large youth cohorts entering working age and encouraging foreign investment until domestic savings and investment increase The appropriate mix of policies in each country depends on their stage of the demographic transition

Infections and Population Change in Africa Michel Caraël, Judith Glynn, 2008-08-12 Forty years ago the age old battle against infectious diseases as a major threat to human health was believed close to being won However by the late twentieth century the increase of emerging and reemerging infectious diseases was evident in both low and high income countries About 30 new infectious diseases have been identified in the last 20 years Among the new diseases and most importantly the Human Immunodeficiency Virus HIV epidemic with 40 million persons infected and 25 million deaths since its first description presents one of the most significant health societal and security challenges facing the global community The interaction of HIV AIDS with tuberculosis malaria and bacterial infections have increased HIV related morbidity and mortality and in turn the HIV pandemic has brought about devastating increases in tuberculosis Understanding the population impact and the dynamics of infection diseases in the most affected region is critical to efforts to reduce the morbidity and mortality of such infections and for decisions on where to use limited resources in the fight against infections This book aims to contribute to these efforts by offering a demographic and epidemiological perspective on emerging and reemerging infections in sub Saharan Africa *International Handbook of Population Policies* John F. The Oxford Handbook of Africa and Economics Célestin Monga, Justin Yifu Lin, 2015-07-02 A popular myth about the travails of Africa holds that the continent's long history of poor economic performance reflects the inability of its leaders and policymakers to fulfill the long list of preconditions to be met before sustained growth can be achieved These conditions are said to vary from the necessary quantity and quality of physical and human capital to the appropriate institutions and business environments While intellectually charming and often elegantly formulated that conventional wisdom is actually contradicted by historical evidence and common sense It also suggests a form of intellectual mimicry that posits a unique path to prosperity for all countries regardless of their level of development and economic structure In fact the argument underlining that reasoning is tautological and the policy prescriptions derived from it are fatally teleological low income countries are by definition those where such ingredients are missing None of today's high income countries started its growth process with the required and complete list of growth ingredients Unless one truly

believes that the continent of Africa and most developing countries are ruled predominantly if not exclusively by plutocrats with a high propensity for sadomasochism the conventional view must be re examined debated and questioned This volume the second of the IOxford Handbook of Africa and Economics reassesses the economic policies and practices observed across the continent since independence It offers a collection of analyses by some of the leading economists and development thinkers of our time and reflects a wide range of perspectives and viewpoints Africa s emergence as a potential economic powerhouse in the years and decades ahead amply justifies the scope and ambition of the book

New Landscapes of Population Change Adele M. Hayutin,2022-12-01 Demographic forces declining populations in many countries and surging populations in others aging societies and shrinking workforces have national regional and global reverberations Behind many

of today's news headlines lie critical challenges rooted in worldwide demographic upheaval with important implications for our future. *New Landscapes of Population Change* demonstrates how fertility, life expectancy, and migration—the key demographic drivers—interact to shape this future. Hayutin takes readers on a demographic world tour, focusing her analysis on key regions and countries: the largest economies, selected emerging economies, fast-growing populations, and major political hot spots that will drive pivotal conversations in the decades ahead. More than 100 compelling and easy-to-read charts illustrate striking comparisons that will help readers develop a comprehensive understanding of how demographics will influence economic security and political stability through the end of our century. *Regional Economic Outlook, April 2015, Sub-Saharan Africa* International Monetary Fund, African Dept., 2015-04-28. The sharp decline in oil and other commodity prices have adversely impacted sub-Saharan Africa. Nevertheless, the region is projected to register another year of solid economic performance. In South Africa, however, growth is expected to remain lackluster, while in Guinea, Liberia, and Sierra Leone, the Ebola outbreak continues to exact a heavy economic and social toll. This report also considers how sub-Saharan Africa can harness the demographic dividend from an unprecedented increase in the working-age population, as well as the strength of the region's integration into global value chains. *Africa Toward 2030* E. Lundsgaarde, 2011-11-11. Combining studies of demography, climate change, technology, and innovation, political development, new actors in international development, and global governance frameworks, this book highlights the major underlying determinants of change in the African context and key uncertainties about the continent's future development prospects. *Bibliographie Mensuelle. Africa Rising Mr. Paulo Drummond, Vimal Thakoor, Shu Yu, 2014-08-05. Africa will account for 80 percent of the projected 4 billion increase in the global population by 2100. The accompanying increase in its working-age population creates a window of opportunity which, if properly harnessed, can translate into higher growth and yield a demographic dividend. We quantify the potential demographic dividend based on the experience of other regions. The dividend will vary across countries depending on such factors as the initial working-age population, as well as the speed and magnitude of demographic transition. It will be critical to ensure that the right supportive policies, including those fostering human capital accumulation and job creation, are in place to translate this opportunity into concrete economic growth.
